New Home Market

2006 Housing Starts Second Best On Record

Total housing starts in the Alberta Capital Region fell year-over-year in December due to a decline in both single-detached and multiple unit activity. Total housing starts across the Edmonton Census Metropolitan Area (CMA) declined by 39 per cent from December 2005 to 681 units. Despite the lower production in December, total starts for the year exceeded

2005's tally by over 12 per cent and represented the second best year on record. Total housing starts across Metro have now exceeded 11,000 units on an annual basis for an unprecedented fifth year in a row.

Single-detached home builders started work on 569 units in December, a 17 per cent drop from

the same month in 2005. This represents the first year-over-year decline in monthly single-detached starts since August 2005. However, with 11 of the 12 months in 2006 posting higher activity compared to 2005, single-detached starts in 2006 eclipsed the output of 2005 by almost 19 per cent and set a new annual record of 9.064 units. Much of this increase took place in the suburban areas outside of Edmonton City such as Leduc City and Sturgeon County. While the city of Edmonton experienced a seven per cent rise in single-detached starts over 2005, the municipalities outside of Edmonton saw a 42 per cent gain the number of new houses started last year.

Despite the decrease in starts in December, single-detached units under construction increased from the previous month and remained at record levels as starts managed to exceed completions. Completions in December fell by three per cent from the same month in 2005 to 554 units. Meanwhile, absorptions fell by six per cent year-over-year to 548 units. This resulted in a modest increase in the inventory of completed unoccupied units from the previous month of November. Inventories were nonetheless still 17 per cent below the number of unabsorbed singles that were on hand in December 2005. A typical single-detached unit absorbed in December for an average price of \$354,459, representing an increase of 27 per cent from the December 2005 average.

Following a major upturn in November, multiple unit starts took a breather in December, falling by 74 per cent from December 2005. While semi-detached starts increased substantially over the same month in

2005, the region recorded fewer row and apartment starts. For the year, total multiple unit starts exceeded 2005's totals by four per cent to 5,906 units, representing the best year since 2003. Semi-detached starts increased by close to 35 per cent in 2006, while row and apartment starts combined fell by close to four per cent from total volumes started during 2005. Areas reporting large annual increases in multiple unit starts in 2006 included Beaumont, Ft. Saskatchewan, Morinville and Strathcona County, while municipalities that saw measurable declines included Spruce Grove, St. Albert and Stony Plain.

Multiple unit completions jumped by 82 per cent year-over-year in December to 423 units. Multiple dwelling absorptions also showed a large gain, rising by 36 per cent over December 2005 to 367 units. With completions outpacing absorptions, the inventory of complete and unoccupied multiple units increased from the previous month of November. This represented the first month-over-month increase in multiple inventories since May 2006. Despite this up-tick, inventories of completed and unoccupied semi, row,

and apartment units combined were 57 per cent below the level reported in December 2005.

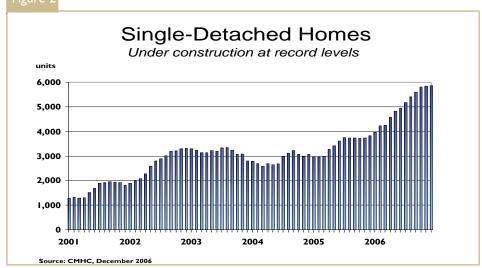

Resale Market

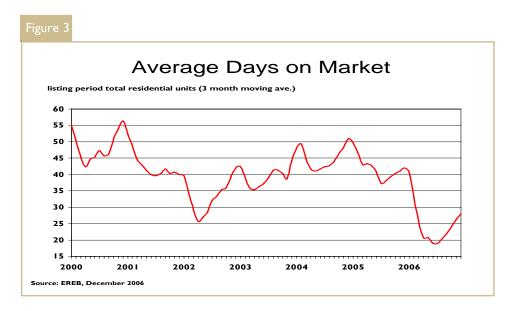

Another Record-Setting Year for Resale Market

For the fourth year in a row, residential sales reported by the Edmonton Real Estate Board (EREB) in 2006 set a new benchmark. At 21,984 units, total home sales on the MLS® surpassed 2005's record tally by 18 per cent. Strong inmigration, a buoyant local economy, low new home inventories and a very tight rental market all contributed to this historic performance. In December, sales maintained the strength witnessed in the previous 11 months, rising by 18 per cent year-over-year to 1,074 units.

Similar to the story we reported in our December 2005 edition of Housing Now Edmonton, fewer new listings in 2006 combined with a growing number of sales continued to work to the vendor's advantage last year. The annual average for the EREB's sales-to-

new-listings ratio hit a record 87 per cent in 2006, up from 72 per cent in 2005 and 67 per cent in 2004. With the months of supply numbers near record lows throughout much of the year, resale prices responded accordingly. The average residential resale price rose by 29 per cent in 2006 to \$250,915.

For prospective buyers, there is some good news unfolding. While active listings were still down substantially in a year-over-year basis in December, the disparity with the previous year is starting to narrow due to an improvement in new listings which began in July. At mid-year, active listings were 60 per cent below the levels reported in June 2005 but were down by only 31 per cent year-over-year in December. While homes continued to sell quickly in the fourth quarter, they are remaining on the market longer than they did this summer. The average residential listing period stood at 30 days in December, 29 per cent below the 42 day average in December 2005. However, the typical time required to move a home listed on the MLS® has moved up steadily since hitting a record low 18 days in July.

Single-detached resale activity also hit a new benchmark in 2006, eclipsing 2005's record sales level by nine per cent. This came about despite a 3.5 per cent drop in total new listings during the year. The low supply levels, relative to demand, put strong upward pressure on resale prices. The price of a typical single-detached home sold in Greater Edmonton in 2006 increased by 33 per cent to an average of \$292,829. Existing single-family units priced under \$150,000 largely vanished from the market place in 2006, while the lion's share of units changed hands for prices above \$250,000.

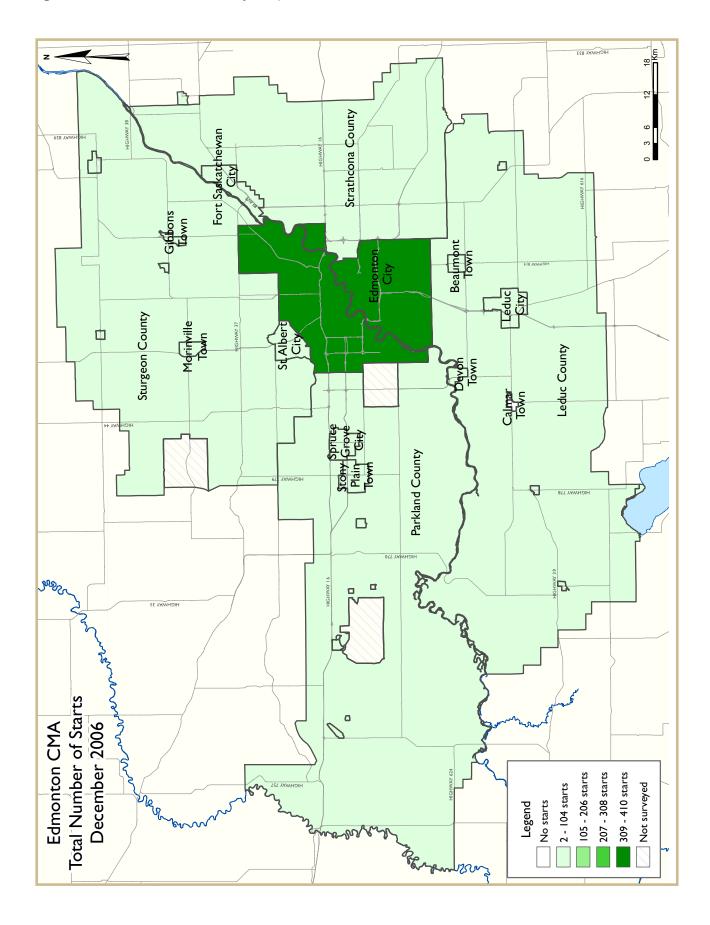

With prices for both new and existing single-detached homes experiencing strong growth in 2006, demand for resale condominiums jumped substantially last year. A tight rental market which caused rents to jump by nearly 10 year cent in 2006 also contributed to a growing interest in condominium ownership. Following an eight per cent increase in 2005, MLS® sales soared by 35 per cent last year to a record 6,761 units. Meanwhile, new listings during the year increased by just over one per cent

or less than 100 units compared with total new MLS® listings in 2005. This resulted in an extreme imbalance between supply and demand, with the sales-to-active-listings ratio averaging above 100 per cent for much of the year. Resale prices jumped accordingly, rising by 31 per cent over 2005's record to an average \$185,131. Condo units priced over \$200,000 saw their market share increase from 10.5 per cent of sales in 2005 to around one third in 2006.

Economy

Tight Labour Market Supports Strong Income Growth

The Alberta Capital Region remains one of the hottest labour markets in Canada. The seasonally-adjusted unemployment rate averaged 3.9 per cent in the fourth quarter, compared with an average 4.4 per cent during the last three months of 2005. The low jobless levels are causing wages to surge as employers attempt to lure workers from their competitors or from out of province. Following a 3.2 per cent increase in 2005, Statistics Canada's tally of average weekly earnings increased by 6.8 per cent in 2006. These income gains will help support demand for both new and existing housing across the region in 2007.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or

the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred

on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that Canada maintains one of the best housing systems in the world. We are committed to helping Canadians access a wide choice of quality, affordable homes, while making vibrant, healthy communities and cities a reality across the country.

For more information, visit our website at http://www.cmhc.ca/

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for **free** on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to http://www.cmhc.ca/housingmarketinformation

For more information on MAC and the wealth of housing market information available to you, visit us today at http://www.cmhc.ca/housingmarketinformation

To subscribe to priced, printed editions of the national standardized product suite or regional specialty publications, call I 800 668-2642.
