Canada

connect to companies, technologies,  
and abundant opportunity

The Kyoto Protocol has added greater stimulus to Canada's \$3 billion climate change and clean energy sector. This rapidly growing and highly advanced industry delivers technologies and services on par with competitors found anywhere in the world.

Now you can make connections to this burgeoning sector with a unique and authoritative online resource: The *cleanenergy.gc.ca* portal.

Use this dynamic and leading-edge gateway to:

- Survey and contact Canada's energy technology firms (there are currently more than 600)
- Locate and leverage financing resources for technology export through Canadian, international, and local (host country) entities
- Identify key technologies and government resources central to clean energy and climate change
- Research Canadian and international climate change initiatives (and Canadian resources available beyond our borders)

search a powerful directory of  
Canada's energy innovators

The *cleanenergy.gc.ca* portal offers an insightful look at Canadian firms on the leading edge of:

- Climate change services
- Conventional power generation technologies
- Renewable / alternative power generation technologies
- Alternative fuels
- Transportation technologies
- Industrial energy systems
- Building systems

The *cleanenergy.gc.ca* portal is an initiative of the Government of Canada and is hosted and maintained by the CANMET Energy Technology Centre, Natural Resources Canada.
