2001 Census: Collective dwellings

In the Census, a collective dwelling refers to a dwelling of a commercial, institutional or communal nature. Examples are lodging or rooming houses, hotels, motels, tourist homes, nursing homes, hospitals, staff residences, communal quarters, work camps, jails, missions, and group homes. It may be identified by a sign on the premises or by a census representative speaking with the person in charge, a resident, a neighbour, etc.

Classification of collective dwellings

Collective dwellings are classified by type as shown in Table 1 below. For the 2001 Census a new category, "Shelters", was added to the types of collective dwellings in order to potentially better identify the population in shelters. This category includes emergency or temporary accommodation for persons who may have no other usual place of residence, facilities for abused women/partners and their children, halfway houses and other shelters with some form of assistance. In previous censuses the shelter population was included as part of several broad categories of collectives.

The classification of collective dwellings during census enumeration has evolved over time and has become quite complex. Collectives such as YM/WCA, hostels, some motels, hotels and rooming houses may be multi-purpose in that they offer communal accommodation to the public, and they may also deliver shelter services. For example, the city of Toronto rents space in youth hostels, hotels, and motels to provide short term emergency accommodation. The Census classifies these types of collective dwellings as hotels, motels, rooming houses, etc.

Enumeration of population in collectives

The most basic purpose of the Census is to enumerate every person in Canada where he/she usually lives. Because of the nature of many collective dwellings, some individuals who were in a collective dwelling on Census Day were there temporarily and had a usual place of residence elsewhere. These persons were enumerated at their usual place of residence. However, residents of collective dwellings who had no other usual place of residence were enumerated at the collective dwelling.

Cautionary note re. data on the population in shelters

In view of the classification issues related to collective dwellings and the census concepts related to usual place of residence, care must be taken in interpreting the data on the census population enumerated in shelters. The census count of the population in shelters should not be interpreted as a count of the "homeless" since homeless persons may well have been enumerated in other types of collective dwellings e.g. hotels, motels, YM/YWCAs, etc. Furthermore, the census count of persons in places classified as shelters does not represent the total population of persons who slept in a shelter on Census Day, since in some cases persons temporarily residing in shelters would have been enumerated at their usual place of residence.

Table 1 gives counts of the population in collective dwellings by type of collective dwelling for Canada, provinces and territories, 2001.

Table 2 shows the population in shelters by age and sex for Canada, provinces, territories, census metropolitan areas and census agglomerations.

Table 1. Population in collective dwellings, by type of collective dwelling, Canada, provinces and territories, 2001 Census—100% data

Note: Totals are randomly rounded separately and may not add up to the sum of the categories.
