highlights

a weekly digest of recently released British Columbia statistics

Population

During the first quarter of this year, BC gained a total of 6,497 people as a result of net migration from all sources. This compares to an increase of 3,104 in the first quarter of 1999. There was a net outflow of 3,215 people from BC to the rest of Canada, with a net loss of 2,553 people to Alberta and 662 to Ontario. Atlantic Canada (309) and Manitoba (190) also drew more people from BC than they lost to this province during the first quarter. Although the outflow of people from BC to other provinces was smaller than at the beginning of last year, interprovincial migration to BC has fallen off after showing signs of a recovery in the second half of 1999.

Net international migration to the province increased by 23% from the first quarter of 1999, with a net inflow of 9,712 people. An unusually large increase in the number of non-permanent residents (e.g., foreign students living in the province on a temporary basis) was responsible for much of the increase. *Source: BC STATS*

- On a seasonally adjusted basis, net migration from all sources fell 29% between the fourth and first quarters, after increasing for five consecutive quarters. Lower net interprovincial migration was the main contributor to the weakness. Source: BC STATS
- BC's population stood at 4.052 million on April 1st, up 0.9% from a year earlier. Alberta (+1.4%), Ontario (+1.3%) and PEI (+1.1%) all experienced faster population growth. Canada's population also grew 0.9% during this period, increasing to 30.7 million. *Source: Statistics Canada*

The Economy

Exports of BC products were 9.0% higher this April than in the same month last year. Strong international shipments of industrial goods (+26.1%) and machinery and equipment (+8.8%) helped boost BC's overall export performance in April. Forest product exports were up a relatively modest 7.3%, well below the increases seen during most of the last year.

Canadian exports rose 12.5%, reflecting gains in every province. Newfoundland led the country, with exports more than doubling (+114.4%), largely due to offshore oil production and rising petroleum prices. Energy-rich Alberta saw exports soar 58.8%, as international shipments of energy products from that province nearly doubled (+82.3%) in value, increasing to \$2.2 billion. This was just slightly less than the total value of industrial goods exported from Ontario (\$2.3 billion) in that month. BC's exports of all goods totalled \$2.6 billion in April. Source: Statistics Canada

Retail sales in the province edged up 0.2% (seasonally adjusted) between March and April. The modest increase was the third in as many months, suggesting that retail sales in the province may be starting to stabilize after seesawing up and down during the last two years. Nationally, sales fell 1.2% in April. Retailers in most parts of the country did not fare particularly well. PEI (+2.9%), Alberta (+0.9%) and Yukon (+0.7%) were the only regions where sales advanced significantly. Canadian clothing (-3.2%) and automotive (-3.4%) retailers were most affected by the slowdown, but sales at other stores (the retail group including lawn and garden centres, hardware stores and sporting goods stores) were also down (-0.9%) in April. Cool spring

Socioeconomic Indicators

Did you know...

Canadians used their cars for 92% of the 145.4 million trips they took inside Canada in 1999. Those who didn't drive were nearly twice as likely to fly (6.1 million trips) as to travel by bus (3.8 million). Trains, boats and other means of transportation were used on 1.9 million trips.

weather may have been a factor. Source: Statistics Canada

- Wholesale sales in BC fell 0.6% (seasonally adjusted) in April after advancing 2.2% in the previous month. Canadian sales were flat (-0.2%) after posting a healthy 2.0% gain in March. Building suppliers continued to feel the crunch, as sales of lumber and building materials (-8.5%) fell sharply. Wholesalers of metals, hardware, plumbing and heating equipment and supplies (-3.4%) were also affected by softer demand for their products and farm machinery and equipment sales were off 5.4%. A brisk trade in consumer products such as computers and software (+4.2%) and household goods (+2.8%) helped offset this weakness. *Source: Statistics Canada*
- The number of regular employment insurance (EI) recipients in British Columbia fell 2.0% (seasonally adjusted) between March and April. There were 51,460 people receiving regular benefits in April. Nationally, the number of beneficiaries was down 1.3%, falling to 465,470 as the number of people receiving EI benefits declined in all but three regions. Source: Statistics Canada

Alcohol Sales

British Columbians don't seem to be drowning their sorrows in drink quite as much as they used to-or perhaps they're making more home brews. Last year, per capita sales of alcoholic beverages by liquor stores, wineries and breweries in BC slipped 1.6%, to 101.8 litres per person, just below the national average of 102.6 litres. Beer continued to dominate the market (81.0 litres), followed by wine (13.8 litres) and spirits (7.0 litres). Joe Canadian guzzled 85.3 litres of beer in 1999, most (93%) of it made in Canada. He also purchased 11.2 litres of wine and 6.1 litres of spirits.

Among the regions, alcohol sales were highest in Yukon, at 173.8 litres per person aged 15 and over. Albertans (111.5 litres) and Quebecers (111.1 litres) were next on the list in terms of per capita sales. Per capita alcohol sales were lowest in Saskatchewan (85.5 litres). *Source: SC, The Daily*

The Importance of Nature to Canadians

In 1996, 20 million Canadians spent \$11.0 billion pursing nature-related activities on special trips or around their homes. Of this total, \$7.2 billion was spent on outdoor activities in forests, water bodies and other areas, \$1.3 billion on wildlife viewing, \$1.9 billion for recreational fishing, and more than \$800 million on hunting. Another \$1.2 billion of their spending represented activities such as contributions to nature and conservation organizations. BC residents spent \$1.9 billion on nature-related activities in 1996, most (\$1.3 billion) of it on outdoor activities.

Per capita spending by BC residents who participated in outdoor nature-related activities was the second highest in the country, at **\$902 in 1996**. Spending was lowest in Atlantic Canada and Quebec, and increased steadily moving from east to west across the country.

People who lived in Yukon had the highest expenditures (\$1,298 per participant). The Canadian average was \$704 per person.

Spending on wildlife viewing averaged \$420 per participant in BC, and \$297 nationally. Over half of this money was used to purchase binoculars or recording equipment. Recreational fishing cost an average \$462 per person nationally. Anglers from Manitoba (\$762), Saskatchewan (\$557) and BC (\$545) had the highest per capita expenditures in the country. Hunting enthusiasts in BC (\$1,017), Yukon (\$901) and Alberta (\$843) also spent considerably more than the Canadian average of \$692 on their sport. Source: Environment Canada The Importance of Nature to Canadians

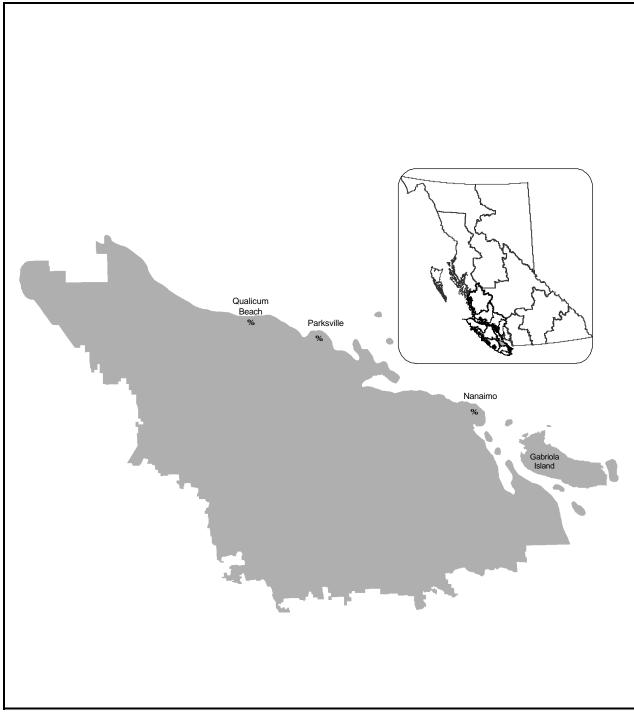

Tourism

• Canadians made 56.2 million pleasure trips in 1999, accounting for 39% of all domestic travel. Another 51.1 million trips (35%) were taken to visit friends and relatives. Canadians spent an estimated \$19.8 billion travelling inside the country last year, 41% of which was for food and accommodation. Source: SC, The Daily

Socio-Economic Indicators

The June 2000 release of *Socio-Economic Statistical Profiles of BC Regions* provides the most current possible take on a variety of indicators. Each region is covered in a 4-page section. The Nanaimo regional district profile from the latest release is included in place of a Report in this issue of Infoline. This same area will be featured as a sample on our Web site. Follow the **News** announcement found on our home page. To order, please contact Kris Ovens at:

Tel: (250) 387-0359 FAX: (250) 387-0380

British Columbia High Tech Input Indicators, the 1990's

This companion to the recently released "Profile of the British Columbia High Technology Sector" contains forty-two indicators related to the development of the high technology sector. The indicators track the performance of the education, business, government, labour, and external sectors in supplying trained personnel, financing, information, etc. in support of high technology industries in the province. For the first time, these indicators have been assembled for comparison on a consistent basis across provinces, with Alberta, Ontario, and Quebec featured along with British Columbia in the report. The "Profile" report is available now at the BC Stats web site. "Indicators" will be released June 28th. Go to
