

Interested in the design of Long Term Care homes?

We are reaching out to **front line workers** to design better environments to support the quality of life of residents and staff during COVID-19 and future infectious outbreaks.

Our Research Question...

We are interested in understanding how the design of your home and infection prevention and control measures are impacting your daily work experience or the experience of your colleagues. How might we rethink the design of homes to improve your work experience during the pandemic or future infectious outbreak conditions?

Who is Eligible to Join Our Team...

Are you a **staff member** with front line experience in infection prevention and control, likes to design and wants to improve your working conditions and the living conditions of residents?

What You Will Be Asked to Do...

Between **January to June 2021** we'd like you to take part in...

- a 4 hr. photo diary study, capturing how the design of your space is affecting your ability to practice infection prevention and control
- a 1 hr. focus group where we'll talk about what you've found and your ideas for improvement
- three co design sessions (4 hrs. total) where we'll generate new home designs

Interested in taking part in this study?
