

MI Researchers Showcased

Take one fisheries scientist and two marine safety centres and you have the three remarkable stories about applied research and development happening right here at the Marine Institute.

Dr. Scott Grant of MI's Centre for Sustainable Aquatic Resources and the institute's Centre for Marine Simulation and the Offshore Safety and Survival Centre have been showcased in the 2003-2004 Memorial University Research Report.

The annual report provides an overview of the diverse range of research ideas being explored at Memorial and highlights the progress it has made towards its research targets, and its contributions to the community.

To read more about the dynamic research initiatives undertaken by the Institute, visit
