Introduction

The 2017–2018 Five Year Highway Improvement Plan maps out government's approach to repairing and maintaining the province's 23,000 kilometres of roads and highways and 4,100 bridges. The plan outlines major highway and road projects, repaving, major bridge replacements, capital maintenance and infrastructure work the province plans to pursue year by year, over the next five years.

Sharing the specific plans for road improvement in the Five Year Highway Improvement Plan gives private companies better opportunity to prepare for the more than 150 upcoming highway improvement projects in coming fiscal year. It also helps to inform Nova Scotians about the improvements being made in their communities.

Pavement Preservation

Unlike many other provinces, the Province of Nova Scotia is responsible for maintaining the majority of all public roads in the province (90 per cent). The cost per kilometre is over \$300,000 to repave, \$500,000 to \$750,000 or more to upgrade a trunk highway, and \$3-5 million to twin a highway. While severely damaged roads will continue to be addressed, a portion of our highway improvement budget will be set aside to help improve paved roads before they become too damaged and need more costly repairs. The approach is ensuring that funding is used more efficiently and effectively. It is more sustainable in the long term.

Pavement Preservation is cost effective. Spending \$1 on pavement preservation before a paved road is 15 years old can eliminate or delay having to spend \$6 to \$14 on rehabilitation or reconstruction when the pavement surface has failed.

Preservation techniques can extend the life of asphalt, improve smoothness, reduce potholes and decrease rutting and cracking. Roads stay smoother and safer at a much lower cost than by allowing them to deteriorate to the point of needing full reconstruction.

Economic Impact

The road building industry in Nova Scotia is a large source of jobs, creating an estimated 5,000 direct and 2,500 indirect positions every year. The annual payroll for Nova Scotians employed in road building is approximately \$300 million. For instance, a typical \$2 million paving contract generates about 60 direct jobs and about \$200,000 worth of business for the trucking industry and spin-off benefits for local businesses that provide the associated construction materials, technical support and supplies used by contractors.

The total highway capital budget for 2017–2018 is \$215 million. Additional operational funding for highway maintenance will be made available as part of the 2017–2018 budget.

Highway 104, Antigonish

Capital funding for highway construction and maintenance currently comes from three sources:

1. Provincial – Highway funding in Nova Scotia includes all revenues collected through provincial gas taxes and registration of motor vehicles, as well as other funding provided by the provincial government.

Every dollar from Registry of Motor Vehicle fees and the gas tax goes back into provincial roads. Over the past 4 years, the province invested \$332 million above and beyond what was collected in RMV fees and gas tax. This year, the department forecasts spending \$32 million more than what was collected.

2. Federal – Federal funding to support highway improvement projects will be provided by the Building Canada Plan and the New Build Canada Fund. The province will continue work with its Federal partners to take advantage of opportunities for support where possible.

3. Municipal – Municipalities contribute on cost-shared projects in their areas.

The department has also undertaken a comprehensive study and consultation on the feasibility of using alternative funding models such as tolls to enhance the highway system sooner. The province would only move forward with tolling if the public indicates they want government to proceed.

How Capital Funding is Invested

Major Construction (new Highway and Bridges)	\$65 million
Asphalt and Resurfacing	\$101 million
Bridge Replacement/Rehabilitation	\$32 million
Land Purchases	\$7 million
Equipment, Machinery, Ferries	\$8 million
Highway Design, Studies, Surveys	\$2 million
Total Funding:	\$215 million

The following tables list major construction and asphalt paving projects on 100-series highways, trunks and routes, plus major bridge replacements and rehabilitations for the next five years. Local roads, pavement preservation and double chip resurfacing are also included for 2017-18.

This plan can change, including project descriptions, as there are many steps to maintaining and building roads and bridges and each step affects the next.
