## November Estimate of 2006 Crop Production

Statistics Canada's November production survey of principal field crops estimates 2006 Saskatchewan production at 25.59 million tonnes. The survey contains estimates of producers' seeded area, harvested area, expected yield and production for field crops as of November 2006. All estimates are reported on a "field run" basis, with no reductions for dockage, moisture, or spoilage. The survey was conducted from October 27 to November 20.

**Total wheat** production is estimated at 12.48 million tonnes - up 702 400 tonnes from the September survey, and 1% above the 1996-2005 average. Spring wheat production is estimated at 9.08 million tonnes, up 5% from 2005, and 8% above the 10-year average. Durum production is estimated at 3.13 million tonnes, down 36% from 2005, and 17% below the 10-year average. Prairie Spring, Extra Strong, Soft White and other wheat classes made up 830 500 tonnes or 9% of the spring wheat production.

**Coarse grain** output is estimated at 5.13 million tonnes – down 2% from the September survey and 15% below the 1996-2005 average. Barley production is estimated at 3.47 million tonnes compared to 5.35 million tonnes last year, and 23% below the 1996-2005 average. Oats production is estimated at 1.53 million tonnes, down 9% compared to 2005, and 7% above the 10-year average. Rye production is estimated at 0.13 million tonnes, down 27% from 2005, and 12% above the 10-year average.

**Oilseed** production is estimated at 4.77 million tonnes – up 392 000 tonnes from the September survey and 35% above the 1996-2005 average. Production of canola is estimated at 3.96 million tonnes compared to 4.63 million tonnes of production in 2005. Flax production is estimated at 805 thousand tonnes compared to 881 thousand tonnes in 2005.

**Pulse** crops production is estimated at 2.98 million tonnes – up 132 900 tonnes from the September survey and 25% above the 1996-2005 average. Pea production is estimated at 2.17 million tonnes compared to 2.41 million tonnes of production in 2005. Lentil production is estimated at 692 thousand tonnes compared to 1.26 million tonnes of production in 2005. Chickpea production is estimated at 159 thousand tonnes compared to 84 thousand tonnes of production in 2005.

**Mustard** production is estimated at 90 thousand tonnes – 47% below 2005 production, and 51% below the 10-year average.

**Canary seed** production decreased 49% from 2005 to an estimated 113 thousand tonnes.

On the Prairies, farmers reported declines in production of canola, flax, and, especially, durum wheat. Mid- and late-season hot and dry weather tempered canola yields. A decline in spring wheat yields was more than offset by an increase in harvested area.
