

Michael Semak - Clip 14

The Role of Photography

The role of photography in our society, I would say in any given society, would be, what, to inform, inform people about this, that existed, this person exists, this situation happened. So I guess it's a listening post, but with the lens rather than with the ear. Also it's part of our culture, it's something creative. This person used a camera, rather than a paintbrush, or a hammer, or a piano, piano keys, to create something. So it's a work of art, in quotes, whatever that would be, big or small "a." And it's information, and I think that's about it. Creativity and information.
