## Preface

The Department of Natural Resources would like to acknowledge that the greater part of the information presented in this handbook was obtained from Statistics Canada surveys and publications. Furthermore, we would like to acknowledge deeply the efforts of farmers, processors and others associated with the agriculture industry, who by their co-operation through surveys and censuses, made this information available. It must be said that without the co-operation of these people, this publication would not have been possible.

The Production and Marketing Division welcomes any suggestions for improvement of this publication. Additional information may be obtained by contacting the Department of Natural Resources or Statistics Canada.

# **Agrifoods Review**

## **Primary Sector**

The value of the agriculture industry grew 2.4% to \$83.1 million in 2003. Leading the growth were the vegetable and egg sectors which increased 15% and 10% respectively.

Growing conditions in 2003 resulted in improved yields of potatoes and other vegetables. Indeed, reported potato yields were 30% higher than in 2002. An 11% increase in sales volume combined with higher prices pushed the value of egg production to a 10 year high in 2003. Gains in production value were also observed in Floriculture & Nursery (+4%), Sheep & Lambs (+17%), and Chicken (+4%) sectors.

The cattle and farmed fruits sectors experienced significant declines over the past year. The cattle sector decreased 37% primarily due to the adverse impact of the discovery of BSE in Alberta. Prices offered to producers fell to one-fifth of the pre-BSE price. For many producers the price offered did not cover the cost of shipping animals to market.

The decrease in the farmed fruit sector was mainly due to lower production levels for strawberries. Reduced area in production coupled with lower yields resulted in a 50% drop in strawberry production.

Paid employment reached it's peak in April at 2,100 persons. The average monthly employment matched it's 10 year high of 1,600 persons.

## **Secondary Sector**

Food and beverage manufacturing shipments, excluding sea-foods, grew 4% to \$395 million in 2003. Growth in the beverage sector continued to outperform the food sector and now accounts for 54% of the industry value.

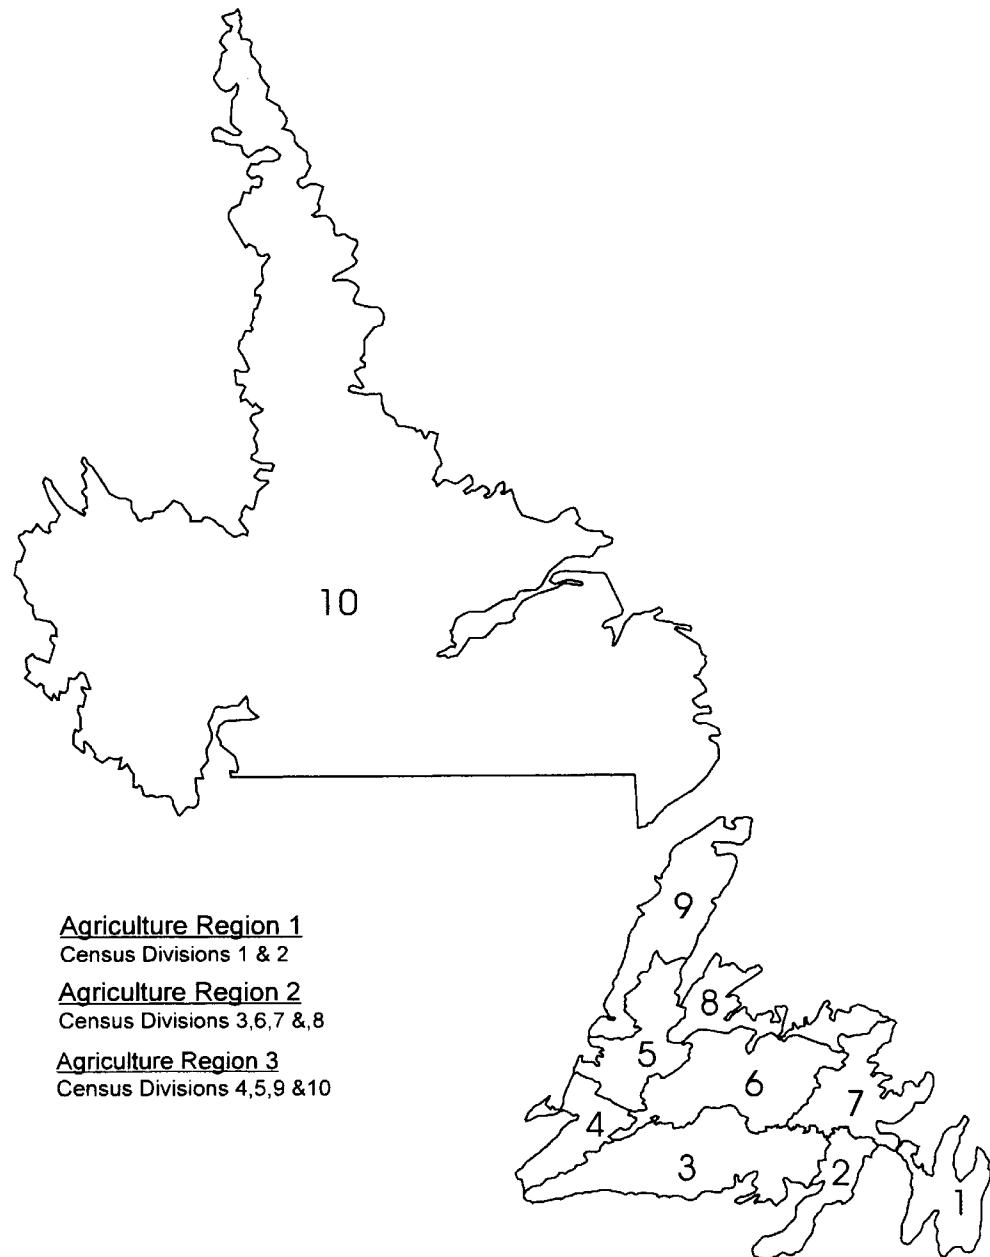

Average monthly employment was on par with 2002 at 1,700 persons. Peak employment occurred in May at 2,100 persons.

## **Agricultural Policy Framework**

In May 2003, Newfoundland and Labrador became the first province in Canada to sign an Agricultural Policy Framework (APF) agreement with the federal government. The APF is a 60/40 cost-shared federal/provincial initiative designed to address the challenges and opportunities in the agrifoods industry by focussing on the following: Business Risk Management, Environment, Food Safety and Quality, Science & Innovation and Renewal. More than \$32 million will be spent in the first five years of the program.
