

# Public Notice

Saskatchewan Environment has found elevated levels of Dioxins and Furans in the berm located north of the Woodland SIAST campus.

As a precautionary measure the City of Prince Albert has agreed to temporarily fence the berm to restrict public access while the department evaluates the options for cleaning up the site.

At this time it is thought that the potential health risks are low. However, until additional research is conducted and the site is remediated we are asking people to avoid contact with the berm and in particular to restrict their children from playing on the berm.
