VOLUME 5, EDITION 3 THIRD QUARTER 2003

Urban Areas Continued to Show Strength

Rural Starts Fall Short of the 2002 Level

- $\sqrt{}$ Housing activity on Prince Edward Island reached 250 units during the third quarter of 2003, a decline of 101 units when compared to 2002. However, it is important to note that 2002 was the best third quarter in over 25 years.
- $\sqrt{}$ Total single starts in the third quarter fell to 174 units, a significant decrease when compared to the 265 units started during the same period last year. Total multiple starts also decreased during this period, dropping to 76 units from 84 in 2002. This drop in single starts was not unexpected, when considering the level of single rural activity the Island experinced in the second quarter.
- $\sqrt{}$ Total housing starts in Charlottetown remained almost unchanged in the third quarter with 170 units when compared to 186 during the same period last year. This occured as a result of continued strength of both singles and multiple construction in remained unchanged at 108 units, in 2003, to 62 units.
- $\sqrt{}$ Single starts in Summerside in the third quarter rose to 18 units in the third quarter, from 15 units during the same period last year. Multiple starts also increase during the same period reaching 12 units.

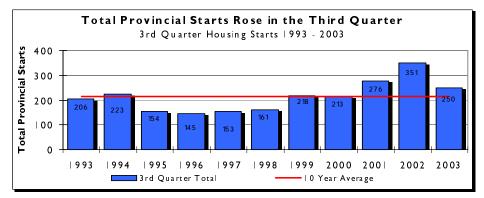

the capital region. While single starts multiple starts decreased by 16 units

 $\sqrt{}$ The strength of the housing activity on PEI in the third quarter, came from the urban areas. Housing construction in the region is expected to remain strong for the remainder of 2003.

Housing Market Overview

Urban Starts Show Continued Strength in the Third Quarter

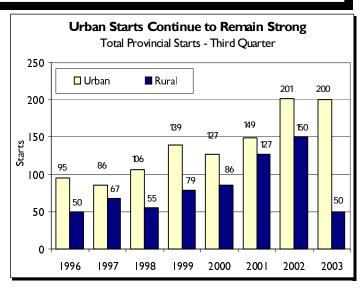

- √ The strong results seen in the third quarter were mainly a result of continued strength in the urban areas. Total urban starts in the third quarter reached 200 units, which almost essentially equalled the 2002 level of 201 units. Rural starts however, decreased to 50 units from 150 during the same time last year.
- √ The decrease in rural starts in the third quarter was expected when considering that starts increased by 180 per cent in the second quarter when compared to the 2002 level. This level of construction activity was not sustainable and as a result, rural starts recorded a drop of 50 units in the third quarter.
- On a year-to-date basis rural starts have reached 191 units comapred to 200 units in 2002, while urban areas recorded 428 units, an increase of 9 units from last year.

MLS® Average Sales Price Sets a New Record in Charlottetown

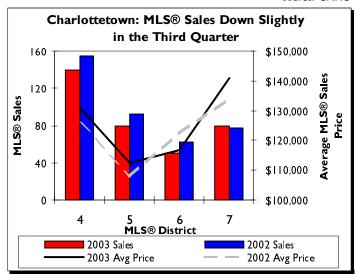

- On an year-to-date basis MLS® sales have dropped marginally in 3 of the 4 Districts that make up the Charlottetown area. The only district to post a increase was District 7 (See Table 2 on Page 3) where sales increased to 80 units, a gain of 3 over the previous year.
- √ Despite the overall decline in sales during the first 9 months of 2003, the average sales price for Charlottetown has increased. District 7 continues to be a popular location with home buyers, and as a result the average sales price increased to \$140,887 a gain of by a impressive 12 per cent. The only District to post a decline in average sales price was District 6, where the sales price retreated by a modest 5 per cent from the 2002 level.

Employment Growth Continued in the First Nine Months of 2003

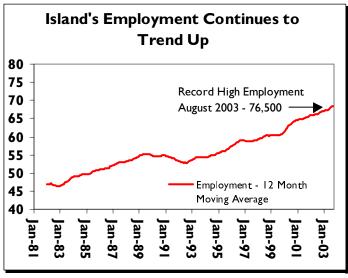

- In August of 2003, employment levels in PEI rose to 76,500 a new all time high. This level surpasses the previous record of 74,100 set in August 2002.
- On a provincial basis, the third quarter of 2003 saw the number of people employed increase by 2.9 per cent, when compared to the same period last year. This means that there were about 2,133 more Islander's working in the third quarter of 2003 than in 2002.
- In the third quarter, PEI show the provincial unemployment rate decreased to 8.0 per cent from 9.5 per cent from the same period last year.

SUMMARY

Canada Mortgage and Housing Corporation

Multiple Starts Show Continued Strength in 2003

Migration and Low Interest Rates Buoy the Housing Market

A combination of low interest rates, strong employment, and positive migration are expected to bolster the Charlottetown housing market for the remainder of 2003 and into 2004.

Interest rates have remained low over the past few years and are not expected to increase significantly over the forecast period. Although a slight increase is expected, as the capital markets begin to rebound in 2004, it will not be enough to dissuade most homebuyers.

Employment in the capital region is poised to set an all-time record in 2003, with an average of 19,877 people employed in the first three quarters, an increase of 330 jobs from the same period in 2002. Overall, there was a gain in both part-time and full-time employment over the first 9 months of 2003. During the past year the increase in

employment has come mainly from the agriculture, public administration, transportation, storage, and communication utilities sectors. These factors are a sign of the regions diversifying economy and will help to bolster the housing market in the coming years.

Positive net-migration is also contributing to strong demand for housing in the capital region. According to Statistics Canada 2001 Census, the Charlottetown CA's population increased by 1,134 people from 199 to 2001. When these numbers are examined more closely, it appears that the majority of these people have simply moved to the area from rural parts of the Island. This shows that P.E.I. is no exception to the national trend of urbanization, which is creating a strong demand for housing in Canadian cities.

Our current forecast indicates that 290 single-family homes will be started in both 2003 and 2004. Our forecast also calls for 140 and 100 multiple units over the same period; bringing total starts to 430 units in 2003 and 390 units in 2004.

Mortgage Rates % to Rise But Remain Low In Historical Terms

The easing pace of economic growth and inflation which began in the second quarter of 2003 means the central bank will follow an accommodative monetary policy be keeping administered interest rates low over the next few months. As the U.S. economy improves and interest rates south of the border begin to rise by next year, Canadian interest rates will rise too in an effort to keep inflation stable and preserve the value of the currency.

As a result, the outlook for mortgage

rates for the remainder of 2003 and 2004 calls for modest increases but they will remain low in historical terms. Easing inflation and lingering concerns over trade, health and geopolitical risks will keep mortgage rates low in the near future prior to rising slightly next year.

One, three and five-year mortgage rates are expected to be in the 4.25-5.25, 5.25-6.25, and 6.00-6.75 per cent range, respectively this year. Mortgage rates are forecast to rise by 0.50-0.75 per cent next year. Similar to recent trends, discounts from posted rates will remain a major competitive instrument within the market.

New Home Prices Expected to Rise in 2004

Over the last eight years, the price of building a new home, including the purchase of a lot, as measured by the New Housing Price Index (NHPI) has been outpaced by the Consumer Price Index (CPI) in Charlottetown. The NHPI measures changes over time in the contractors' selling prices of new residential houses and provides results individually for the structure (house), land and a combined total cost.

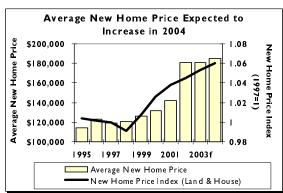

Overall, when compared to other goods and services, the cost of a new home in Charlottetown is relatively less expensive today than eight years ago.

Although the average new home price has decreased in relative terms over the past few years, it has been increasing steadily in actual dollars. This is the result of people choosing to build

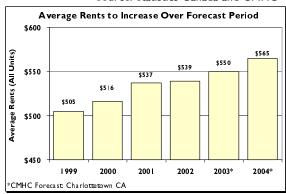

larger and more elaborate homes, not an actual increase in price. Over the past five years the average price has increased from \$120,850 in 1998, to \$180,638 (Jan-Sept) in 2003. This represents an increase of 49.7 per cent. The trend of people building more expensive home is expected to continue, and as a result, expect to see the average new home price exceed \$181,000 in 2004.

Vacancy Rate to Increase Slightly in 2003

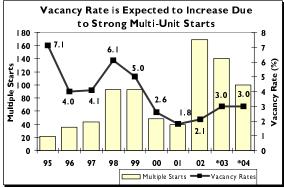

Demand for rental units in Charlottetown is expected to remain strong in both 2003 and 2004. Despite strong demand, the vacancy rate for the Capital region is expected to inch up to 3.0 per cent in 2003, with little movement expected in 2004. The expected rise in the vacancy rate is not due to a decrease in demand, but rather an increase in supply. With interest rates at near 50-year lows, many developers have decided to build new rental properties. As a result, there has

Source: Statistics Canada and CMHC

Source: CMHC

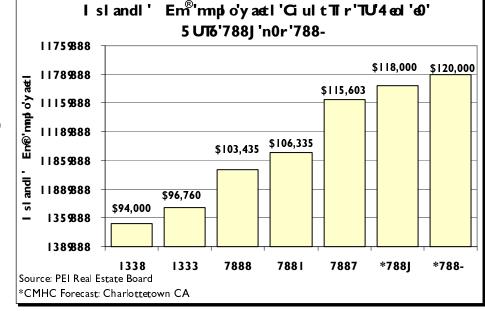

Source: CMHC

been about 350 new high-end rental units added to the local rental market since 2001. To put this into perspective, there has been as many rental units added to the local rental stock since 2001, as there was between the-six year period from 1994 to 2000. It is expected that 140 and 100 units will be added to Charlottetown's rental stock in 2003 and 2004, respectively.

Due to high levels of construction activity at the high-end of the rental spectrum, results from CMHC's annual Rental Market Survey conducted in October are expected to show rental rates rising to \$550 this year and further to \$560 in 2004.

Sales to Remain Strong in the Charlottetown Area

MLS® sales are expected to decrease slightly to 525 homes in 2003 and

remain at this level again in 2004, due mainly to a shortage of listings in the under \$120,000 price range.

The average sales price is expected to rise by a modest 2.0 per cent in 2003, after a sustainable jump of 8.7 per

cent in 2002. This increase will occur due to a shortage of listing in the under \$120,000 price range, as well as the low interest rates which allows buyers to choose larger more expensive homes.

What's 9tt 9worth 9today?

A comparison of residential real estate, stocks, and the general cost of living on PEI

It is hard to ignore the daily cacophony of advice streaming from financial planners and investment specialists in the business section of the newspaper and on television with respect to where to park your money for a rainy day. Often there are conflicting opinions about stocks versus residential real estate as the key to financial freedom. While individual investment advice is a personal decision and no investment is immune from risk, it is interesting to look at how local housing markets have compared to Canada's key stock index over the past ten years especially when compared to the local cost of living.

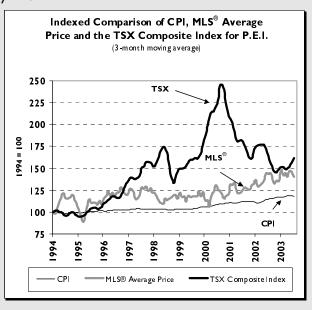

Over the past ten years the average MLS® resale price on PEI climbed 40 per cent from just under \$69,000 in

1994 to around \$100,000 today. This compares with a 62 per cent gain on the TSX Composite Index over the same time frame. Although the TSX has outperformed the local housing market over the last ten years, the extreme degree of volatility in the

stock market far exceeds the fluctuations in the area's residential real estate market. In addition to the favourable tax treatment afforded to primary residences, a home is also a place to live, which is a fairly important consideration in any financial plan. Finally, when measured against the region's general cost of living, overall gains in both stocks and residential real estate have exceeded inflation as measured by the

Consumer Price Index (CPI). In other words, regardless of where you

parked your money ten years ago, it would have posted a positive real rate of return by today (although some investment choices may have resulted in more sleepless nights instead of a place to sleep).
