The radioactive waste proposals are convincing arguments that nuclear generation is too dangerous. Reports are surfacing within the nuclear industry that Fukushima will take 1000 years to play out but will result in the death of all life on our planet. It is doubtful Canadian children will get special treatment to inhabit other planets simply because their great...great...ancestors allowed the planet to die an unnatural death. Our leaders think we can escape to somewhere else ... sounds like madness to think that it is possible.

For the sake of the future, outlaw the production of radioactive wastes and incrementally begin a crash clean-up.
