

Supplement to *Arctic* available Spring 2012

The Archaeology and Paleoecology of Alpine Ice Patches:
A Global Perspective

From the Introduction:

“...this special supplement of the journal *Arctic*...brings together 12 articles in the emerging field of alpine ice patch archaeology from North America and Europe. Linked by their association with either caribou or reindeer hunting or human travel in alpine environments, these articles provide a fascinating perspective on the cryogenically preserved artifacts and biological specimens being revealed by the melting of perennial snow and ice in high alpine settings...

As a group, the papers in this volume suggest that the phenomenon of ice patch hunting could exist anywhere where humans and caribou or reindeer interacted at some point in the past in an alpine environment; the northern Rockies, Torngats, Baffin Mountains, the Pyrenees, the Altai, and the Urals, among others, all seem like mountain environments with high potential. With this in mind, perhaps the greatest contribution this collection of papers has to offer is inspiration.”

Supplement issue is included in 2012 membership fee, so why not join AINA and receive all four regular issues of *Arctic* in addition to the supplement!
