

The National Child Benefit

Progress Report 2005

SP-540-11-06

What is the National Child Benefit?

The National Child Benefit (NCB) initiative is a joint initiative of Canada's federal, provincial and territorial governments,¹ with a First Nations component, that aims to help prevent and reduce the depth of child poverty, support parents as they move into the labour market and reduce overlap and duplication of government programs.

How the NCB Works

The NCB combines two key elements: monthly payments to low-income families with children, and benefits and services designed and delivered by the provinces, territories and First Nations to meet the needs of low-income families with children in each jurisdiction.

The Government of Canada contributes to the NCB initiative through a supplement to the base benefit of the Canada Child Tax Benefit (CCTB).² This additional payment is called the NCB Supplement. It provides extra support to low-income families with children by increasing the monthly payments they receive through the CCTB.

Provinces and territories have the flexibility to adjust social assistance or child benefit payments by an amount equivalent to the NCB Supplement. First Nations follow the approach of the relevant province or territory. As a result, families with children on social assistance maintain at least the same level of benefits, while funds resulting from such adjustments support new or enhanced programs benefiting low-income families with children.³

No family receiving social assistance in any jurisdiction experienced a reduction in its overall level of income support as a result of the NCB.

Lowering the "Welfare Wall"

Before the NCB, moving from social assistance into a paying job often meant only a minimal increase in family income for low-income parents.

It could also mean a loss of other valuable benefits, including health, dental and prescription drug benefits. As a result, families could find themselves financially worse off in low-paying jobs as compared with being on welfare—a situation known as the "welfare wall."

The NCB works to reduce the welfare wall by providing child benefits outside of social assistance and ensuring that enhanced benefits and services continue when parents move from social assistance to paid employment.

Monitoring the NCB's Progress

In 1998, Canada's Federal/Provincial/Territorial

Ministers Responsible for Social Services introduced the NCB initiative, as part of the National Children's Agenda, under which Canadians in every part of the country are engaged to ensure that all Canadian

children have a good start in life, and that families with children have the tools they need to provide care and nurturing. *The National Child Benefit Progress Report: 2005* is a key element of the *National Child Benefit Governance and Accountability Framework* as it fulfills the commitment of Federal/Provincial/Territorial Ministers Responsible for Social Services to report annually to Canadians on the progress made under this initiative.

This seventh report provides an update on the progress the NCB is making in improving the economic well-being of low-income families with children. The report examines both societal level indicators, which track socio-economic trends that relate to the NCB, and direct outcome indicators, which identify the direct impact of the NCB on families with children.

In 2004–2005, the Government of Canada invested \$8.9 billion through the CCTB system (the base benefit of the CCTB plus the NCB Supplement) to support all low- and middle-income families with children. Of this amount, investments for low-income families with children are estimated to total \$6.5 billion to support 1.6 million low-income families with 2.8 million children. This includes \$2.9 billion through the NCB Supplement and \$3.6 billion through the base benefit of the CCTB.

It is estimated that provinces and territories reinvested and invested a total of \$841.4 million in 2004–2005 in programs and services in six main areas:

- home-to-work transitions;
- cultural enrichment;
- child nutrition;
- child care; and
- support to parents.

Child/day care initiatives — to help low-income families cover extra child care costs incurred when working.

Child benefits and earned income supplements — to provide low-income families with more money so parents can stay in jobs working toward higher wages.

to 850,500 in 2003, a decrease of approximately 453,500 children.

The report also identifies the direct impact of the NCB in preventing and reducing low income among families with children. Using the most recent available data on the post-tax LICOs, the analysis estimates that in 2003, as a direct result of the NCB, 159,000 children in 60,500 families were prevented from living in low income, a reduction of 12.4 percent.

These families saw their average disposable income increase by an estimated \$2,600, or 9.7 percent. For those families with children who remained in low-income situations, the NCB reduced the low-income gap by 16.1 percent.

The Government of Canada's Contribution to Increasing Benefits for Canadian Families

In 1998, Canada's Federal/Provincial/Territorial

Ministers Responsible for Social Services introduced the NCB initiative, as part of the National Children's Agenda, under which Canadians in every part of the country are engaged to ensure that all Canadian

children have a good start in life, and that families with children have the tools they need to provide care and nurturing. *The National Child Benefit Progress Report: 2005* is a key element of the *National Child Benefit Governance and Accountability Framework* as it fulfills the commitment of Federal/Provincial/Territorial Ministers Responsible for Social Services to report annually to Canadians on the progress made under this initiative.

This seventh report provides an update on the progress the NCB is making in improving the economic well-being of low-income families with children. The report examines both societal level indicators, which track socio-economic trends that relate to the NCB, and direct outcome indicators, which identify the direct impact of the NCB on families with children.
