# 1.0 Summary of Traffic Data Collection Activities and Analysis

---

## 1.1 Background

The Northwest Territories highway network consists of 2200 kilometres of all-weather roads and 1400 kilometres of winter roads. The highway system also includes five vehicle ferries. A map of the highway network is provided in Figure 1. A detailed listing of the highway system classification by surface type is provided in Table 1. It is noted that, in addition to the above, there are a number of winter roads constructed by mining companies to facilitate mine resupply.

The Department of Transportation of the Government of the Northwest Territories is responsible for operation and maintenance, capital rehabilitation, and upgrading of the Northwest Territories highway network. To monitor traffic utilizing the highway system, the Department of Transportation operates a series of mechanical counters and conducts periodic visual counts and surveys. Supplementing this information is data from the weigh scales and usage logs from the five ferries. Information obtained is used by the department to monitor changes in traffic flows, classify highways, set priorities in maintenance and capital funding, monitor safety aspects of the highways and optimize engineering designs. Traffic data is also used by businesses and the general public as the need arises.

This report presents traffic data collected by the Department of Transportation on the territorial highway network from 1993 to 2006. This report includes traffic information collected on major highways, access roads, winter roads and associated ferry crossings. The report also contains information on vehicle classifications.

## 1.2 Traffic Data Collection System

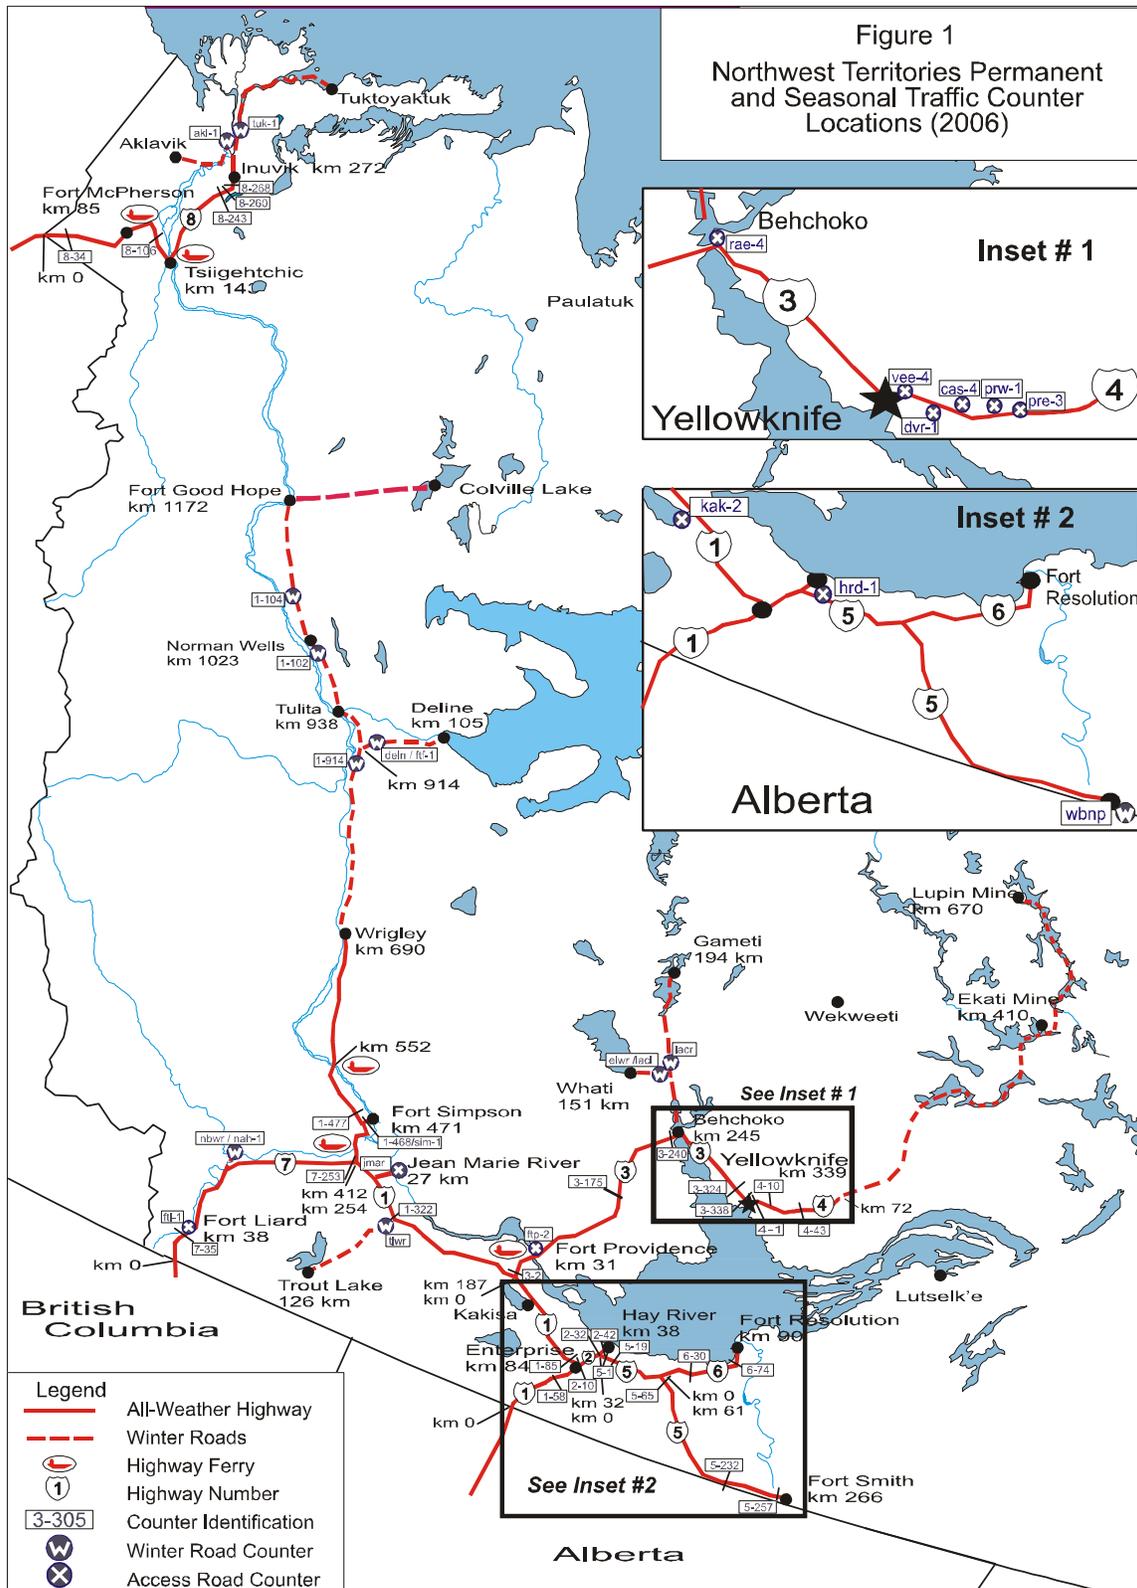

The Northwest Territories' Department of Transportation collects traffic at a number of permanent and seasonal counting stations as shown in Table 2 and illustrated in Figure 1. These stations provide hourly information on traffic for the complete year, or selected portions of the year for counters located on winter roads or other seasonal access roads. These stations are positioned to capture the general flow of traffic on the highway network.

Vehicle classification information is collected at the five ferries that operate on the highway system. The Marine Services Division of the Department of Transportation is responsible for collecting and processing this information.

Special turning movement counts at select intersections and visual vehicle classification counts are also conducted annually or as need arises. No manual counts were undertaken in 2006.

Information on truck volumes and commodities is obtained from the weigh scale in Enterprise. Truck volumes utilizing private (mining) winter roads is also collected and presented in this report.

In 2006, less than 50 percent of all potential data was useable for determining traffic volumes. This performance is attributed to the age of the traffic counters, breakdown of the loops and malfunctioning data modules, but represents a significant improvement since 2004. Where data was missing, traffic volumes have been estimated, based on previous years' data and information from other sources such as vehicle movements at ferries and weigh scales. The Department is working to improve data collection activities, including the purchase of new counters and loops and the installation of temporary counters.

**Table 1 Highway System Classification (2006)**

Classification	Length (kilometres)					Total
	Paved	Dust- Controlled Gravel	Untreated Gravel	Ferry Crossing	Winter Road	
<b>All-Weather Highways</b>

### 1.3 Traffic Data Processing

The permanent traffic counters located throughout the Northwest Territories highway network collect traffic data on a continual basis. This data is stored to memory every hour. Approximately once per month, personnel working out of the highway maintenance camps download the data to a module, clear the internal memory of the counter, and send the downloaded data to the Transportation Planning and Policy Division.

Personnel with the Transportation Planning and Policy Division download the data from the module to the government network in a flat file (ASCII format) and conduct a first level screening of the data. Any problems are noted and corrupt data is disregarded. The data is then copied into a Microsoft Excel spreadsheet and analysed to obtain the information presented in this report.

The first step in the analysis of the traffic data is to check for completeness and accuracy. Common problems include missing data due to the counter or module not functioning correctly, overlapping or missing data between months, and counts too high or low due to counter malfunctions. To ensure accurate results and also provide as much information as possible, a series of procedures has been established to correct deficiencies in the data. These steps are outlined in Appendix B.

### 1.4 Glossary of Terms

**Average Annual Daily Traffic (AADT)** is an estimate of the mean daily traffic for a period of one year.

**Average Daily Traffic (ADT)** is an estimate of the mean traffic for a specified period of time. For example, monthly ADT is an estimate of the mean daily traffic for a specified month.

**Growth Rate** is the increase or decrease in AADT from year to year.

**Near Urban Highway** is a section of highway located within or near a major urban centre.

**Peak Summer Average Daily Traffic (PSADT)** is an estimate of the mean daily traffic for the months of June, July and August.

**Permanent Traffic Counter** is a counter that is permanently placed at a specific location and counts traffic continuously.

**Rural Highway** is a section of highway located away from the traffic influence of a major urban centre.

**Short Term Counts** provide measurements of traffic characteristics based on visual observation for a specified period of time and purpose.

**Traffic distributions** illustrate how traffic varies over time. Distributions may be by month, by day of the week or hourly, and is usually measured as a percent of the AADT.

**Vehicle Classification** is the distribution of vehicle types in a traffic stream.

**Vehicle Kilometres Travelled** is the total number of vehicles for a specific road segment multiplied by the length of the road segment.

## **1.5 Layout of the Report**

This report is organized into four sections.

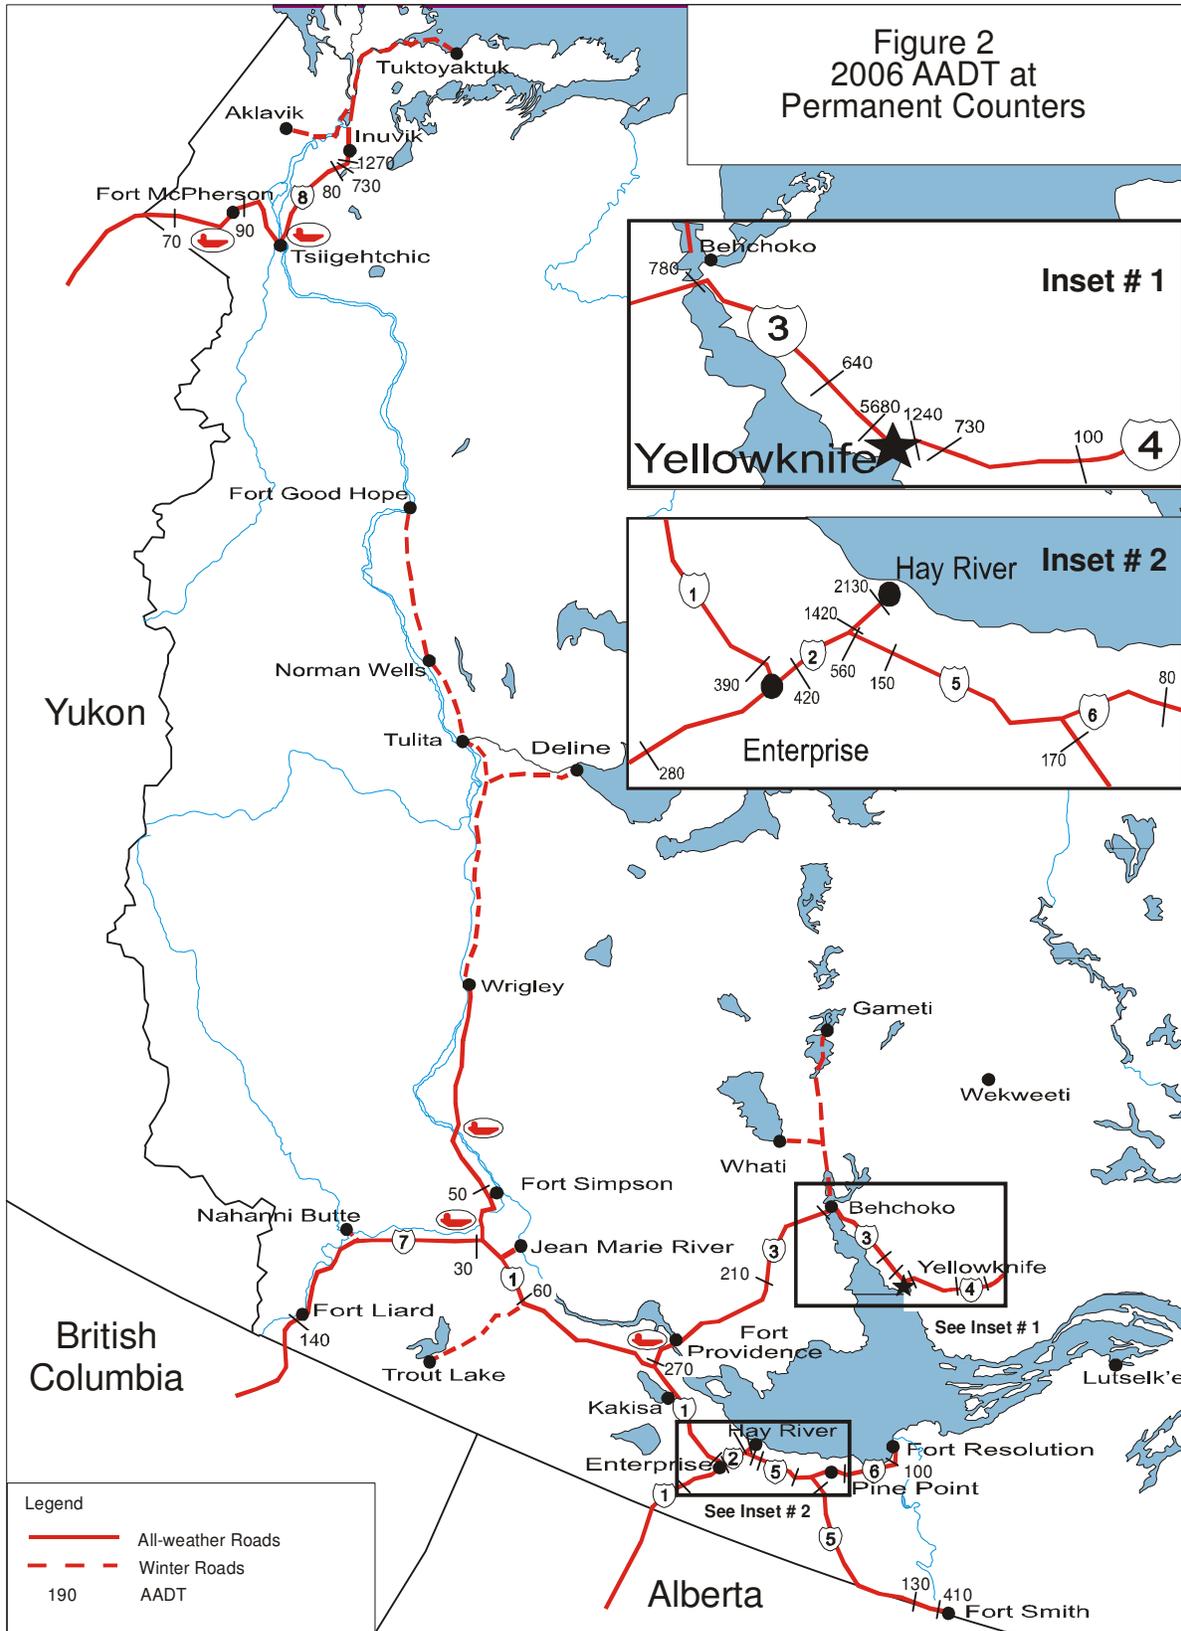

Section 1 provides an introduction to the Northwest Territories traffic data collection system.

Section 2 presents the traffic information collected at all permanent counter locations and selected mining roads; including traffic volumes, distributions and vehicle kilometres travelled.

Section 3 presents traffic information collected on highway ferries, and commercial vehicle activity from the weigh scales.

The Appendices present additional detailed traffic information.

Figure 2

**Table 7 Truck Traffic on the Tibbitt to Contwoyto Winter Road**

		Lupin Mine <sup>(1)</sup>	BHP Diamonds Ekati Mine	Diavik Diamond Mines Inc.	DeBeers Snap Lake	Tahera	Mineral Exploration Traffic	Total
2007	Total Tonnage	2,059	121,716	133,267	64,505	17,566	4,172	343,285
	Total Trucks	55	3,937	4,573	2,355	500	236	11,656
2006 <sup>(2)</sup>	Total Tonnage	1,071	82,447	55,750	34,852	7,821	2,435	184,376
	Total Trucks	35	3,152	2,094	1,623	258	148	7,310
2005	Total Tonnage	7,709	117,661	94,303	18,089		14,771	252,533
	Total Trucks	251	3,434	2,848	703		614	7,850
2004	Total Tonnage	11,097	105,127	53,960	6,852		2,108	179,144
	Total Trucks	288	2,984	1,572	295		117	5,256
2003	Total Tonnage	27,832	101,990	67,394			1,602	198,818
	Total Trucks	702	3,003	2,202			87	5,994
2002	Total Tonnage	27,315	132,077	93,009			3,083	255,484
	Total Trucks	698	3,913	3,339			218	8,168
2001	Total Tonnage	26,239	99,297	111,506			8,545	245,587
	Total Trucks	688	2,912	4,127			363	8,090
2000	Total Tonnage	21,672	66,609	25,068			12,031	125,380
	Total Trucks	557		3,402				3,959
1999	Total Tonnage	3,356	41,453				12,399	57,208
	Total Trucks	85		1,759				1,844
1998 <sup>(3)</sup>	Total Tonnage	4,220	73,712				4,056	81,988
	Total Trucks	112		2,431				2,543

The number of trucks indicated are "loaded truckloads" and therefore represents one-way traffic. To determine the total truck traffic these numbers should be multiplied by 2.

(1) Winter road data provided by the Tibbitt to Contwoyto Winter Road Joint Venture. Road is typically open during most of January to March.

2007 season	70 days (January 28 - April 8)
2006 season	50 days (February 5 - March 26)
2005 season	70 days (January 26 - April 5)
2004 season	64 days (January 28 - March 31)
2003 season	61 days (February 1 - April 2)
2002 season	81 days (January 26 - April 16)
2001 season	72 days (February 1 - April 13)
2000 season	65 days (January 29 - April 3)
1999 season	58 days (February 1 - March 30)
1998 season	76 days (January 19 - April 4)

Notes: BHP Diamond Mines Ekati Mine went into production in October of 1998. Diavik Diamond Mine began construction of the mine site in 2000.

(2) Climatically, 2006 was one of the warmest winters on record. Winter road never reached full load bearing capacity.

(3) For data preceeding 1998, please see Appendix B "Historical Data"

Refer to Figure 1 for the location of this winter road

Percent increase from 1998 to 1999 = 0.5% (Arterial increase = -0.2%; Collector increase = 1.6%)  
 Percent increase from 1999 to 2000 = 1% (Arterial increase = 1.7%; Collector increase = -0.2%)  
 Percent increase from 2000 to 2001 = 1.9% (Arterial increase = 3.1%; Collector increase = -0.1%)  
 Percent increase from 2001 to 2002 = 6.5% (Arterial increase = 7.6%; Collector increase = 4.8%)  
 Percent increase from 2002 to 2003 = 0.9% (Arterial increase = 0.9%; Collector increase = 1%)  
 Percent increase from 2003 to 2005 = 4.3% (Arterial increase = 4.3%; Collector increase = 4.3%)  
 Percent increase from 2005 to 2006 = 6.8% (Arterial increase = 12.7%; Collector increase = -3%)

Average annual percent increase from 1998 to 2006 = 3% (Arterial increase = 4.2%; Collector increase = 1.1%)

**Vehicle Kilometres Travelled (VKT)** is a unit for measuring the amount of traffic on a road. It is calculated by multiplying the AADT by the length of the road. I.E. (number of vehicles)(number of kilometres assumed driven)=vehicle kilometres travelled. VKT indicates usage of a road and is typically used to calculate collision rates.

- Note:
- (1) A commercial vehicle is any vehicle with a GVW over 4500 kg
  - (2) Overweight and Overdimension permits are issued for a single trip
  - (3) All commercial vehicles in the Northwest Territories must register at the scale. Registration for NWT carriers is valid for one year. Non-NWT carriers may purchase registration for periods of 1-12 months
  - (4) Fuel Tax Permits are issued to all carriers transporting bulk fuel purchased outside the Northwest Territories
  - (5) Some 2001 data was unavailable
  - (6) Prior to 2003, combination overweight and overdimension permits were counted as one overdimension permit only. Currently, they are counted as one overdimension permit and one overweight permit.

**Historical Data**

The Department has been actively collecting data since its formation in 1989. This Traffic Report shows the current state of the system only, however the following historical data is available:

- **Short-term Visual Counts** – Vehicles are classified and counted manually at various highway junctions throughout the territory. The data is used to enhance vehicle classification and AADT calculations.
- **Short-term Intersection Volume Counts** – Vehicles are counted by direction and turning movement, which gives an indication of overall traffic flow at selected intersections on the highway system.
- **Historical AADT** – Average daily traffic, broken down by month and year, is also available from 1989 through to 1992. AADT from 1993 through to the present is located in Table 3.

The Department will provide the above data upon request. Please refer to the acknowledgements section in the front of this report for contact information.

## **Appendix B**

### **Data Processing Methodology**

## Data Processing Methodology

The primary goal in traffic data collection is to determine Average Annual Daily Traffic (AADT). The most concise way of doing this is to collect traffic data at a site for a year, sum the traffic counts over the year and then divide by 365 days. However, for a number of reasons including routine maintenance, breakdowns and faulty data modules, no counter runs at 100% operational capacity for an entire year. Therefore, adjustments must be made for gaps in the data.

Three steps are involved in the processing of traffic data. Step one is to fill in as much missing data as possible for the year in question. Step two involves applying an AADT formula to the data and step three consists of independently verifying the calculated AADT through other sources and previous experience. The following steps outline this process in more detail:

### Step One

- If less than one week of data is missing, an average of the hourly count in the week prior and the week following is calculated and applied to the missing data.
- If over one week of data is missing but less than a month, the first step is to obtain the data from the previous year. If the data cannot be found, an average of the first prior week and the first following week is calculated and applied to the missing data.
- If over one month of data is missing, data from previous years is applied through a growth rate algorithm. The results are analysed for accuracy and completeness through comparisons with other traffic counter sites, data from other sources and previous experience.
- Growth rate is determined at each site by comparing available monthly average daily traffic from year to year and averaging over the last four years.

### Step Two

- AADT is determined using an industry standard American Association of State Highway and Transportation Officials (AASHTO) formula (see below). After step one is applied there is a strong possibility that there will still be incomplete data for the year. The AASHTO formula directly accounts for missing data by computing an average of averages.

$$AADT = \frac{1}{7} \sum_{i=1}^7 \left[ \frac{1}{12} \sum_{j=1}^{12} \left( \frac{1}{n} \sum_{k=1}^n VOL_{ijk} \right) \right]$$

Where: Vol = daily traffic for day k, of day-of-week i, and month j  
i = day of the week  
j = month of the year  
k = 1 when the day is the first occurrence of that day of the week in a month, 4 when it is the fourth occurrence.  
n = the number of days of that day of week during that month (usually between 1 and 5, depending on the number of missing data).

### **Step Three**

- Calculated AADT numbers are compared against previous years' values, other sources of traffic information such as ferry logs and Lupin Winter Road logs, upstream and downstream counter sites and previous experience.
- If results of the AADT algorithms are deemed inaccurate at a particular site, the AADT for the year will be estimated by applying an appropriate growth rate to the previous year's AADT.

*Note:* For counters located on access roads and winter roads no extra information is introduced. Only the data collected in the current year is presented.

For more detailed information, please contact the Planning and Policy Division of the Department of Transportation as listed in the Acknowledgements section of this report.
