### **Published under the authority of:**

Honourable Loyola Sullivan

Minister of Finance and President of Treasury Board

*Trends and Usage of Employment Insurance (EI) in Newfoundland and Labrador gives a statistical overview of past and current trends in Program usage in the Province. Since Confederation, when the Unemployment Insurance (UI) Program was introduced, UI/EI programs have played a role in the Province's labour markets. Historically many workers enter and exit the program as seasonal work begins and ends each year. As a result, UI/EI data provide useful information regarding the situation and events in the labour market and economy.*

*Since 1990, the Province's economy has experienced a recession, a collapse of the ground fishery, high levels of, as well as declining, out-migration and an economic recovery with some of the highest levels of performance recorded in Canada. All these have impacted UI/EI usage and are reflected in statistical trends found in the data. The purpose of this brief document is to provide statistics on major trends since the early 1990s to 2004 (most recent reliable data). While the report is not an "analytical" document, it provides information regarding labour market and economic performance and aspects of the dynamics of our economy that relate to E.I. usage in the province. It is intended to provide data for input to analysis that might be carried out to explore issues reflected by the data.*

seasonal patterns

**Chart 2**

Newfoundland and Labrador Statistics Agency:  
Special Tabulation

## The Rise and Fall of EI

Employment Insurance (EI) usage peaked in the early 1990s at an annual average of approximately 80,000 beneficiaries.<sup>1</sup> The number of claimants rose steadily throughout the 1980s. Since the mid-1990s usage had declined to 1980 levels.

The strong growth in the number of claimants during the 1980s mirrored growth in employment. As more individuals, especially women, entered the labour force in primarily seasonal occupations, the number of individuals who were able to access UI increased.

A downturn in the Economy in the early 1990s, the groundfish crisis, out-migration and tightening of EI regulations throughout the 1990s have caused the number of claimants to decline dramatically. The increase in full time employment in recent years has also contributed to a leveling off in EI usage.

## EI Usage is Seasonal

The seasonal pattern of EI usage is consistent with labour market activity. Most claims are initiated in the fall of the year as many seasonal jobs begin to wind down. In 1992, 48% of total claims initiated in this Province were started between September and December. The comparable figure for 2004 is 53%.

<sup>1</sup> Prior to 1996, this program was called Unemployment Insurance (UI). Throughout this report, references to Employment Insurance (EI) prior to 1996 are to be interpreted as being the same program.

# Employment Insurance

## trends and usage in Newfoundland and Labrador

### 100,000+ Individuals Use EI Annually

The number of different people who access the program for some period of time during the year is over 100,000, significantly higher than the monthly average. This figure had peaked at nearly 156,000 in 1992, but since major reform of the program in 1996, it has remained between 103,000 and 110,000 people.

### EI beneficiaries

Chart 3

*Annual T4U and T4E counts.  
Statistics Canada, Labour Division  
and Small Area Administrative Data Division*

### Many EI Beneficiaries are Frequent Users

Approximately two-thirds (67%) of all EI beneficiaries between 2000 and 2004 had more than one claim. 50% had three or more claims in the 5-year period; 30% claimed benefits on five or more occasions. While there is no standard definition of what constitutes a frequent user, it is generally accepted that individuals with three or more claims in a 5-year period are considered frequent users. The proportion of frequent users has changed little from the 1992-96 pre-reform period (46% to 50%), however those individuals with 5 or more claims increased from 22% to 30%. The increase in this category is largely due to the 1996 EI reforms which enabled many fish harvesters to collect benefits on more than one claim in a single year (see "Fish Harvesters" section later in this report for more detail).

### frequent users

Chart 4

# Employment Insurance

## trends and usage in Newfoundland and Labrador

### EI Client Likelihood of Frequent Use\* Newfoundland and Labrador

- Males - 57%
- Females - 41%
  
- Age 35 or more - 60%
- Less than age 35 - 33%
  
- Work in goods producing occupations - 66%
- Work in service type occupations - 32%
  
- Live in rural location - 60%
- Live in urban location - 32%

\* *Frequent Use - 3 or more claims in 5-year period*

### claimant profile

**Table 1**

*Newfoundland and Labrador Statistics Agency:  
Special Tabulation*

Table 1 shows a profile of the types of EI clients who are frequent users in this province for the period 2000-2004. For example, the table shows that if you are a male EI client, there is a 57% likelihood that you are a frequent user; for females, the likelihood is 41%.

# Employment Insurance

## trends and usage in Newfoundland and Labrador

### Total EI Income is Down From Early 1990s

The amount of funds entering the economy through EI benefits is significant. In 2004, \$903 million in EI related benefits was paid to individuals in the Province. \$572 million was paid to regular beneficiaries, \$146 million was paid through fishing type claims and \$185 million in other EI benefits.<sup>2</sup> The total figure is down from 1992 when nearly \$1.1 billion in total benefits was paid.

### annual benefits

**Chart 5**

*Statistics Canada, 73-001 and CANSIM Matrix # 005705*

### Proportionally, Female EI Usage has Declined More Than Males

While the increase in EI usage in the 1980s was primarily due to more females accessing the program, the decline since 1992 shows a higher percentage decline for females. Between 1992 and 2004, the number of males receiving regular benefits has dropped by 27,500 (34%); females have declined by 25,700 (42%).

### by gender

**Number of Regular EI Beneficiaries by Age  
Newfoundland and Labrador, 1992 and 2004**

### by age

**Chart 7**

*Newfoundland and Labrador Statistics Agency:  
Special Tabulation*

### Large Decline in the Number of Younger Claimants

Out-migration, an aging of the population, increased employment opportunities, increased enrolment in educational institutions and tightening EI entrance requirements during the 1990s have contributed significantly to the reduction in the number of younger people who access the program. In 1992, 52% of regular beneficiaries were less than age 35; only 34% of beneficiaries were under 35 in 2004.

The younger the age, the larger has been the decline; the number of individuals less than 25 has declined by 62%, 25-29 by 59%, 30-34 by 55%. In 1992, half of all regular beneficiaries were age 34 or less; in 2004, the median age has increased by seven years to age 41.

**Number of Regular Beneficiaries by Occupation Type  
Newfoundland and Labrador, 1992 and 2004**

	1992	2004	Change	% Change
Managerial and Other Professional	19,140	14,120	(5,020)	-26
Clerical	11,490	4,860	(6,630)	-58

Other Primary	4,190	4,810	630	15
<b>Total</b>	<b>140,640</b>	<b>87,690</b>	<b>(52,950)</b>	<b>-38</b>

### by occupation \*

**Table 2**

*Newfoundland and Labrador Statistics Agency:  
Special Tabulation*

### Large Decline in EI Claimants in Almost All Sectors

With the exception of Other Primary, there has been a decline in regular beneficiaries in all occupation types since 1992. The largest proportional decline was for clerical workers which have dropped 58% since 1992. Benefits for construction workers have also significantly declined by 57%. The only other occupation near 1992 levels of EI usage is fish harvesters (shown in a later table).

\* Excludes those employed as fish harvesters.

# Employment Insurance

## trends and usage in Newfoundland and Labrador

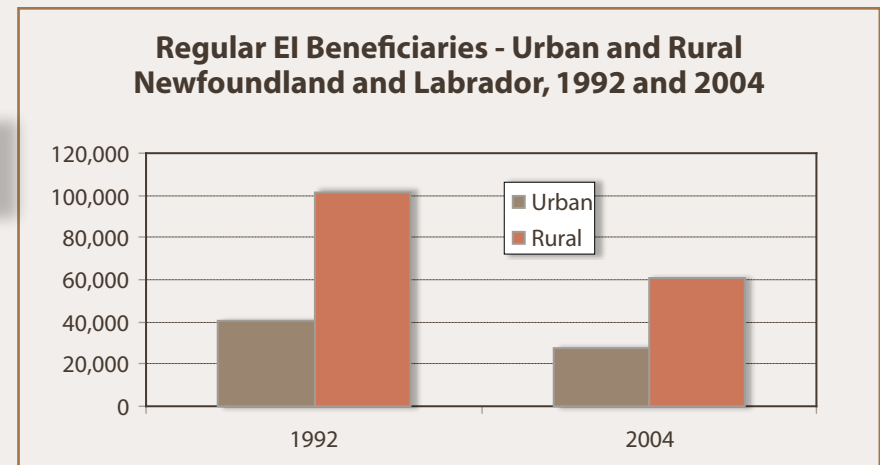

### Declining EI Usage is Higher in Rural Areas

The proportional decline in EI usage over the period for rural and urban regions<sup>3</sup> was 40% and 32% respectively. Within both urban and rural areas, however, are regions or "pockets" which vary considerably from the average. The decline in beneficiaries may be for different reasons depending on location. In the past, evidence indicates that a decline in rural areas implies reduced employment opportunities while a decline in urban regions indicates that there are more jobs or longer duration employment available. Population decline in rural areas is also a likely significant factor in reduced EI usage.

### urban and rural

**Chart 8**

*Newfoundland and Labrador Statistics Agency:  
Special Tabulation*

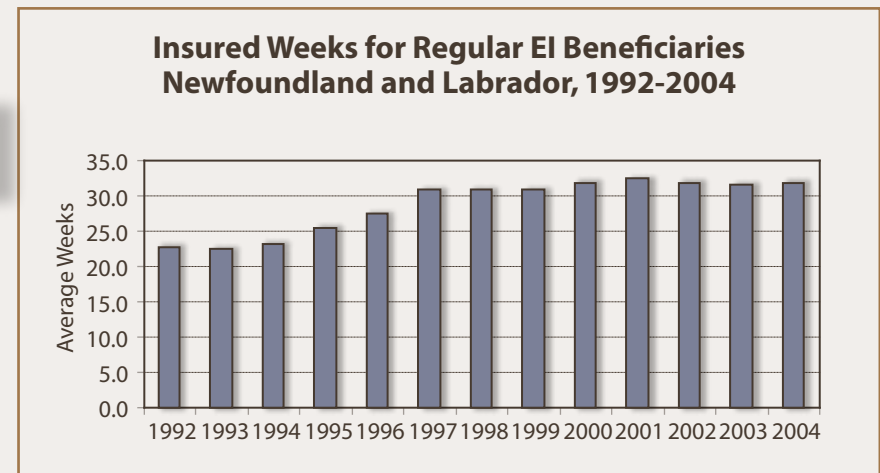

### Duration of Employment is Up Significantly Since Early 1990s

Individuals are now working longer before applying for EI. In 1992, the average number of weeks worked prior to applying for EI was 22.8 weeks. By 2004, this figure had increased by 9.0 weeks (or 39%) to 31.8.<sup>4</sup> Changing EI regulations which effect eligible benefit duration and benefit amounts, along with increased employment opportunities in recent years, have contributed to this trend.

### insured weeks

**Chart 9**

*Newfoundland and Labrador Statistics Agency:  
Special Tabulation*

<sup>3</sup> Urban and rural regions are based on Canada Post definition as of the 2002 postal code directory. See Appendix 1.

<sup>4</sup> In 1997 eligibility requirements for EI changed from hours to weeks. Above calculations assume 35 hours = 1 week for 1997 onward. Some individuals may not actually be working more or less individual weeks, but rather more or less hours per week.

# Employment Insurance

## trends and usage in Newfoundland and Labrador

**EI Benefit Weeks Paid to Regular Beneficiaries  
Newfoundland and Labrador, 1992-2004**

### duration

**Chart 10**

*Newfoundland and Labrador Statistics Agency:  
Special Tabulation*

## Duration of Claims is Down Since Early 1990s

The length of time people collect benefits has declined over the past decade. In 1992, the average number of annual benefit weeks paid to regular EI beneficiaries was 26.6 weeks. By 2004, this figure had declined by 4.0 weeks (or 15%) to 22.6. Changes to regulations in 1994 and again in 1996 which shortened the eligible duration of benefit periods is a contributing factor. Increased employment opportunities in recent years has also likely played a role.

**Average Benefits - Regular EI Beneficiaries  
Newfoundland and Labrador, 1992 and 2004**

	1992	2004	Change	% Change
<b>Average Qualified Weekly Benefit</b>	\$245	\$287	\$42	17
<b>Median Qualified Weekly Benefit</b>	\$233	\$293	\$60	26
<b>Average Total Benefits Paid in Year</b>	<b>\$6,550</b>	<b>\$6,420</b>	<b>-\$130</b>	<b>-2</b>

### average paid

**Table 3**

*Newfoundland and Labrador Statistics Agency:  
Special Tabulation*

## Monthly Average Benefits Have Not Changed Significantly

While the average weekly benefit for which workers have qualified has increased, total benefits paid to individuals annually have changed little. Average qualified weekly benefits are up 17% and half of EI clients qualified for a 26% higher benefit in 2004 versus 1992. However, the average annual benefit amount paid to regular beneficiaries has decreased by 2% from \$6,550 in 1992 to \$6,420 in 2004. The shorter duration for which workers collect benefits accounts for most of the reduced annual amount.

# Employment Insurance

## trends and usage in Newfoundland and Labrador

### Income Security Benefits Paid to Individuals Remain High

Despite the reduction in EI use in recent years, total payments from UI/EI, NCARP/TAGS<sup>5</sup> and Social Assistance programs remain over one billion dollars. However, total amounts from these programs have declined since the early NCARP/TAGS period when benefits peaked at approximately \$1.4 billion.

### UI/EI, NCARP/TAGS and Social Assistance

Table 4

Program Clients and Benefits Paid Newfoundland and Labrador, 1991 to 2004							
	UI/EI		NCARP/TAGS		Social Assistance		Total

<sup>5</sup> NCARP - Northern Cod Adjustment and Recovery Program was a fisheries adjustment program designed to respond to the crisis in the Atlantic Groundfish industry. It was implemented in 1992 and replaced by TAGS (The Atlantic Groundfish Strategy) from 1994 to 1998. Despite its official end in September 1998, some individuals also received income from TAGS in 1999.

## Fish Harvesters

Trends for self-employed fish harvesters are different than those recorded for EI users in the rest of the economy. The moratorium on the Northern Cod fishery caused fishing EI usage to decline by nearly half between 1992 and 1993. As a result of the moratorium, the NCARP program was implemented in 1992 and later replaced by TAGS in 1994. Only after individuals began to exit TAGS in 1996 to its termination in 1998, did the number of beneficiaries begin to climb.

In 1991, there were 11,960 individuals who opened a fishing type claim. By 1994 this figure had dropped to 6,430 but had climbed to 12,290 by 2004.

## Benefits Paid at Highest Levels in 2002

The amount of benefits paid to individuals with fishing type claims was at its highest annual level ever in 2003 at \$179.7 million.<sup>6</sup> This is \$81.6 million more than was paid in 1991, prior to the moratorium; a 83% increase. This figure declined to \$145.6 million in 2004.

The increase in benefits can be attributed to a number of factors which affect eligible benefit amounts such as higher incomes in the fishery, as a result of higher-valued shellfish species like

<sup>6</sup> Figure includes additional benefits paid to some fish harvesters through HRDC's anti-dating provision, which allowed some individuals to be paid retroactive benefits for EI eligibility prior to 2004.

# Employment Insurance

## trends and usage in Newfoundland and Labrador

crab, as well as increased negotiated prices paid for other species. The 1997 changes to Fishing EI Regulations that allowed more harvesters to qualify for two claims a year if they had sufficient earnings has also been a factor.

Under the new EI program as it relates to fish harvesters, many more self-employed fish harvesters can qualify for two claims in the same calendar year than was the case under the old UI program.<sup>7</sup> In 1991, 2.4% of fish harvesters initiated a second fishing claim in the same year; in 2004, 45.9% initiated more than one claim. In occupations other than fishing, the average in 2004 was 2.8%.

The average annual benefit paid to fish harvesters has increased from \$7,630 in 1992 to \$10,150 in 2004.<sup>8</sup> The average paid to regular type claims was \$6,420 in 2004.

The number of younger individuals who collect fishing EI has declined, although the drop has not been as large as for other occupations. In 2004, 29% of individuals collecting fishing type EI were less than age 35. This is a drop of 12 percentage points from 1994 (41% to 29%); compared to regular claimants less than age 35, the decline was 18 percentage points (52% to 34%).

<sup>7</sup> A major change for fishing type claimants as a result of the 1996 EI reforms was that program access was now based on amount of earnings instead of weeks worked.

<sup>8</sup> Figure does not include benefits paid to some fish harvesters through HRDC's anti-dating provision in 2004.

# Employment Insurance

## data reference

This Section provides new detailed data relating to the EI program and its clients. Because EI data are derived from administrative files, special tabulations must be prepared to provide the data when they are requested. This can involve waiting times that are inconvenient to those who need the data quickly. The Reference is intended to eliminate waiting times for the majority of those who contact the Agency for EI data. The data in the Reference are presented in "look-up" tables that respond to most frequently asked questions. A list of other tables that can be provided upon request is provided in Appendix 2.

<sup>1</sup> The Employment Insurance data reported here includes only claims related to job loss and fishing activity. All other types of claims are excluded (maternity leave, sickness, parental/adoption, work sharing, job creation, training and self-employment). A small number (less than 0.3%) of individuals were excluded from table due to unreported gender.

## Occupation, Gender and Age Profile of Regular EI Beneficiaries Newfoundland and Labrador, 1992 & 2004<sup>1</sup>

<sup>1</sup> A small number (less than 0.3%) of individuals were excluded from the table due to unreported gender, age or occupation.

**DEFINITIONS:**

*N* - Number of cases.

*Mean* - total divided by number of cases.

*Median* - The value below (above) which 50% of total cases fall.

*SOURCE:* Newfoundland & Labrador Statistics Agency: Special Tabulation.

Occupation Type	Gender	Age	1992	2004	Change

## Occupation, Gender and Age Profile of Regular EI Beneficiaries<sup>1</sup> Newfoundland and Labrador, 1992 & 2004 Rural Areas Only<sup>2</sup>

<sup>1</sup> A small number (less than 0.3%) of individuals were excluded from the table due to unknown gender, age or occupation.

<sup>2</sup> Rural regions exclude the following: St. John's CMA, Carbonear, Gander, Grand Falls, Corner Brook, Stephenville and Labrador City.

### DEFINITIONS:

N - Number of cases.

Mean - total divided by number of cases.

Median - The value below (above) which 50% of total cases fall.

SOURCE: Newfoundland & Labrador Statistics Agency: Special Tabulation.

## Occupation, Gender and Average Benefit Rates of Regular EI Beneficiaries<sup>1</sup> Newfoundland and Labrador, 1992 & 2004

<sup>1</sup>A small number (less than 0.3%) of individuals were excluded from the table due to unknown gender or occupation. Figures may not add to total due to rounding and cell suppression (...).

### DEFINITIONS:

*N* - Number of cases.

Mean - total divided by number of cases.

Median - The value below (above) which 50% of total cases fall.

SOURCE: Newfoundland & Labrador Statistics Agency: Special Tabulation.

## Occupation, Gender and Average Benefit Rates of Regular EI Beneficiaries<sup>1</sup> Newfoundland and Labrador, 1992 & 2004 Rural Areas Only<sup>2</sup>

<sup>1</sup> A small number (less than 0.3%) of individuals were excluded from the table due to unknown gender or occupation. Figures may not add to total due to rounding and cell suppression (...).

<sup>2</sup> Rural regions exclude the following: St. John's CMA, Carbonear, Gander, Grand Falls, Corner Brook, Stephenville and Labrador City.

### DEFINITIONS:

*N* - Number of cases.

Mean - total divided by number of cases.

Median - The value below (above) which 50% of total cases fall.

SOURCE: Newfoundland & Labrador Statistics Agency: Special Tabulation.

## Occupation, Gender and Average Benefit Rates of Regular EI Beneficiaries<sup>1</sup> Newfoundland and Labrador, 1992 and 2004 Urban Areas Only<sup>2</sup>

<sup>1</sup> A small number (less than 0.3%) of individuals were excluded from the table due to unknown gender or occupation. Figures may not add to total due to rounding and cell suppression (...).

<sup>2</sup> Urban regions include the following: St. John's CMA, Carbonear, Gander, Grand Falls, Corner Brook, Stephenville and Labrador City.

### DEFINITIONS:

N - Number of cases.

Mean - total divided by number of cases.

Median - The value below (above) which 50% of total cases fall.

SOURCE: Newfoundland & Labrador Statistics Agency: Special Tabulation.

## Urban Centres in Labrador

Urban centres are based on the 2002 postal code directories.

## Employment Insurance Data Sources

### Newfoundland and Labrador Statistics Agency - Employment Insurance Program Data

Much of the income security related data used in this report were obtained from in-house data sources developed and maintained at the Newfoundland & Labrador Statistics Agency. The source of these are listed as “special tabulation” in the report.

### EI Data Tables Available by Special Request

- Date of birth (age)
- Gender
- Postal Code (sub-geographic location)
- Eligible weekly benefit rate
- Benefits paid
- Date of claim
- Claim type
- Insured hours/weeks
- Occupation type

The Department of Human Resources and Development Canada (HRDC) UI/EI data in this report came from databases created using data received from HRDC under a special data-sharing agreement. These NLSA databases contain data as far back as 1982.

### Statistics Canada - Employment Insurance Program Data

- Income beneficiaries by province, type of income benefit and sex, monthly, CANSIM II Table 276-0001
- Beneficiaries receiving regular benefits without reported earnings by province and age group, monthly, CANSIM II Table 276-0002
- Number of disqualifications and disentitlements by province and reason, monthly, CANSIM II Table 276-0003
- Claims received and allowed by province and type of claim, monthly, CANSIM II Table 276-0004
- Benefit payments by province and type of benefit, monthly, CANSIM II Table 276-0005
- Beneficiaries by province, 1996 census division and sex, monthly, CANSIM II Table 276-0006
- Earnings of employees contributing to employment insurance program by province and sex, annual, CANSIM II Table 276-0007
- Beneficiaries by province, census metropolitan areas, census agglomerations and sex, monthly, CANSIM II Table 276-0009
- Employees contributing and their contributions to employment insurance by province, age group and sex, annual, CANSIM II Table 276-0010
- Weeks paid by province and type of benefit, monthly, CANSIM II Table 276-0015
- Average weekly payments by province and type of benefit, monthly, CANSIM II Table 276-0016
