

JNCC Report No. 342
**Checklist of mammals
listed in the CITES appendices
and in EC Regulation 338/97**

**6th edition
2003**

compiled by
UNEP-WCMC

The Joint Nature Conservation Committee is the body constituted by the Environmental Protection Act 1990 to be responsible for research and advice on nature conservation at both UK and international levels. It is a committee of the Countryside Council for Wales, English Nature and Scottish Natural Heritage, together with independent members and representatives from the Countryside Commission and Northern Ireland. It is supported by specialist staff.

Prepared under contract from the Joint Nature Conservation Committee by **UNEP-WCMC**. The UNEP World Conservation Monitoring Centre was established in 2000 as the world biodiversity information and assessment centre of the United Nations Environment Programme. The roots of the organisation go back to 1979, when it was founded as the IUCN Conservation Monitoring Centre. In 1988 the World Conservation Monitoring Centre was created jointly by IUCN, WWF International and UNEP. The financial support and guidance of these organisations in the Centre's formative years is gratefully acknowledged.

The designations of geographical entities in this report, and the presentation of the material, do not imply the expression of any opinion whatsoever on the part of JNCC or WCMC concerning the legal status of any country, territory, or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Acknowledgements

This checklist was compiled by UNEP-WCMC under contract F90-01-580 from the Joint Nature Conservation Committee.

The volume builds on earlier editions, and the numerous contributors to those editions are acknowledged. UNEP-WCMC staff involved in the production of this volume include Tim Inskipp, Harriet Gillett, James O'Carroll, Gill Warltier, Sarah Ferriss and Amelie Knapp. The project was supervised by Gerardo Fragoso.

Vin Fleming and Alison Littlewood of the JNCC CITES Unit are thanked for providing advice and guidance throughout.

Introduction

In April 1991, the Nature Conservancy Council for England (English Nature), Countryside Council for Wales and Scottish Natural Heritage acting together through the Joint Nature Conservation Committee were appointed by the Secretary of State for the Environment as the United Kingdom's Scientific Authority for Animals under the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). CITES regulates international trade in wild animals and plants and in products derived from them, to help to ensure their conservation on a global scale.

The intention of this publication is to provide a list of the species and subspecies of mammals included in the CITES appendices, together with their conservation status category in the *2002 IUCN Red List of threatened species* and the appropriate annex in EC Regulation 338/97 (and subsequent updates).

This revised edition incorporates additions and amendments to the CITES appendices up to and including those made at the 12th Conference of the Parties in Chile in November 2002 (effective from 13 February 2003).

For background material on the rationale of the IUCN threat categories, readers are referred to IUCN (2002); for background on the workings of CITES, recommended

works are Favre (1989) and Wijnstekers (1995). For information by country on the diversity and status of mammals and other taxonomic groups, and for a general review of biodiversity, readers are referred to WCMC (1992) and WCMC (1994).

In a publication of this nature, it is inevitable that users will discover entries that need correcting or updating. The publishers and UNEP-WCMC would be grateful to receive details of those entries so that the necessary changes can be made in the database from which this document is produced.

The database is continually updated and the downloaded version of this document may contain more recent information than the original printed publication.

Explanatory notes

Each species is typically represented by a block of text including scientific name (with alternatives), common names in the three official CITES languages (where available), geographic range, CITES appendix, EC Regulation 338/97 Annex, and Red List category. Where a species has component populations or formal subspecies which are treated differently by CITES, the species entry is subdivided appropriately.

Scientific names

For each taxon, the scientific name is given first (as listed in the CITES appendices), with the most frequently used synonyms listed beneath the scientific name.

The nomenclature of genera and species of mammals follows Wilson and Reeder (1993), except where the CITES appendices differ (as noted below).

The taxonomic scope and sequence of orders and families in this checklist follow the system adopted in the appendices to CITES. The appendices are based on the classification of mammals proposed by Simpson (1945).

The appendices differ from Simpson (1945) at ordinal and familial level as given below:

The order Marsupialia is split into three orders:

Dasyuromorphia
Peramelomorphia
Diprotodontia

The following families have been separated:

Dasyuromorphia:
Thylacinidae from Dasyuridae
Diprotodontia:
Burramyidae from Phalangeridae
Potoroidae from Macropodidae
Primates:
Cheirogaleidae and Megaladapidae from Lemuridae
Galagonidae from Loridae

Hylobatidae from Pongidae
Cetacea:
Neobalaenidae from Balaenidae
Carnivora:
Herpestidae from Viverridae
Artiodactyla:
Moschidae from Cervidae

The following families have been renamed:

Diprotodontia:
Phascolomidae now Vombatidae

Cetacea:
Rhachianectidae now
Eschrichtidae

The following families/genera have been included within another family:

Primates:
Callimico in Callitrichidae not
Cebidae
Pongidae in Hominidae
Carnivora:
Ailuropoda and *Ailurus* in Ursidae
not Procyonidae
Xenarthra:
Choleopus in Megalonychidae not
Bradyrodidae

The nomenclature of genera and species follows Wilson and Reeder (1993), except in the following instances:

Balaenoptera bonaerensis is recognised as distinct from
B. acutorostrata
Ovis ophion is included as
O. orientalis ophion rather than
O. aries ophion.

The following are cases where an animal has been named twice, based on the domestic form and the wild form. CITES has decided to adopt the name of the wild form in each case so that trade in the domestic form is excluded from the provisions of the Convention. Accordingly domestic forms are not listed in this checklist.

Equus africanus is recognised as distinct from *E. asinus*
Equus przewalskii is recognised as distinct from *E. caballus*

Bos frontalis is recognised as distinct from *B. gaurus*

Bos grunniens is recognised as distinct from *B. mutus*

Bubalus bubalis is recognised as distinct from *B. arnee*

Alternative names used in Honacki *et al.* (1982) and Corbet and Hill (1991) are also included as synonyms.

Common names

Common names (in English, French and Spanish where available) appear on the line immediately following the scientific name and synonyms.

The English common names used are taken from Wilson and Cole (2000), Corbet and Hill (1991), from the *IUCN Red Data Book* series and from a number of standard reference works for the mammals of particular regions. Secondary English common names have been included wherever this was considered useful, including non-English names commonly used by English speakers. For the Cetacea, the common names used in Watson (1981), have also been included.

Spanish and French names have been taken from the CITES Identification Manual Series and other sources.

Other information

The three columns headed CITES, EC Reg. and RL list the following information for each taxon.

CITES

I, II or III in this column refers to the appendix in which the taxon is listed under the Convention on International Trade in Endangered Species of Wild Fauna and Flora.

NC = non-CITES

The two-letter abbreviations following Appendix III entries denote the countries whose governments have placed the taxon in this appendix, as follows:

BW	Botswana
CA	Canada
CR	Costa Rica
GH	Ghana
GT	Guatemala
HN	Honduras
IN	India
NP	Nepal
TN	Tunisia
UY	Uruguay

EC Reg.

The letters in this column refer to the annex of EC Regulation 338/97 in which the taxon is listed.

NR= non Regulation.

RL

Threat categories follow those given in the 2002 *IUCN Red List* and are as follows:

EX	Extinct
EW	Extinct in the Wild
CR	Critically Endangered
EN	Endangered
VU	Vulnerable
LR	Lower Risk
LR/cd	Lower Risk/Conservation dependent
LR/nt	Lower Risk/Near threatened
LR/lc	Lower Risk/Least concern
DD	Data Deficient
NE	Not Evaluated

Geographical Range

The geographical range of each taxon is generally given in terms of political units arranged alphabetically. Small island dependencies are also listed alphabetically.

Place-names and names of countries follow the *Times Atlas Atlas of the World* (1990) and United Nations (1993).

It should be noted that, when a species is listed as occurring within a given area or range state, it may not occur throughout that country or area, and may be confined to only one or a few localities. This is particularly true for migratory species.

Without surveying the range of each taxon in the field, it is necessary to rely on published records. Many taxonomic works give the range of a taxon in terms of broad geographical areas, rather than of political units. While some countries have a relatively well-known and well-reported mammalian fauna, some others do not. These factors may occasionally have resulted in some of the geographical ranges given here being incomplete or inaccurate, although every effort has been made to prevent this.

For Cetacea, geographical ranges are first expressed in terms of oceans, seas, and rivers where the taxon is known to occur or to have occurred. Published sources may not distinguish live and dead cetacean records, but all records have been included. Most cetaceans are widespread but coasts of some countries within their overall range may be avoided for physical, chemical or ecological reasons. Only confirmed sightings are included and taxa may occur in political units other than those named within their overall range.

Distribution notes

A question mark '?' preceding a geographical range has been used to indicate that there is some uncertainty in the occurrence of the species in that range.

A country where the species is known to be extinct is denoted by '(ex)'; a country where there is still a possibility that the species survives (for instance because recent searches have been unsuccessful) is denoted by '(ex?)'.

Range states where the species has been introduced are denoted by '[int]'. Range states where the species has been re-introduced are denoted by '[re-int]'.

References

The numbers in the right-hand column refer to entries in the reference list at the end of this document. Many of these are general works relevant to more than one geographical range or concerned with particular groups of species. Single country faunas and more specific references have generally been inserted in brackets after the appropriate country in the listings for geographical range.

Dependent territories

In the text, parent countries of island groups or dependent territories are omitted. These are listed below:

American Samoa, USA	Queen Maud Land, Norway
Anguilla, United Kingdom	Réunion, France
Aruba, Netherlands	Saint Helena, United Kingdom
Ascension Island, United Kingdom	Saint Pierre and Miquelon, France
Azores, Portugal	South Orkney Islands, United Kingdom
Bermuda, United Kingdom	South Sandwich Islands, United Kingdom
Bouvet Island, Norway	South Georgia, United Kingdom
British Antarctic Territory, United Kingdom	South Shetland Islands, United Kingdom
British Indian Ocean Territory, United Kingdom	Svalbard and Jan Mayen Islands, Norway
British Virgin Islands, United Kingdom	Tokelau, New Zealand
Canary Islands, Spain	Tristan da Cunha Islands, United Kingdom
Canton and Enderbury Islands, Kiribati	Turks and Caicos Islands, United Kingdom
Cayman Islands, United Kingdom	Virgin Islands of the United States, USA
Channel Islands, United Kingdom	Wallis and Futuna, France
Christmas Island, Australia	
Cocos (Keeling) Islands, Australia	
Cook Islands, New Zealand	
Falkland Islands, United Kingdom	
Faeroe Islands, Denmark	
Federated States of Micronesia, USA	
French Guiana, France	
French Polynesia, France	
French Southern and Antarctic Territories, France	
Gibraltar, United Kingdom	
Greenland, Denmark	
Guadeloupe, France	
Guam, USA	
Guernsey, United Kingdom	
Hawaiian Islands, USA	
Heard and Macdonald Islands, Australia	
Isle of Man, United Kingdom	
Jersey, United Kingdom	
Johnston Atoll, USA	
Macao, Portugal	
Macquarie Island, Australia	
Madeira, Portugal	
Marshall Islands, USA	
Martinique, France	
Mayotte, France	
Montserrat, United Kingdom	
Netherlands Antilles, Netherlands	
New Caledonia, France	
Niue, New Zealand	
Norfolk Island, Australia	
Northern Marianas, USA	
Palau, USA	
Panama Canal Zone, USA	
Pitcairn Islands, United Kingdom	
Puerto Rico, USA
