### MANITOBA FLOODWAY AUTHORITY RECEIVES COR SAFETY CERTIFICATION

**Winnipeg, MB** – Today, the Manitoba Floodway Authority (MFA) was awarded the Certificate of Recognition (COR) Program accreditation by the Construction Safety Association of Manitoba.

“The MFA is very pleased to receive COR certification,” said Ernie Gilroy, CEO of the MFA. “We hope that our commitment to safety is an example for contractors working on the floodway project and the construction industry at large.”

“The floodway expansion project is a major construction project and MFA’s commitment to safety sends an important message to the entire industry,” said Sean Scott, Director of the Construction Safety Association of Manitoba. “As one of the first project owners to receive COR certification, we congratulate the Manitoba Floodway Authority.”

The Certificate of Recognition (COR) Program is an occupational health and safety certification program for construction industry employers aimed at reducing the human and financial costs associated with workplace accidents and injuries. Designed to assist companies in the development and maintenance of a company-wide safety program, the COR Certification is the highest distinction available in the industry - nationally recognized as the ultimate distinction for construction companies.
