Date Released: April 2007

New Home Market

FEWER HOUSING STARTS IN MARCH

On the heels of a six per cent decline in February, total housing starts in Greater Edmonton fell by five per cent on a year-over-year basis in March. As was the case in February, improvements in multiple unit activity were countered by another weaker month for single-detached builders. Total housing starts across the Edmonton Census Metropolitan Area (CMA) declined from 1,232 units in

March of last year to 1,169 units this March. Despite weaker activity in February and March, new home building remains ahead of the total number of starts recorded in the first quarter of 2006 due to a strong beginning to the year in January.

For the fourth consecutive month, single-detached starts across the region declined on a year-over-year

basis. Basements were poured for 531 units in March, down 19 per cent from the same month in 2006. Much of the slowdown was reported within Edmonton City, where single starts dropped by 58 per cent from March of last year. In contrast, single-detached starts in the Suburban Areas improved by 45 per cent over the third month of 2006.

On a year-to-date basis, single-detached starts were 15 per cent below the levels tallied in the first quarter of last year. In spite of the pullback, activity so far this year still represents the second best first quarter performance on record.

New house prices continued to soar in March as builders attempt to pass on rising costs for serviced land, labour and many building materials. The average absorbed price for single-detached homes in March stood at \$336,756, representing an increase of 34 per cent from the same month last year. This represents the third month in a row where year-over-year price growth has exceeded 32 per cent. Readers should be mindful that CMHC's average absorbed price reflects the price of units that were

completed and absorbed in March and in many cases these transactions were negotiated and priced before construction began.

Single-detached completions tumbled in March by 25 per cent to 482 units. This undermined our count of absorbed units, which fell by 20 per cent year-over-year to 503 units. However, with absorptions outpacing completions in March, the new single-detached inventory reported a month-over-month decline from 502 units in February to 481 units in March. Compared with the same month last year, the inventory of completed and unoccupied units including show homes was down by 12 per cent. This situation is not expected to persist during the second quarter. Single-detached units under construction in March were 35 per cent above levels reported at the end of the first quarter of 2006. Look for completion levels to ramp up in the months ahead, allowing for some inventory replenishment throughout the region.

Multiple unit starts increased on a year-over-year basis for the third month in a row in March. New semi-detached,

row and apartment units combined reached 638 units, representing a 10 per cent gain over the same month in 2006. As was the case in February, weaker production of new semi-detached units was offset by stronger row and apartment unit starts. To the end of March, multiple dwelling starts were 35 per cent ahead of activity levels reported in the first three months of 2006. Within Edmonton City, multi-unit starts have improved by 21 per cent so far this year while volumes in the Suburban Areas have more than doubled the number of starts recorded in the first quarter of last year.

Condominiums continue to dominate multiple unit construction activity across Metro this year. Condo tenure has accounted for over 89 per cent of multiple dwelling starts so far this year, compared with close to 10 per cent for freehold and less than one per cent for rental units.

Multiple unit completions reached 516 units in March, largely unchanged from the same month last year. At 645 units, absorptions were up by 4.5 per cent year-over-year and outstripped completions by 129 units. As such, inventories continued to tumble, falling 66 per cent from March of last year and dropping below 300 units for the first time since August 1999.

Resale Market

Resale Market on Record-Setting Pace

Edmonton's existing home market continued to set new records for sales and average prices during the first quarter of 2007. Total residential sales

Figure 2

on the MLS® rose 17 per cent year-over-year in March and 21 per cent above the previous record set in the first three months of 2006. A strong economy, stable mortgage rates and sustained high levels of in-migration continue to fuel demand across the Capital region. And, while the number of homes entering the market place has improved so far this year, the uptick in sales has kept the months of supply numbers at extremely low levels. This chronic shortage of supply, relative to demand, has resulted in sustained upward pressure on resale prices. According to the Edmonton Real Estate Board (EREB), the average residential resale price rose an unprecedented 50 per cent in the first quarter to \$318,261.

Despite a four per cent year-over-year decline in sales during March, single-detached sales year-to-date managed to eclipse last year's benchmark for MLS® first quarter sales. Meanwhile, a 13 per cent increase in new listings over the first three months of 2006 has helped to improve inventory slightly. At the end of March, active listings were 10 per cent higher but overall months of supply still remain relatively low. As such, prices have been

moving upward rapidly so far this year. To the end of March, the average single-detached sale price rose by 52 per cent to a record \$379,497. This dramatic rise in the average selling price is indicative of the large shift in the overall price structure of houses available on the MLS®. For example, single-detached homes priced over \$350,000 represented almost 59 per cent of all singles sold during the first quarter, up from only 24 per cent during all of 2006. On the flip side, homes selling for under \$200,000 accounted for only six per cent of the market so far this year compared with 19 per cent in 2006 and 46 per cent in 2005.

Following an unparalleled year for sales and price growth in 2006, Edmonton's resale condominium market has again rewritten the record book during the first quarter. Considering the rapid price growth for both new and resale single-family homes that has occurred across the region in the past 15 months, this phenomenal demand for existing condo dwellings should surprise no one. For many new entrants into the region's homeowner market, condominiums represent the best alternative, particularly for

prospective first-time buyers looking for a home priced under \$200,000. Sales on the MLS® rose by 48.5 per cent in the first quarter to 2,096 units. Despite a 63 per cent increase in new listings during the first quarter, the market remained very tight resulting in sharp price increases of 64 per cent over the first three months of 2006 to an average of \$243,352.

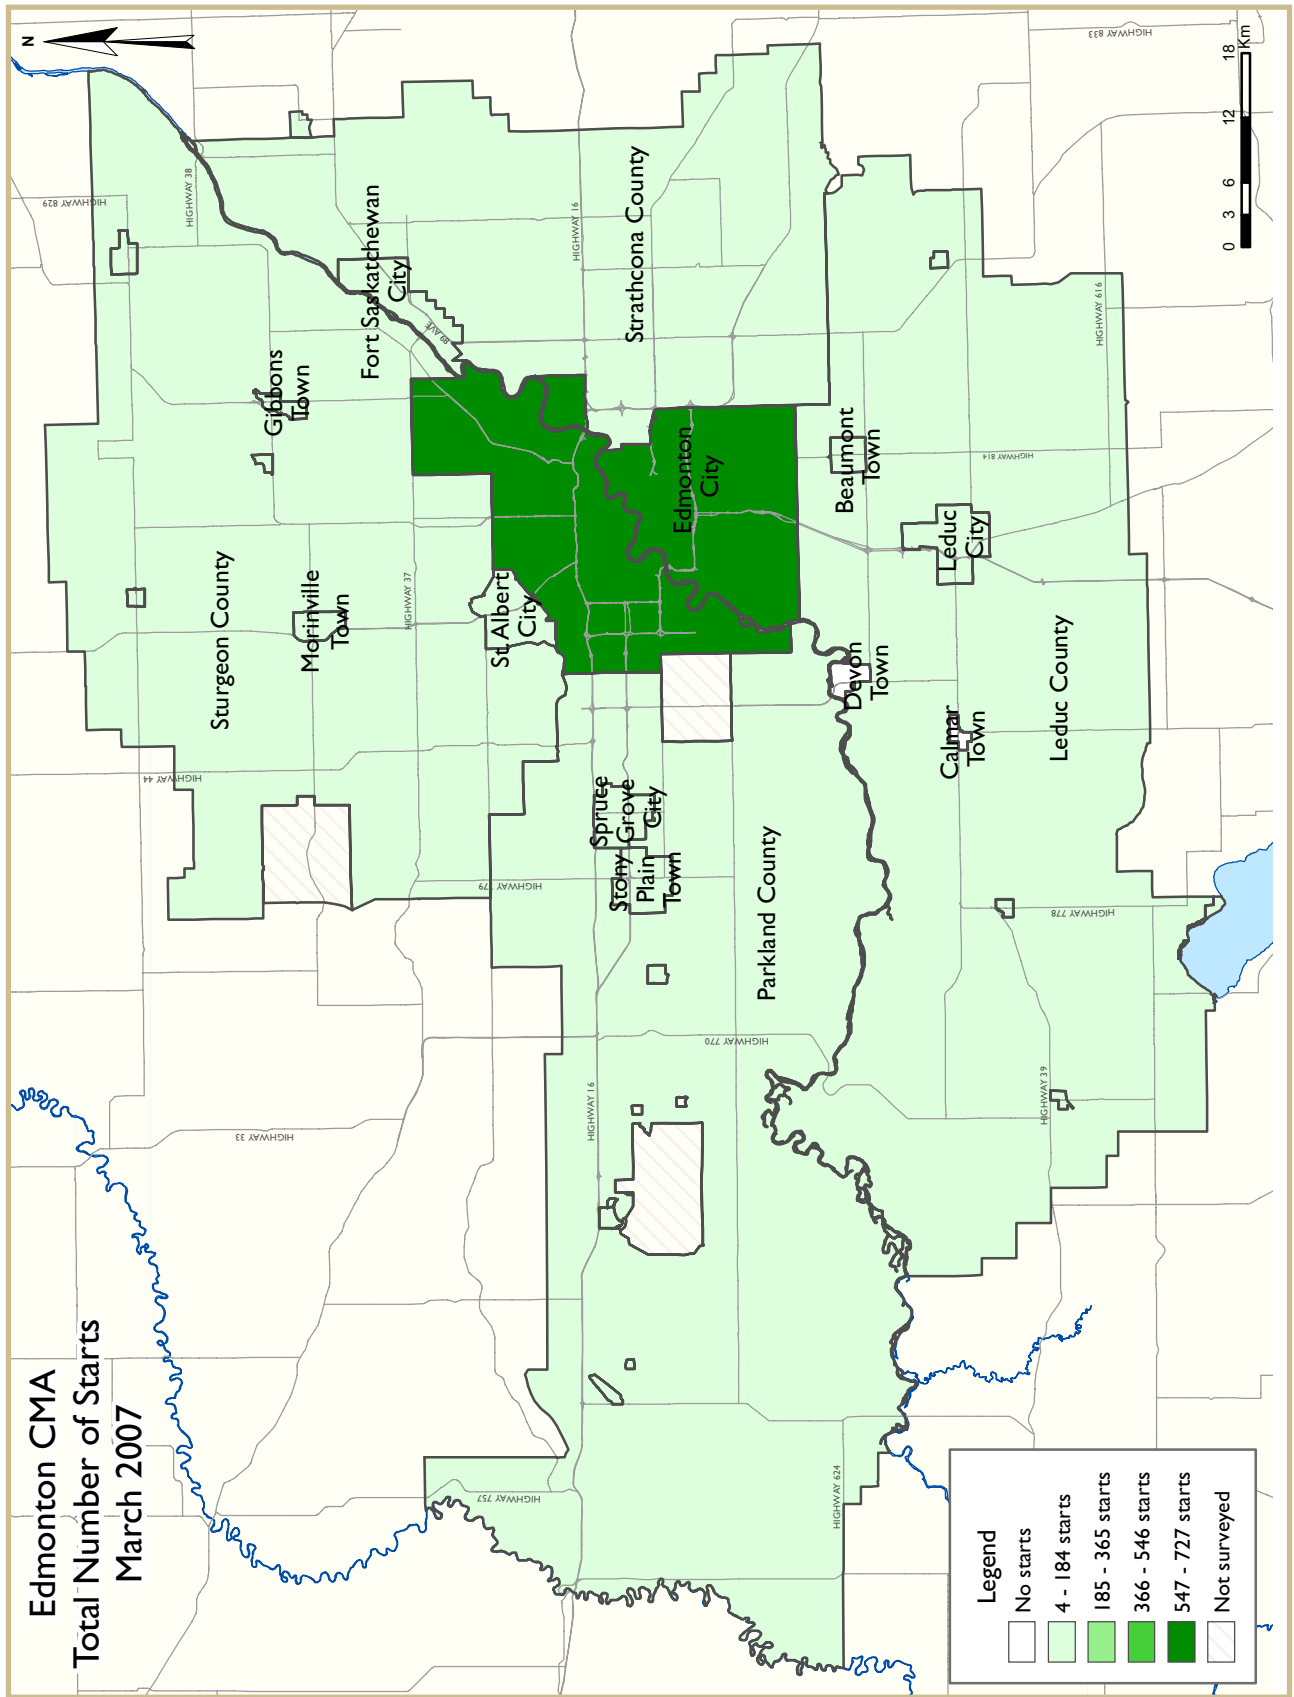

Economy

Labour Market Remains Tight

The labour market across the Capital region remains very tight and this is encouraging a lot of newcomers to migrate here. Edmonton's seasonally-adjusted unemployment rate in March was the third lowest in the country at 3.5 per cent, after Victoria's 3.2 per cent and Calgary's 3.3 per cent. Inter-provincial net migration into Alberta hit a record high of 63,300 people in 2006. This represented the tenth consecutive year that the province had maintained the highest inter-provincial migration in Canada. Meanwhile, total net migration into the Edmonton CMA increased by 53 per cent last year compared with 2005. When combined with robust employment and income gains, this helps explain the stellar performances for both new and existing housing markets observed in the past 15 months.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that Canada maintains one of the best housing systems in the world. We are committed to helping Canadians access a wide choice of quality, affordable homes, while making vibrant, healthy communities and cities a reality across the country.
