CSA_BEG This is the beginning of the Select Child block

CSA_IMP Import the following variables:
TargChildName = name of the target child from the sample file.
TargChildAge = age of the target child from the sample file.
STRAT_AGE = age stratum from the sample file.
SAMPLE = sample flag from the sample file.

CSA_C01 If SAMPLE = 1 goto CSA_END;
Else if SAMPLE = 2 and there are no qualified children in the household then Hard Code outcome code 40 – final (out of scope) and goto CSA_END (TY block).

The sample file will contain the name and age of a "targeted child" for selection. It is possible that the spelling of this child's name on the sample file will differ from that in the application; it is also possible that the child no longer lives at this address; it is possible that the sample file information is wildly inaccurate.

These rules favour the selection of the "targeted child", but allow for a different child to be selected if the targeted child cannot be found in the member list, or whose age is very different from what was expected. The age of the targeted child is actually more important than the name.

TargChildName is the name of the targeted child, as found on the sample file;
TargAge is the age of the targeted child, as found on the sample file.
STRAT_AGE is the desired age stratum.

Select a target child based on the following criteria, which are presented in order of importance (1 being the most important).
The child must be < 18 years old.
AND The respondent to the child relationship must be one of the following: Mother, Father, Mother's partner, Father's partner, or Grandparent.

1. Same name as TargChildName and same age as TargAge,
2. Same name as TarChildName and age is included in STRAT_AGE
3. Age same as TargAge
4. Age included in STRAT_AGE
