## Construction and housing

### Building permits

The Building Permits Survey (monthly) of Canadian municipalities collects data on the value of construction intentions for buildings in the non-residential sector and the number of dwellings authorized and value of construction projects in the residential sector. Building permit data are widely used as a leading indicator for the construction industry since the issuance of a building permit is one of the first steps in the construction process. The National Income and Expenditure Accounts are the centre of macroeconomic analysis and policy-making in Canada. They are a means by which Canadians can view and assess the performance of the national and provincial economics. The estimates of Flows and Stocks of Fixed Residential Capital represent the residual value of residential stock after correcting the value of these assets according to the specified depreciation function. The Investment in Non-residential Building Construction represents the spending value for enterprises and governments, for industrial, commercial and institutional buildings.

## Capacity utilization rates

Capacity utilization rates are measures of the intensity with which industries use their production capacity. Capacity use is the percentage of actual to potential output. The data are used by economic analysts in various Canadian government departments and agencies such as Statistics Canada, the Bank of Canada, Finance Canada, Industry Canada, and in provincial agencies, trade associations, universities and international organizations such as the OECD.

## Housing stock

The Building Permits Survey (monthly) of Canadian municipalities collects data on the value of construction intentions for buildings in the non-residential sector and the number of dwellings authorized and value of construction projects in the residential sector. Building permit data are widely used as a leading indicator for the construction industry since the issuance of a building permit is one of the first steps in the construction process. The estimates of Flows and Stocks of Fixed Residential Capital represent the residual value of residential stock after correcting the value of these assets according to the specified depreciation function.

## Demography

### Population estimates

These estimates programs are used in the calculation of demographic, social and economic indicators (nuptiality rates by previous marital status, divorce rates, legitimates birth rates, life tables by marital status, unemployment rates, school enrolment rates) in which the population, or a part thereof, serves as the denominator. In addition, the data helps in the determination of the annual level of immigration by the Government of Canada.

## Retail trade

The Monthly Retail Trade Survey collects sales and the number of retail locations by province and territory from a sample of retailers. Sales estimates obtained from retailers are a key monthly indicator of consumer purchasing patterns in Canada. The Monthly Survey of Large Retailers (LMR) provides a breakdown of national retail sales on the basis of commodities for a panel of about 80 large retail enterprises. The Quarterly Retail Commodity Survey (QRCS) collects detailed information about retail commodity sales in Canada. The Annual Retail Store Survey measures, on an annual basis, the operating and financial characteristics of domiciled independent and franchise establishments.

## Health - Canadian Community Health Survey

Please note that much of the Health data are available free of charge through the [Internet Publications](#) section of the Statistics Canada Web site. Health information from the Canadian Community Health Survey (CCHS) are released at the regional level every two years starting with the 2000/2001 data. National and provincial data are published on an occasional basis for other components such as the Survey on Mental Health and Well-being, and the Survey on Nutrition. This group also includes CCHS supplements such as the Health Services Access Survey.

### Econnections 2000

Econnections: Linking the environment and the economy, indicators and detailed statistics. This set of detailed statistics supports the Natural Resource Stock Accounts of the Canadian System of Environmental and Resource Accounts. The Natural Resource Stock Accounts measure quantities of natural resource stocks and the annual changes in these stocks due to natural and human processes. These accounts, which are recorded using both physical and monetary units, form the basis of the estimates of Canada's natural resource wealth. Tables include data on energy resources (natural gas, crude oil, crude bitumen, coal), mineral resources (potash, copper, gold, iron, lead, molybdenum, nickel, silver, uranium, zinc), and timber resources.

## Miscellaneous labour statistics

The data tables below are derived from the Corporations and Labour Unions Returns Act (CALURA) and from the Labour Force Survey. The terminated union statistics (279-0024 to 279-0028) were collected under the Corporations and Labour Unions Returns Act (CALURA), Part II which ended in 1995 with the repeal of the act. Starting in 1997, the Labour Force Survey (LFS) has been collecting monthly union data (see tables 282-0077 and 282-0078 in the Labour force survey section), which offer a variety of analytical possibilities unavailable in the CALURA series. The absence rates series (table 279-0029 to 279-0033) are derived from the Labour Force Survey (see the Labour force survey section below for the survey description and more data tables).

## Pensions

The Quarterly Estimates of Trusteed Pension Funds collects data on the assets of these funds and on their revenues and disbursements. The assets held by trusteed pension funds are second in size only to those of the chartered banks; their growth, therefore, impacts significantly on the accumulation of wealth by Canadians.

## Labour force survey

The Labour Force Survey (LFS) provides estimates of employment and unemployment which are among the most timely and important measures of performance of the Canadian economy. The main objective of the LFS is to divide the working-age population into three mutually exclusive classifications, employed, unemployed, and not in the labour force, and to provide descriptive and explanatory data on each of these categories.

## Manufacturing

### Annual survey of manufactures

The Annual Survey of Manufactures is a survey of the manufacturing industries of Canada conducted annually since 1917. Data collected include principal industrial statistics, such as shipments, employment, salaries and wages, cost of materials and supplies used, cost of purchased fuel and electricity used, inventories, goods purchased for resale and commodity data, including shipments or consumption of particular products. The Annual Survey of Forestry is a survey of the forestry industries of Canada conducted annually and is intended to cover all forestry establishments.

### Business conditions survey

This voluntary survey is designed to provide an advance indication of current trends for the manufacturing sector of the Canadian economy and is used by Industry Canada, Human Resources Canada, the Department of Finance, the Bank of Canada and the Canadian Manufacturing Association.

## Prices and price indexes

### Consumer price indexes

The Consumer Price Index (CPI) is an indicator of changes in consumer prices experienced by Canadians. The CPI is widely used as an indicator of the change in the general level of consumer prices or the rate of inflation. The Telecommunications Services Price Index (TSPI) measures change over time in the prices for wired long-distance telephone services provided by telecommunication carriers to their Canadian-based business clients. The Traveller Accommodation Services Price Index (TASPI) is a monthly series measuring the price change for short-term accommodation services. The Accounting Services Price Index (ASPI) collects information on the price of several accounting services such as auditing, taxation, and bookkeeping.

## Construction price indexes

Capital Expenditure Price Statistics provides measures of price change for four major categories: elements of construction costs, outputs of construction industries, capital expenditures and consulting engineering. Elements of construction costs include price indexes for unionized building trades. Measures of price change for outputs of the construction industry cover selected residential and non-residential buildings. Price changes for capital expenditures are provided by industry of purchase and commodities. Plant price indexes are included for two electric utility models. Measures of changes in prices of services provided by consulting engineers are also included.

## Farm input price index

The Farm Input Price Index (FIPI) measures the annual price movement of specified farm inputs at the farm gate. As such, the FIPI can be used to monitor price changes, which are considered in the operations of marketing boards and in price stabilization programs.

## Industry price indexes

The Informatics Professional Services Price Index (IPSPI) collects financial, wage and contractor fee information that is used to produce price indexes measuring changes in prices for informatics professional services such as hardware and software consultancy, computer facilities management, and system maintenance. The Industrial Product Price Index (IPPI) measures price changes for major commodities sold by manufacturers in Canada. The prices collected are for goods sold at the factory gate. As a result, the prices covered by the IPPI refer not to what a purchaser pays but to what the producer receives. The Electric Power Selling Price Index (ESPI) measures the price movements of sales of electricity by distributors to commercial and industrial users. The index is a useful measure of the

change in the cost of electric power to the non-residential customer.

### Current economic analysis

The Canadian Composite Leading Indicator is comprised of ten components which lead cyclical activity in the economy and together represent all major categories of Gross Domestic Product (GDP). It thus reflects the variety of mechanisms that can cause business cycles. The Monthly Survey of Manufacturing values of shipments, inventories and orders are used as indicators of the economic condition of manufacturing industries in Canada.

### Financial flow accounts

The Financial Flow Accounts show the financing of economic activity as measured in the System of National Accounts. The Financial Flow Accounts are an extension of the Income and Expenditure Accounts. The National Balance Sheet Accounts provide a stock dimension to the System of National Accounts. Incomes, expenditures, investments in financial assets and funds raised in a given period are cumulated to produce balances. These balances - assets, liabilities and net worth - are the result of economic and financial activity.

### Gross domestic product

The Input-Output Structure of the Canadian Economy in Current Prices represent the most detailed accounting of the Canadian economy available, and thus, serve as benchmarks to the Canadian System of National Accounts. The primary mandate of the statistical program, Provincial Gross Domestic Product by Industry, is to compile and disseminate current measures of Gross Domestic Product (GDP) by industry, at the provincial level. The Gross Domestic Product by Industry - Monthly provides information for current economic analysis, from an industry point of view. It also serves as a check of the Gross Domestic Product (GDP), income and expenditures, prepared by Income and Expenditure Accounts Division, and as an extension (on a monthly basis) of the System of National Accounts Input-Output Tables. Gross Domestic Product by Industry - Annual: estimates for calendar years of values of gross output, intermediate inputs and Gross Domestic Product (GDP) at factor cost in current and constant prices for over 400 industries and aggregations at the Canada-total level.

## Labour income

The Estimates of Labour Income are derived in order to supply the System of National Accounts (SNA) with the Labour Income component of the Gross Domestic Product (GDP). The data are used in macroeconomic analysis and forecasting, for policy analysis and for econometric modeling and hypothesis testing by federal and provincial government officials, business people, academic economists and international organizations. The National Income and Expenditure Accounts are the centre of macroeconomic analysis and policy-making in Canada. They are a means by which Canadians can view and assess the performance of the national and provincial economics.

## Provincial economic accounts

The Provincial Economic Accounts form a comprehensive and systematic tabulation of economic transactions in goods and services in a specified geographical area over a given period of time. The accounts portray, in a set of aggregate figures, the significant components of economic activity, the important transactions, and, when viewed over a period of time, the dynamic behaviour of major economic variables.

## Government finance, revenue and expenditures

Consolidated Government Revenue and Expenditure provides a nationally comparable set of statistics on the three levels of governments in Canada, after elimination of all inter- and intra-government transactions. The survey of Federal Government Finance - Estimates and Actual Data collects data from the federal government in Canada. The data are used by the Financial Management System to present actual and estimate statistics for federal departments and other entities deemed part of the government universe by Statistics Canada. The survey of Provincial Government Revenue and Expenditure - Estimates and Actual Data provides a nationally comparable set of statistics on revenue and expenditure on the three levels of governments in Canada. The survey of Local Government Current Revenue and Expenditure - Financial Management System Basis - Preliminary Data provides part of the information required by the federal government to calculate the equalization payment. The survey of Local Government Revenue and Expenditure - Financial Management System Basis - Actual Data provides part of the information required by the federal government to calculate the equalization payment, as well as data on revenue and expenditures of local government to the System of National Accounts. The survey of Federal Government Assets and Liabilities produces the balance sheet for the federal government and one of the benchmarks required by the System of National Accounts. The survey of Federal Government Business Enterprise Finance collects data from federal government enterprises. The data are used under the Financial Management System to present annual statistics on the finances of the federal government business enterprises for comparison between the federal and provincial levels. The survey of Local Government Assets and Liabilities (Preliminary and Actual Data) collects data from local governments, their boards, agencies and commissions. The data are used by the Financial Management System to present annual statistics on the finances of the local governments. The survey of Provincial Government Assets, Liabilities, Sources and Application of Funds produces the balance sheet for all provincial governments and one of the benchmarks required by the System of National Accounts. The

survey of Provincial Government Business Enterprise Finance collects financial data from provincial and territorial government enterprises.

## Transportation

### Air carriers

The Major Air Carriers Key Financial and Operating Statistics Monthly Survey collects the main financial and operating data from the Canadian air transport industry. The Air Carrier Operations in Canada Quarterly Survey collects both financial data (balance sheet, revenue and expenses statement) and operating data (hours flown, passenger-kilometers, goods tonne-kilometers) from the Canadian air transport industry. The Canadian Civil Aviation - Annual Report collects both financial data (balance sheet, revenue and expenses statement) and operating data (hours flown, passenger-kilometers, goods tonne-kilometers) from the Canadian air transport industry.
