b. Instructions for reporting % of school week:

To obtain consistency in reporting between schools operating on different cycles (e.g. week, 6-day cycle, 7-day cycle, etc.), the calculation of the percentage of French (English in Quebec) instruction is based on each school's own cycle.

If your school does not function with timed periods, estimate the percentage of the school week (on a 5-day cycle basis) that the students are studying French (English in Quebec) and report it in the appropriate column.

With respect to total minutes in a cycle, a school day represents the total minutes allocated to the teaching of the structured learning program (you must not include recess, lunch, or after class study supervision activities).

Calculation for % of French (English in Quebec) by school week = $\frac{\text{total minutes French (English) per cycle}}{\text{total minutes in cycle}} \times 100$

Example: French (English) is offered for four 45-minute periods in a 5-day cycle. The percentage is calculated as follows (based on a 300-minute school day):

$$\frac{45 \text{ (min./period)} \times 4 \text{ (periods/week)}}{1500 \text{ (300 min./day} \times 5 \text{ days)}} \times 100 = 12.0$$

If semestered, divide above % by 2. e.g., % of school week = $\frac{12.0}{2} = 6.0$
