

David Robinowitch - Clip 4

## Fluid sheet constructions

The *Fluid Sheet* construction that you ask about is constituted of 20 separate sheets: 10 as a supporting order, below, and 10 as a supported order, above. The whole sculpture is further organized around 3 rankings, each with the same number of supporting and supported sheets. There is a remote analogy here between such a conformation and a certain complex quantity at the center of Einstein's theory of gravity called the Riemann-Christoffel curvature tensor, vector-like magnitude of 20 independent components, of which 2 groups of 10 are themselves quantities that operate, in some essential respects, like the whole.
