

Odyssey of Light

A dazzling new exhibition!

Since the dawn of time, the sun, the moon, the stars and the aurora borealis have lit the sky. Humanity has studied light and tried to harness it, control it, and understand its science and its beauty.

Follow the development of artificial light through flint stones, seal oil lamps, gas streetlight fixtures, holograms and a luminescent keyboard in a dramatic, theatrical environment where each object, screen, interactive, and photograph is unveiled in the magic of its light.

An enlightening experience filled with mystery and fascination awaits you.
