1.0 Introduction

This logbook is the property of the apprentice and is a permanent record of the apprentice's progress through the Apprenticeship Program. The apprentice is responsible to ensure that this document is kept current and the required information is recorded properly.

Note: It is a punishable offence under the Apprenticeship and Trades Qualifications Act to falsify information in this document.

1.1 Apprentice Registration Details

Name:		
Client Identification Number:		
Effective Registration Date:	Anticipated Completion Date:	

It is the responsibility of the apprentice to immediately report the following:

- change of apprentice's home address and telephone number
- change of employer or employer's address and telephone number
- periods of extended unemployment

1.2 Contact Information

In Nova Scotia, the Power Engineer trade is a shared responsibility between the Department of Education and the Department of Environment and Labour.

For questions concerning the Apprenticeship Program or this document, the apprentice must contact the Industrial Training and Certification Officer assigned to his/her file or:

Apprenticeship Training and Skill Development division Department of Education P.O. Box 578, 2021 Brunswick Street Halifax, N.S. B3J 2S9 (902) 424-5651 - telephone 1-800-494-5651 - toll free telephone www.apprenticeship.ednet.ns.ca – website address

For questions concerning the examination or certification of provincial power engineers, contact:

Power Engineers section
Public Safety division
Department of Environment and Labour
P.O. Box 697, 5151 Terminal Road
Halifax, N.S. B3J 2T8
(902) 424-5721 – telephone
1-800-559-3473 – toll free telephone
www.gov.ns.ca/enla/equipmentsafety/engineer.asp - website address

1.3 Apprenticeship Program

Apprenticeship Explained

Apprenticeship is a model of learning in which trade experts (certified journeypersons) pass on knowledge and skills to learners (apprentices).

Apprenticeship begins with an agreement between an apprentice and an employer. The apprentice agrees to work for the employer in exchange for supervised, on-the-job training and experience, and the opportunity to attend technical training necessary to complete the program.

In the workplace, apprentices are supervised by a certified power engineer, tracking both hours and competence in practical skills. Technical training is offered online and/or in the classroom and is administered and arranged by the Apprenticeship Training and Skill Development division of the Department of Education.

Legislation

- Apprenticeship and Trades Qualifications Act and General Regulations Department of Education, Skills and Learning branch, Apprenticeship Training and Skill Development (ATSD) division.
- Power Engineers Act and Regulations Department of Environment and Labour, Public Safety division, Power Engineers section.

Progression Schedule

The power engineering skill levels are referred to as classes, with Fourth Class being the entry skill level and Second Class being the highest level of achievement within the Apprenticeship Program. A combination of technical training and on-the-job work experience, followed by successful completion of certification examinations, allows a Power Engineer to progress from one class to another.

Register as Apprentice	Requirements for Progression	Progress To
Fourth Class	 Complete 12 months (minimum of 2000 hours) of work experience in a registered steam boiler plant Complete technical training Demonstrate competence in mandatory practical skills Successfully pass certification examinations 	Third Class
Third Class	 Complete 12 months (minimum of 2000 hours) of work experience in a registered steam boiler plant Complete technical training Demonstrate competence in mandatory practical skills Successfully pass certification examinations 	Second Class
Second Class	 Complete 24 months (minimum of 4000 hours) of work experience in a registered steam boiler plant Complete technical training Demonstrate competence in mandatory practical skills Successfully pass certification examinations 	N/A

1.4 Roles and Responsibilities of Apprenticeship Stakeholders

Apprentice:

- ensure that the hours worked in the occupation, and the practical skills/tasks learned or completed, are accurately documented
- make this document available to the employer and representatives of the Apprenticeship Training and Skill Development (ATSD) division of the Department of Education
- remit tuition and other fees when required
- notify the ATSD division in writing within 15 days of changes to name or address
- notify the ATSD division in writing within 15 days if suspended by the employer, if employment ends, or if the employer does not provide you with practical experience or the opportunity to attend technical training

Supervising Power Engineer (Chief Power Engineer or delegated Shift Engineer):

- teach the apprentice the skills of the trade to the best of his/her ability
- evaluate the performance of the apprentice with the employer
- review, update and sign this document on a regular basis, particularly prior to the apprentice attending technical training

Employer:

- provide direct supervision for the apprentice by a certified power engineer
- remunerate apprentice as set out in the Trade Regulations or Collective Agreements
- evaluate the performance of the apprentice with the supervising power engineer on a regular basis
- accurately document the hours worked in the occupation and verify the practical skills/tasks completed by the apprentice
- allow the apprentice to participate in the required technical training, take examinations, and re-employ the apprentice upon completion of training
- ensure the daily hours of practical experiences do not begin or end later than the daily working hours of the supervising power engineer.
- ensure the working conditions of the apprentice are the same as the conditions of the supervising power engineer in the workplace where the apprentice is employed
- notify the ATSD division in writing within 15 days if the apprentice is suspended from the
 workplace, if the apprentice ceases to be employed, or if unable to provide the apprentice
 with practical experience or allow the apprentice to participate in technical training

Technical Training Institution:

- provide a quality learning environment and the necessary student support services to enhance apprentices' ability to be successful
- participate with other stakeholders in the continuous updating of technical training
- refer apprentices to the Apprenticeship Training and Skill Development division of the Department of Education to address questions regarding the Apprenticeship Program.
- refer apprentices to the Power Engineers section of the Department of Environment and Labour to address guestions regarding certification and examinations.
- ensure that apprentices' technical training experiences are accurately documented

Apprenticeship Training and Skill Development division, Department of Education:

- ensure that both the apprentice and employer are informed of their respective responsibilities in the program before the apprentice and the employer enter into an apprenticeship agreement
- ensure that all apprentices are appropriately registered and records are maintained
- schedule all necessary technical training for apprentices to complete requirements for certification
- maintain regular contact with the apprentice and employer throughout the term of the apprenticeship agreement to ensure successful completion of the apprenticeship program
- administer and enforce the Apprenticeship and Trades Qualifications Act and General Regulations

Public Safety division, Department of Environment and Labour:

- schedule all necessary examinations for apprentices to complete requirements for certification
- administer and enforce the certification of provincial power engineers
- administer and enforce the Power Engineers Act and Regulations

2.0 Supervising Power Engineer Information

The supervising power engineer (chief engineer, delegated shift engineer or approved instructor) is required to complete the information in the table below prior to recording completion of technical training or practical skills, and agree to the following declaration:

"As the supervising power engineer, I agree to record the accomplishments of this apprentice truly, accurately and to the best of my knowledge."

Employer Name or Technical	Supervising Power Engineer			Certificate of Qualification No.	
Training Institution	Print Name	Signature	Initials		
			A .		
-					

2.0 Supervising Power Engineer Information (Cont'd)

The supervising power engineer (chief engineer, delegated shift engineer or approved instructor) is required to complete the information in the table below prior to recording completion of technical training or practical skills, and agree to the following declaration:

"As the supervising power engineer, I agree to record the accomplishments of this apprentice truly, accurately and to the best of my knowledge."

Employer Name or Technical	Supervising Power Engineer			Certificate of Qualification No.

3.0 Technical Training

This section provides a record of the technical training currently required to successfully complete the Apprenticeship Program. The apprenticeship technical training courses cover the material outlined in the Standardization of Power Engineer Examinations Committee (SOPEEC) study units. The apprentice will be informed of any changes that may affect his/her program.

Upon successful completion of all apprenticeship technical training requirements within their classification, the apprentice will be awarded a pre-established credit of hours. For more information on pre-established credit of hours, refer to section 4.0.

3.1 How to Register for Technical Training

- Apprentice
 - Step 1: Review the current technical training schedule. If you do not have a copy, contact the Apprenticeship Training and Skill Development division to have one mailed, or obtain a copy from the website at www.apprenticeship.ednet.ns.ca.
 - Step 2: Discuss your registration into technical training with your employer and obtain employer's agreement to register.
 - Step 3: Contact the Industrial Training and Certification Officer assigned to your file to register for class. Training seats are allocated on a first-come first-serve basis, so it is important that you plan your technical training early.

3.2 Who is Eligible to Record the Completion of Technical Training?

- Apprenticeship Training and Skill Development division A representative of the Division may record initial credit of technical training and completion of technical training.
- Technical Training Institutions An approved instructor may record the completion of technical training.

3.3 How is the Completion of Technical Training Recorded?

- Apprenticeship Training and Skill Development division:

<u>Initial Credit of Technical Training</u> - In sections 4.4 and 4.5, record initial hours credited. In section 3.4, validate applicable apprenticeship technical training courses with "credit" stamp.

<u>Completion of Technical Training</u> – If an instructor has recorded all apprenticeship technical training courses within a classification as being successfully completed, the apprentice will be awarded a pre-established credit of hours. For more information on pre-established credit of hours, refer to section 4.0.

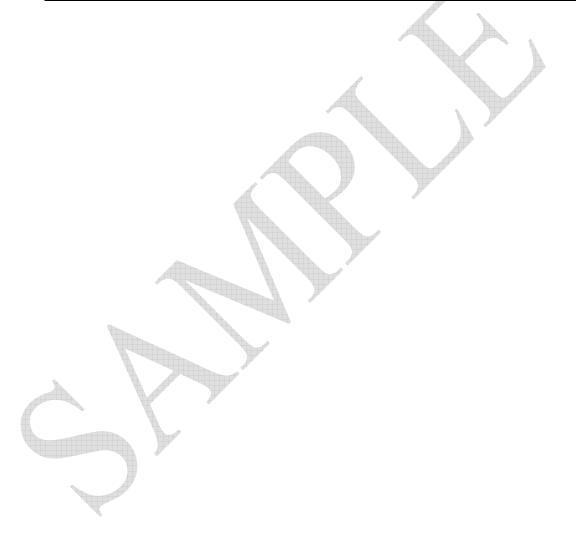

If an instructor has not recorded all successfully completed apprenticeship technical training courses, a representative of the ATSD division may sign off the training in section 3.4.

- Technical Training Institutions:

<u>Completion of Technical Training</u> - In section 2.0, complete supervising power engineer information. In section 3.4, record successfully completed technical training.

Example:

Nova Scotia Course	Atlantic Curriculum Units to be Covered	Nova Scotia Prerequisites	Successful Completion (Signature / Date)
PESC-1801 -	ASME Code Calculations		Richard Hammer
Industrial Legislation	Industrial Administration		Nov 19, 2007

3.4 Record of Technical Training Courses

This section of the logbook is to be completed by a representative of the Apprenticeship Training and Skill Development division of the Department of Education or by an approved instructor at the appropriate technical training institution upon successful completion of technical training.

Apprenticeship Courses	Covers Content of SOPEEC Recommended Study Units	Prepares for SOPEEC Examination Papers	Successful Completion (Signature/Date)

4.0 Time in Occupation

This section provides a record of the hours accumulated towards the completion of the Apprenticeship Program. Hours in the occupation consist of:

- initial hours credited
- hours of on-the-job training supervised by a certified power engineer
- hours of technical training

4.1 What are the Hourly Requirements for Apprenticeship?

- Fourth Class Power Engineer 12 months (minimum of 2000 hours). On-the-job practical hours must be acquired in a fourth class, or higher, registered steam boiler plant.
- <u>Third Class Power Engineer</u> In addition to holding a fourth class certificate, the apprentice must acquire an additional 12 months (minimum of 2000 hours). On-the-job practical hours must be acquired in a third class, or higher, registered steam boiler plant.
- <u>Second Class Power Engineer</u> In addition to holding a third class certificate, the apprentice must acquire an additional 24 months (minimum of 4000 hours). On-the-job practical hours must be acquired in a second class, or higher, registered steam boiler plant.

Note: Only hours identified as eligible will be credited towards the Apprenticeship Program. Eligible hours are detailed in Section 42 of the Power Engineers Regulations.

Questions regarding eligible hours should be directed to:

Power Engineers section
Public Safety division
Department of Environment and Labour
P.O. Box 697, 5151 Terminal Road
Halifax, NS B3J 2T8
(902) 424-5721 – telephone
1-800-559-3473 – toll free telephone
www.gov.ns.ca/enla/equipmentsafety/engineer.asp - website address

4.2 Who is Eligible to Record Hours Accumulated in the Occupation?

- Apprenticeship Training and Skill Development division A representative of the division may approve and record initial credit of hours and the pre-established credit of hours upon successful completion of apprenticeship technical training.
- Employer or Designate A chief power engineer or delegated shift engineer may record the hours worked on-the-job by the apprentice.

4.3 How are the Hours Recorded?

Apprenticeship Training and Skill Development division:

<u>Initial Credit of Hours</u> - In sections 4.4 and 4.5, record initial hours credited. If applicable, validate appropriate technical training courses with initial "credit" stamp" in section 3.4.

<u>Completion of Technical Training</u> - Upon successful completion of all apprenticeship technical training courses within classification, the apprentice will be awarded a preestablished credit of hours.

Note: A listing of pre-established credit of hours for apprenticeship technical training and other approved programs endorsed by the Department of Environment and Labour can be found under "approved programs" on the Power Engineers section website at www.gov.ns.ca/enla/equpmentsafety/engineer.asp.

If there is no pre-established credit of hours endorsed by the Department of Environment and Labour, or if the apprentice does not successfully complete all apprenticeship courses within their classification, the apprentice will be awarded a credit of 45 hours for each successfully completed apprenticeship course.

- Employer or Designate:

<u>On-the-job Practical Hours</u> - In section 2.0, complete supervising journeyperson information. In section 4.5, record the hours worked on-the-job by the apprentice. See ABC Power example below.

Note: The hours acquired on-the-job should be recorded in this document on a regular basis, particularly before the apprentice attends technical training or meets with a representative of the ATSD division or the Power Engineers section.

Example:

Plant Name / Technical Training	Employer Des	From (Y/M/D)	To (Y/M/D)	No. of Hours	Total Hours to Date	Apprenticeship Staff (Initial / Date)	
Institution	Print Name	Signature					
ABC Power	Nolan Clark	Nolan Clark	07/08/20	07/09/14	165	1125

5.0 Practical Skills

This section identifies the practical skills the apprentice is required to master prior to the completion of his/her apprenticeship. The industry-developed skills are identified by classification and are grouped into areas of competency.

5.1 Who is Eligible to Record Completion of Practical Skills?

The practical skills are to be evaluated at the apprentice's place of employment. A supervising power engineer in the occupation (chief engineer or delegated shift engineer) may sign off the completion of skills.

5.2 How is the Completion of Practical Skills Recorded?

A skills sign off system identifies which tasks have been performed and whether industry standards have been met.

If the apprentice has demonstrated his/her ability to competently perform a practical skill without extensive supervision or assistance, complete the following instructions:

- Step 1: If clarification of the practical skill is required, detail the task or tasks performed in the column entitled "tasks performed to demonstrate skill".
- Step 2: Supervising power engineer must sign, date and provide their Certificate of Qualification number (CQ #) in the column entitled "meets industry standards".
- Step 3: Apprentice must initial and date the skill in the column entitled "meets industry standards".

Each practical skill is identified as being either mandatory (M) or optional (O). The apprentice must demonstrate his/her ability to perform all mandatory practical skills within their classification.

When an apprentice has mastered all mandatory skills in an area of competency, the chief engineer must sign in the signature block provided.

Note: If a mandatory skill is found to be impractical in a registered steam boiler plant, the apprentice may contact the Industrial Training and Certification Officer assigned to his/her file to request an exemption.

The Industrial Training and Certification Officer will forward the request to the Inspector Examiner of the Public Safety division of the Department of Environment and Labour for review and approval.

5.3 Record of Practical Skills

Each practical skill is identified as being either mandatory (M) or optional (O). The apprentice must demonstrate his/her ability to competently perform all mandatory practical skills within their classification without extensive supervision or assistance.

Area of Competency A - Occupational Skills

			Tasks Performed to Demonstrate Skill		Meets Industry Standard	s

6.0 Certification Examinations

The examination of power engineers in the Province of Nova Scotia is the responsibility of the Power Engineers section of the Department of Environment and Labour.

The following certification examinations (referred to as interprovincial examinations) are required for each classification:

- Fourth Class Power Engineer (2 examinations: papers A and B)
- Third Class Power Engineer (4 examinations: papers A1, A2, B1 and B2)
- Second Class Power Engineer (6 examinations: papers A1, A2, A3, B1, B2 and B3)

A representative of the Department of Environment and Labour will determine eligibility to write the certification examinations based on the following requirements:

- completion of required apprenticeship technical training (proof of training may include a copy of the signed courses in logbook, a transcript of marks, etc.)
- accumulation of required hours in a registered plant (hours must be in accordance with Section 42 of the Power Engineers Regulations)

Before writing the certification examinations, it is recommended that the apprentice review the examination syllabus, reference material and sample questions available on the Standardization of Power Engineer Examinations Committee (SOPEEC) website at www.sopeec.org.

Questions regarding certification examinations and eligibility requirements should be directed to:

Power Engineers section
Public Safety division
Department of Environment and Labour

7.0 Program Completion

Upon completion of all apprenticeship training requirements within appropriate classification (technical training, time in occupation and practical skills), the apprentice must contact the Industrial Training and Certification Officer assigned to his/her file to review and update this logbook and enter completion information into the apprenticeship database.

Upon successful completion of all required certification examinations, the Public Safety division of the Department of Environment and Labour will issue a Nova Scotia Certificate of Qualification with an Interprovincial Seal put on the certificate. With the Interprovincial Seal endorsement, the certified power engineer is able to legally work anywhere in Canada (upon registering with the new province or territory), without the need for further training or examination.

Upon confirmation from the Public Safety division of the Department of Environment and Labour that the apprentice has achieved certification, the Apprenticeship Training and Skill Development division of the Department of Education will issue a Nova Scotia Certificate of Apprenticeship.

Note: Only apprentices who have completed all apprenticeship training requirements will be issued a Certificate of Apprenticeship.

8.0 Review by Apprenticeship Staff

This section must be completed each time this document is reviewed and updated by a representative of the Apprenticeship Training and Skill Development division.
