

Camp Morton Provincial Park

Proposed Changes to Park Boundary

Manitoba Conservation proposes:

To reduce the park boundary parallel to Provincial Trunk Highway (PTH) 8 by 7.2 metres to allow upgrades to the highway.

Background

The proposed upgrading will widen the highway and make related improvements. The highway upgrades will help to improve the overall safety for motorists.

Initial environmental reviews in 1994 and 2002 concluded that any potential environmental impacts of the project are insignificant. For this reason, the project does not require an *Environmental Act* License from the Environmental Approvals Branch of Manitoba Conservation.

The proposed highway improvements are planned for the extreme western edge of the park, and are not expected to have any adverse impact on the park or recreational activities within the park.
