### FORM 3 [Subsection 9(3)]

#### Job Related Physical Test

"The Police Officer's Physical Abilities Test is a job-related physical test that approximates the physical activity performed by police officers. The test has been developed as a result of observations respecting the level of physical fitness actually required to fulfil a police officer's responsibilities.

Following the explanation of each of the test stations candidates must be given every opportunity and sufficient time to practise each of the stations and inclusive activities to their level of competence and confidence. Usually 15 to 30 minutes allows sufficient time for a group of 20 or so candidates to acquire the necessary experience to complete the test.

The test stations must be organized in accordance with the Appendix to this Form.

The test has been completed successfully only if the timed portion of the test is completed within 4 minutes 45 seconds or less and the weight has been carried in a controlled manner 15.24 metres (50 feet) and returned to the floor.

#### STATION 1 ¼ Mile Mobility/Agility Run (402.43 metres)

On the command GO, the candidate completes the mobility run course as quickly as possible (six trips = \( \frac{1}{4} \) mile) (402.43 metres).

- (a) On the command GO, the candidate must run to the outside of marker 1 which is placed 6 metres out and 3 metres to the left of the centre start position;
- (b) Proceeding from outside marker 1, the candidate must run diagonally across the course and jump the 1.83 metre (6 foot) mat obstacle while running. On landing from the jump he/she continues to run around the outside of the second marker placed 12 metres (40 feet) out from the centre start position and 3 metres (10 feet) to the right of the centre line;
- (c) The candidate then runs to the stair obstacle, the centre of which is placed on the centre line 18 metres (60 feet) from the start line. The candidate runs up, over and down the stairs, in any manner, as quickly as possible and proceeds to marker 3 at the outer end of the course 24 metres (80 feet) from the start line;
- (d) Having run to the end marker placed on the centre line 24 metres (80 feet) from the start marker, the candidate then runs around the outside of the marker turning sharply to run back over the stairs and on to marker 4;
- (e) Marker 4 is placed opposite marker 2 and in line with marker 1. The candidate runs around the outside of the marker turning to run diagonally across the course and jumping two short obstacles (bars) 45.5 centimetres in height and placed across two pairs of chairs (about 3 metres apart). The candidate continues to run around marker 5 placed opposite marker 1 and in line with marker 2 and then outside of the start marker to enter the course a second time;

- (f) The candidate must successfully complete six laps of this course prior to proceeding to STATION 2;
- (g) Should the candidate not clearly jump the mat, he/she must redo the jump prior to going onto the stairs. Further, should the candidate knock a stick off the chairs he/she must stop and replace the stick prior to moving on to complete the course. The candidate must run to the outside of all markers and replace all markers that are displaced during the run.

#### STATION 2a Pull Activity – 36.36 kg (80 lbs.)

Immediately following the running of the mobility course the candidate must run around the outside of the start marker and proceed to the pull activity station 36.36 kg (80 lbs.).

- (a) At the pull station the candidate picks up the rope which is attached by cable over a pulley to an 36.36 kg (80-lb.) weight. The candidate pulls on the rope until the 36.36 kg (80-lb.) weight is off the floor;
- (b) While maintaining a balanced position, and with the arms bent at the elbow, the candidate must move from one side of the weight to the other (i.e. describe a 180 degree arc) while keeping the weight off of the floor;
- (c) The candidate must complete six arcs touching the floor at the horizontal line of the weight three times on each side of the weight;
- (d) Should the candidate allow the weight to touch the floor while moving though this activity he/she must start this station over until six arcs have been successfully completed without the weight recontacting the floor (mat). The candidate's arms must not straighten to ensure the demonstration of required shoulder girdle strength. Repeat the activity until six successful arcs have been completed;
- (e) This station has been designed to be completed comfortably within 15 seconds. Following the last line touch, the candidate may drop the weight to the floor and proceed to the push station.

#### STATION 2b Push Activity—36.36 kg (80 lbs)

At the push activity station the candidate steps between the push handles, picks them up and holds them at a comfortable position in front of his/her chest/waist. The handles are constructed of solid material to ensure that the hands and arms do not cross the chest ensuring that the candidate is demonstrating shoulder girdle strength. The elbows must drop behind the line of the body so as to allow the handles to rest on the shoulder area with the elbows fully flexed. The total combined time recommended for the pull and push activity is 30 seconds.

(a) While holding the arms in an acceptable position, the candidate pushes the weight, attached by cables to the push handles, off the floor and keeps it off the floor (mat) as he/she moves through six arcs, touching each line (horizontal to the weight position) three times as in the successful performance of the pull station;

- (b) As in the pull station, the weight can not touch the floor (mat) throughout the performance of the push activity;
- (c) Six arcs must be completed without the weight being allowed to touch the floor (eg. if the weight touches during the second arc, the next line touch would again be number 1). Following the sixth line touch, the handles are dropped to the mat and the candidate moves quickly to the modified squat thrust and stand station (station 3).

#### STATION 3 Modified Squat Thrust and Stand Station and Rail Vault

On arrival at the modified squat thrust and stand station the candidate immediately begins the activity. The activity is designed to take approximately one minute. A 91.44 cm (3-foot) rail (vault apparatus) is placed on (between) two 2.44 metre (8 foot) mats so that following each rail vault the candidate lands on a mat.

- (a) From a standing position the candidate bends down and places the hands on the mat in front of the feet. From this position the feet are thrust out to the rear, the arms are bent at the elbows and the chest is placed on the mat. Once the chest has touched the mat the body is pushed up and the legs and feet are co-ordinatively brought back under the body (demonstrating functional ranges of flexibility) as the person stands erect and places the hands on the rail (either in front of or behind the body) readying him/herself for the rail vault. The candidate is not allowed to grasp the rail for the purposes of assisting him/herself to the standing position;
- (b) With the hands being the only part of the body touching the rail, the candidate vaults the rail and lands in an upright standing position on the opposite side of the rail on the mat;
- (c) Following his/her landing on the other side of the rail, the candidate completes a reverse squat thrust and stand by bending the knees and body to place the hands behind the feet and to the side and sits down on the mat. The arms and legs are extended as the shoulder blades (upper back) touch the mat. The position of the legs is not important. Immediately on the shoulder blades touching the mat, the candidate regains the seated position on the mat rolling onto the feet without allowing the body to turn to the side (demonstrating functional ranges of flexibility), and stands erect again not allowing the hands to grasp the rail until the standing position is gained;
- (d) With the rail again beside the candidate, the candidate grasps the rail in the preferred position and again vaults the rail without touching the rail with any part of the body other than the hands and lands in the erect balanced position on the other side of the mat. Once this position has been demonstrated the candidate immediately completes the squat thrust and stand activity to the chest as previously described;
- (e) The squat thrust and stand and rail vault activity is continued, alternating between front and back squat thrust and stand positions until 10 repetitions (5 to the front and 5 to the back each interrupted by a rail vault following the first chest related activity) have been completed;

(f) Should an error be committed during an activity in this station, that activity must be repeated until demonstrated successfully. If the person uses the hands to pull him/herself up from the sitting position, for example, he/she must repeat the activity again. Similarly, should the foot be placed on the rail to assist in the rail vault or if the candidate lies on the rail rolling over it rather than vaulting it—demonstrating insufficient shoulder girdle and back strength in co-ordination with sufficient leg power to perform the activity, the vault must be repeated.

#### TIME PORTION OF THE POPAT COMPLETED

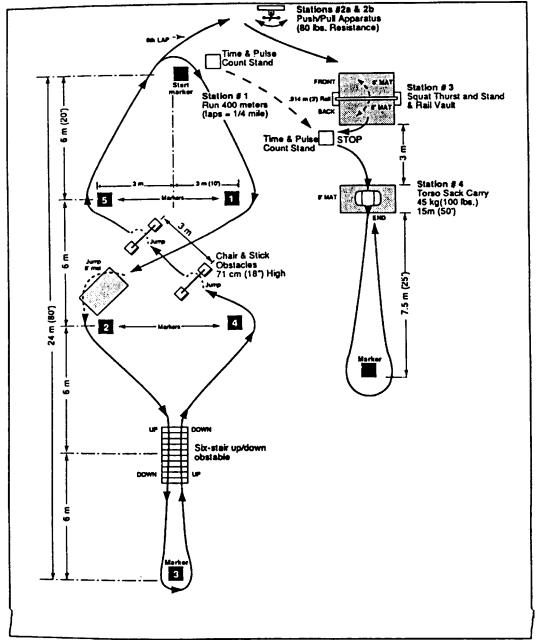

Immediately on regaining the standing position from the last squat thrust and stand to the back, time is recorded to the nearest second. Immediately following the record of time (within five seconds) the candidate's heart rate is taken for a period of 10 seconds. The only purpose of the heart rate record is to reflect on the level of work performed by the candidate associated with their time to completion of the critical suspect control phase of the POPAT.

#### STATION 4 Weight Carry—45.36 kg (100 lbs.)

Once the time and heart rate have been recorded (eg. within 30 seconds) the candidate should pick up the 45.36 kg (100-lb.) torso sack in a careful and safe manner and carry the sack, while holding it in front of the body, out around the marker placed 7.62 metres (25 feet) away and bring it back and place it on the floor under control. The torso sack must be carried with two hands/arms holding the sack and may not be placed on a hip or a shoulder. It may be picked up in any fashion.
