- Notes:
1. Estimates made for months with missing data in 1980 to 1983 period.
 2. Catches of other species not listed e.g., greenling, crab.
 3. Reader should focus on trends as survey procedures are not necessarily consistent over the time period.
 4. The five months – May through September - generally comprise over 80% of the annual effort and catches of coho, pink, sockeye, rockfish, and lingcod; 70 to 80% of annual chinook catches; but less than half of annual chum catches.
 5. Catch and effort is boat-based activity only i.e., excludes activity from shore, piers, etc.
