

You know how much an independent, impartial, credible assessment matters. So do we.

The Standards Council of Canada (SCC) is a Crown corporation with the mandate to promote efficient and effective standardization in Canada. The SCC coordinates the National Standards System and offers a variety of standards and accreditation programs and services. Its Program for Accreditation of Laboratories – Canada (PALCAN) has accredited hundreds of laboratories in a variety of general testing and specialty areas.

Founded in 1880, the Ontario Medical Association plays a vital role in the development and promotion of health-care services across Ontario. The OMA operates the Quality Management Program – Laboratory Services (QMP-LS), which has over 30 years of experience in quality assurance of medical laboratories. For additional information on the OMA QMP-LS, visit: [www.qmpls.org](http://www.qmpls.org).

Your clients know the importance of reliability when it comes to diagnostic medical laboratory examinations. Your industry demands rigour and your clients depend on you to deliver credible results. Now you can give your clients that peace of mind with accreditation from two of the most trusted bodies in the country – the Standards Council of Canada (SCC) and the Ontario Medical Association (OMA).

**RECOGNITION. CREDIBILITY. TRUST.**

Through our joint national laboratory accreditation program the SCC and OMA offer formal recognition of your laboratory's competence – combining rigorous testing requirements and adherence to international standards.

Accreditation underscores your lab's experience, superior technical competence and reliability. It shows that you meet the requirements of internationally recognized standards (ISO 15189) and demonstrates your lab's commitment to dependable, impartial results that will help you build a high level of trust and confidence with your clients. With combined recognition from both the SCC and the OMA, you can boast that you've passed a thorough independent assessment of quality management and technical competence, a benchmark above and beyond ISO 9000 certification.
