

MAKE YOUR HOME AND CAR SMOKE-FREE

Did You Know?

Second-hand smoke has been linked to asthma, middle ear infections, Sudden Infant Death Syndrome (SIDS), bronchitis, cancer and other illnesses in children. Children rely on their parent(s) to provide a healthy home environment. Unfortunately, many parents are unaware that some of the actions they are taking to remove second-hand smoke from their home are not effective. Opening a window, turning on a fan, spraying air freshener, smoking in another room or using an air purifier **DO NOT ELIMINATE** exposure to toxic second-hand smoke.
