

**This is a Call for Titles and Abstracts for ACCESS 2006.**

Atlantic Canada Coastal and Estuarine Science Society (ACCESS) Workshop and Annual General Meeting.

University of New Brunswick,  
Fredericton, New Brunswick  
16 to 18 May 2006

The 2006 ACCESS workshop and Annual General Meeting is being held in conjunction with a symposium organized by the Canadian Rivers Institute (at no extra cost). The ACCESS meeting will take place on the 16th and 17th May.

The Canadian Rivers Institute will hold a symposium on the 18th of May. The symposium is tentatively titled: "Rivers are connected to the sea - and it does matter"

The 2006 ACCESS theme is:

"The connectivity of Maritime aquatic habitats". We are accepting titles and abstracts for oral presentations or posters on four topics:

- (1) The trials and tribulations of estuary and lagoon living
- (2) Life goes on: beyond the barrier islands (the coastal zone to the edge of the shelf)
- (3) Aquaculture: the good, the bad, and the ugly.
- (4) Open

ACCESS is an affiliate society of the Estuarine Research Federation (ERF's Journal is "Estuaries"). As in the past, we are soliciting reports on original research, policy issues, social and management issues, and their interactions. We are particularly interested in having students present their work and, as motivation; there will be cash awards for the best oral and poster presentations.

Send titles by 30 March 2006 and abstracts by 21 April 2006 to:

Dr. David Methven
