Aircraft Movement Statistics, Monthly

February 2007

Transport Canada, TP 1496, ASC-SB-338

Airports with NAV CANADA Air Traffic Control Towers

The 42 Canadian airports with NAV CANADA air traffic control towers reported 309,991 aircraft take-offs and landings in February, up 3.3% compared with February 2006 (300,182 movements). This marked the ninth consecutive increase in year-over-year monthly comparisons. Year-over-year increases in aircraft movements were reported by 25 of these airports in February 2007. The variations ranged from 72.8% for Moncton/Greater Moncton International to -26.6% for Thunder Bay.

Itinerant movements (flights from one airport to another) increased by 2.3% (+5,038 movements) in February 2007 compared with the same month a year earlier. Local movements (flights that remain in the vicinity of the airport) increased by 15.0% (+1,577 movements) in February 2007 compared with February 2006.

In terms of itinerant movements, the year-over-year variations for February ranged from a 62.3% increase (+1,874 movements) for Moncton/Greater Moncton International to a decline of 33.2% (-1,088 movements) for Pitt Meadows, British Columbia. Twenty-five airports recorded increases in itinerant movements compared to 29 airports in January 2007.

In terms of local movements, the year-over-year variations for February ranged from a 127.8% increase (+726 movements) for Regina International to a 57.0% decrease (-324 movements) for St-Jean, Québec. Eighteen airports recorded increases in local movements compared to 23 airports in January 2007.

The data in this bulletin represent preliminary monthly statistics for airports with NAV CANADA air traffic control towers.

More detailed statistics for airports with NAV CANADA air traffic control towers and flight service stations will be released in the Aircraft Movement Statistics monthly report (**TP141 - Volume 1**). Statistics for airports without air traffic control towers will appear in **TP 141 - Volume 2**. Upon release, the **TP141 reports** are available (free) on-line at <http://www.tc.gc.ca/pol/en/Report/tp141e/tp141.htm>.

For more information, or to enquire about the concepts, methods or data quality of this release, contact Aviation Statistics Centre, Statistics Canada (1-866-500-8400; fax: 613-951-0010). Internet: aviationstatistics@statcan.ca.

^p Preliminary

Data quality, concepts and methodology

Data source and methodology

Aircraft Movement Statistics are accumulated from data originating with air traffic control tower units. Because staff in these units are highly trained in factual observation and actual reporting, the entries into the data base are of a very high quality. To maintain uniformity in the reporting of source data, the Aviation Statistics Centre (ASC) issues air traffic control units with an "Air Traffic Designators" handbook (TP-143) showing the official Transport Canada aircraft type designators and the designators of various domestic and international air carriers. Data errors caused during transcription and transmission on the NAV CANADA Aircraft Movement Statistics (NCAMS) network are identified as part of the built-in editing procedures. Furthermore, extensive editing cycles are part of the computer processing programs. All identified errors are manually corrected by ASC editing staff.

Collection

The records are completed daily, based on a twenty-four hour clock running from zero hour to 23:59. The times recorded are Greenwich Mean Time (GMT); however, published statistics are shown in local times. The records are transmitted electronically to the Aviation Statistics Centre (ASC). The Aviation Statistics Centre maintains a data bank of current information on all registered aircraft. The storage of this information allows for a reduction in the reporting burden of the survey respondents and limits the element of human error associated with the preparation of source documents. The data in the bank include registered aircraft identifications and their corresponding aircraft types, gross take-off weights, types of power plant (piston, jet or turboprop); whether the aircraft are fixed wing, helicopters or gliders. The data also provide a basis for identifying type of flights (commercial, private and government) and the geographical area in which the flights take place. The data bank also includes an Airport file against which the airport category is checked; the reported runway is validated and the time difference between GMT and local is allocated.

Symbols

The following standard symbols are used in Statistics Canada publications:

.	not available for any reference period
..	not available for a specific reference period
...	not applicable
0	true zero or a value rounded to zero
0 ^s	value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
P	preliminary
r	revised
x	suppressed to meet the confidentiality requirements of the <i>Statistics Act</i>
E	use with caution
F	too unreliable to be published

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable, courteous, and fair manner. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on www.statcan.ca under About us > Providing services to Canadians.

Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.
