

### Weight Limits

All public highways are classified according to the following weight categories:

#### Primary Weights:

The primary highways are shown on the map. Most of these are allowed primary weights year round.

A smaller group reverts to secondary weight levels during May and June when the highways are in their weakest condition.

#### Secondary and Municipal Weights:

Secondary highways include all provincial highways and provincial roads shown on the Official Highway Map other than those designated as primary.

Municipal highways include public highways other than provincial highways and provincial roads. Generally, this includes all roads maintained by Saskatchewan's rural municipalities including the 600 and 700 series roads which are shown on the Official Highway Map.

#### Other:

These highways have bridge limited gross vehicle weights.

These provincial highways are not allowed "winter weights".

#### Year-round Restricted Weights:

Certain highways have maximum gross weights regardless of their classification, the vehicle configuration or the time of year. Weight restricted secondary highways are limited to 41 500 kg.

#### Winter Weight Exceptions:

Winter weights do not apply on the following highways:

- Highway No. 106 - junction No. 135 to Manitoba Border;
- Highway No. 201 - junction No. 1 to junction No. 247;
- Highway No. 312 - Jct. No. 11 to Jct. No. 225; and
- Provincial Roads Nos. 919, 927 and 943
