FOREWORD

The first National Conference on Apprenticeship in Trades and Industries, held in Ottawa in 1952, recommended that the federal government be requested to co-operate with provincial apprenticeship committees and officials in preparing analyses of a number of skilled occupations. To this end, Human Resources Development Canada sponsors a program, under the guidance of the Canadian Council of Directors of Apprenticeship (CCDA), to develop a series of analyses.

The Occupational Analysis Program has the following objectives:

- to identify and group the tasks performed by skilled workers in particular occupations;
- to identify those tasks that are performed by skilled workers in every province and territory;
- to develop instruments for use in the preparation of interprovincial standard ARed Seal@ examinations and curricula for training leading to the certification of skilled workers;
- to facilitate the mobility, in Canada, of trainees and skilled workers; and
- to supply employers and employees, and their associations, industries, training institutions and governments with analyses of the tasks performed in particular occupations.

GUIDE TO ANALYSIS

DEVELOPMENT OF ANALYSIS

A draft analysis is developed by a knowledgeable consultant who, with the assistance of a committee of industry experts in the field, identifies all the tasks performed in the occupation.

The draft is then assigned to occupational analysts at Human Resources Development Canada for translation and then returned to the consultant for review to ensure conformity with the nationally approved format.

The consultant will then forward a copy of this analysis to provincial/territorial authorities for validation by specialists in the field. Their recommendations are assessed and incorporated into the final draft which also includes the identification of the common core tasks performed in the occupation.

The occupational analysis is published in both official languages.

STRUCTURE OF ANALYSIS

To facilitate the understanding of the nature of the occupation, the work performed is divided into the following divisions:

- A. **BLOCK** - is the largest division within the analysis and reflects a distinct operation relevant to the occupation.
- B. **TASK** - is the distinct activity that, combined with others, makes up the logical and necessary steps the worker is required to perform to complete a specific assignment within a "BLOCK".
- C. **SUB-TASK** - is the smallest division into which it is practical to subdivide any work activity and, combined with others, fully describes all duties constituting a "TASK".

Supporting Knowledge and Abilities

The element of skill and knowledge that an individual must acquire to adequately perform the task is identified under this heading.

Trends

Any shifts or changes in technology which affects the block are identified under this heading.

Related Components

All components of a specified task being undertaken by the painter and decorator are identified under this heading.

Tools & Equipment

All tools and equipment necessary for the painter and decorator to complete a task are identified under this heading.

VALIDATION METHOD

At the request of the Canadian Council of Directors of Apprenticeship (CCDA), the Standardization SubCommittee developed a method for the validation of the national Red Seal occupational analyses.

A draft of the analysis is sent to all provinces/territories for validation. Each jurisdiction rates the sub-tasks and applies percentage ratings to blocks and tasks. This method for the validation of the national occupational analyses identifies common core tasks across Canada for a specific occupation. This feature facilitates the weighting of the Interprovincial Red Seal examinations.

DEFINITIONS

| | |
|-----------------|--|
| YES: | the sub-task is performed by workers in the occupation in a specific jurisdiction. |
| NO: | the sub-task is not performed by workers in the occupation in a specific jurisdiction. |
| BLOCK %: | the average number of questions (items), derived from the collective decision made by workers within the occupation from all areas of Canada, which will be placed on an interprovincial examination to assess each block of the analysis. |
| TASK %: | the average number of questions (items), derived from the collective decision made by workers within the occupation from all areas of Canada, which will be placed on an interprovincial examination to assess each task of the analysis. |
| NV: | <u>N</u> ot <u>V</u> alidated by a province/territory. |
| ND: | <u>N</u> ot <u>D</u> esignated in a province/territory. |

PROVINCIAL/TERRITORIAL ABBREVIATIONS

| | |

COMMON CORE

The criteria for determining common core are dependant on the performance of sub-tasks. If 70 percent of the responding jurisdictions (excluding NVs and NDs) perform the sub-task, it shall be considered common core.

Interprovincial Red Seal examinations are based on the common core identified through this validation process. This process identifies what will be assessed through the interprovincial examination.

BLOCKS AND TASKS WEIGHTING (APPENDIX "B")

This appendix represents the blocks and task percentages as submitted by each jurisdiction.

Each jurisdiction, with the use of a provincial/territorial occupational advisory committee, validates the content, places percentages on blocks and tasks, and indicates whether or not the sub-tasks are performed by the skilled workers within the occupation. The results of this exercise are submitted to the consultant who then analyzes the data and develops this appendix which provides the individual jurisdictional validation results as well as the national averages of all responses.

PIE CHART (APPENDIX "C")

The graph depicts the national percentages assigned to blocks in the analysis.

SCOPE OF THE PAINTER AND DECORATOR OCCUPATION

The title "Painter and Decorator" defines a person who, because of his or her knowledge, training and abilities, is capable of applying decorative and/or protective finishes to a wide variety of materials in residential, commercial, institutional and industrial settings.

The painter and decorator has skills and experience in surface preparation and the application of a wide variety of decorative and protective finishes. The painter and decorator must also be able to calculate areas and relate such calculations to required material. The painter and decorator must have an eye for detail, an excellent sense of colour, the ability to plan work, and knowledge of many types of finishes, their properties and their application.

Most painters have a range of experience in residential and commercial work, and many have experience in the increasingly specialized area of industrial work as well. Many tradespeople in this profession also have broad experience with, and knowledge of, different types of finishes and processes which become more or less popular as architectural and other trends come and go.

Painters and decorators are often called upon to perform their jobs in potentially dangerous or difficult conditions. They work with hazardous materials, as well as some physical discomfort when preparing surfaces or applying coatings in awkward positions. They work with a variety of ladders, staging and scaffolding. Painters and decorators must have good physical endurance in order to accomplish tasks that require continuous exertion, such as sanding, scraping, and repetitive activities such as rolling and brushing. Painters and decorators must also be aware of customer relations, especially when redecorating existing structures.

Painters and decorators perform their duties in virtually every facet of construction and industry. This trade is important in the construction and maintenance of residential, commercial, institutional and industrial sites, in both urban and rural settings.

In some cases, a painter and decorator may work for years on a single site, such as a university campus, and during that time may be performing similar tasks constantly. At the same time, tradespeople who work for freelance contractors may rarely work on the same site more than once, and may routinely perform a tremendous variety of tasks using a wide range of materials and equipment.

OCCUPATIONAL OBSERVATIONS

The construction industry, as with all sectors of the economy, is experiencing new directions and rapid changes in line with the technological advancement that is prevalent today.

Basic computer skills are gradually becoming a necessary occupational skill. With computerized specifications, computerized colour matching and other computer applications, development of computer skills is becoming important in some areas of the occupation.

During the development of this national occupational analysis, it was recognized that numerous trends are emerging from within the painting and decorating occupation. New materials and application methods are becoming an everyday occurrence. The continuous development of new product is a direct result of manufacturers' efforts to produce more environmentally and user friendly products.

Environmental awareness, cost effectiveness and waste control are issues at the forefront of establishing new methods in the industry. Recycling of solvents, paints and other products is a clear example of these new directions.

It is clear that an integral part of the occupation combines not only the traditional methods of applying materials, but also must incorporate the new skills and methods emerging due to the demand for more sophisticated finishes.

There is a greater awareness of safety issues, and most painters and decorators now hold a safety certificate; in some jurisdictions it is mandatory.

Training and retraining is becoming an issue within the occupation. Pre-apprentice training is rare in Canadian community colleges, and many new entrants to the field do not register as apprentices or obtain their red seal. Journeypersons report that upgrading is equally difficult to access.

SAFETY

Safe working procedures and conditions, accident prevention and the preservation of health are of primary importance to industry in Canada. These responsibilities are shared and require the joint efforts of government, employers and employees. It is imperative that all parties become aware of circumstances which may lead to injury or harm. Safe learning experiences and environments can be created by controlling the variables and behaviours that may contribute to an accident or injury.

It is generally recognized that a safety-conscious attitude and work practices contribute to a healthy, safe and accident-free working environment.

It is imperative to apply and be familiar with the Occupational Health and Safety Act and Regulations, and the health and safety code for the construction industry. As well, it's essential to determine workplace hazards and take measures to protect oneself, co-workers, the public and the environment.

As safety education is an integral part of training in all jurisdictions, personal safety practices are not recorded in this document. However, the technical safety aspects relating to each task and sub-task are included throughout this analysis.

APPENDICES

TOOLS AND EQUIPMENT

Painter and decorators generally supply their own hand tools, boots, coveralls and gloves. Safety items such as hard hats, eye, ear, and lung protection, and most tools, especially the more expensive tools and equipment, are usually the responsibility of the employer.

Brushes and rollers, as well as some of the power tools and equipment listed below, are usually made available on the work site. Resource materials, such as manufacturers= specifications and manuals, log books, blueprints and engineers= specifications are usually supplied by the employer and made available to the painter and decorator on the work site.

Common Tools

| | |
|--|-----------------------|
| adjustable wrenches (various sizes) | pencils |
| apron | pliers |
| broad knife | plumb bob |
| brush and roller spinner | putty knife |
| brush extender | rags |
| brushes (various types of natural and synthetic bristle brushes) | razor blade |
| can hook | roller cage |
| caulking gun | roller grids |
| chalk line | rollers |
| chamois leather | sanders (pole, hand) |
| cheesecloth | sanding block |
| cutters | sandpaper |
| drop sheets | scrapers |
| dust brush | screwdrivers |
| dust pan | sea sponges |
| dusters | shears |
| extension poles | shovel |
