

Epidemiologic Summary

COVID-19 in Ontario: January 15, 2020 to March 30, 2020

This report includes the most current information available from the integrated Public Health Information System (iPHIS) as of 4 p.m. March 30, 2020.

Purpose

- This daily report provides an epidemiologic summary of COVID-19 activity in Ontario to date.

Highlights

- There are 1,966 confirmed cases of COVID-19 in Ontario reported to date in iPHIS. This represents an increase of 260 confirmed cases from the previous report.
 - 49.8% of cases are male, 49.5% are female.
 - The median age is 50, ranging in age from <1 to 100 years of age.
 - Greater Toronto Area public health units account for 59.1% of cases.
- Of all cases, 25.7% had travelled in the 14 days prior to becoming ill, 10.2% had close contact with a confirmed case, 16.8% had neither and 47.3% have exposure information pending.
- 10.9% of cases were hospitalized and 27 deaths have been reported (please note there may be a reporting delay for deaths in iPHIS).

Case Characteristics

Table 1. Summary of cases of COVID-19: Ontario, January 15, 2020 to March 30, 2020

	Number	Percentage
Number of cases	1,966	N/A
Change from previous report	260	15.2% increase
Male	980	49.8
Female	974	49.5
Age group		
19 and under	46	2.3
20-64	1,496	76.1
65 and over	421	21.4

Note: Twelve cases did not specify male or female gender. The age of three cases were unknown.

Data Source: integrated Public Health Information System (iPHIS) database

Time

Figure 1. Confirmed cases (n=1,966) of COVID-19 by episode date and exposure: Ontario, January 15, 2020 to March 30, 2020

Note: Travel-related refers to travel within the 14 days prior to becoming ill.

Data Source: integrated Public Health Information System (iPHIS) database

Exposure

Table 2. Confirmed cases (n=1,966) of COVID-19 by exposure type: Ontario, January 15, 2020 to March 30, 2020

	Number	Percentage
Travel*	505	25.7
Contact of a confirmed case	201	10.2
Neither	331	16.8
Information pending	929	47.3

* Travel within the 14 days prior to becoming ill; travel locations are provided in [Appendix A](#).

Data Source: integrated Public Health Information System (iPHIS) database

Severity

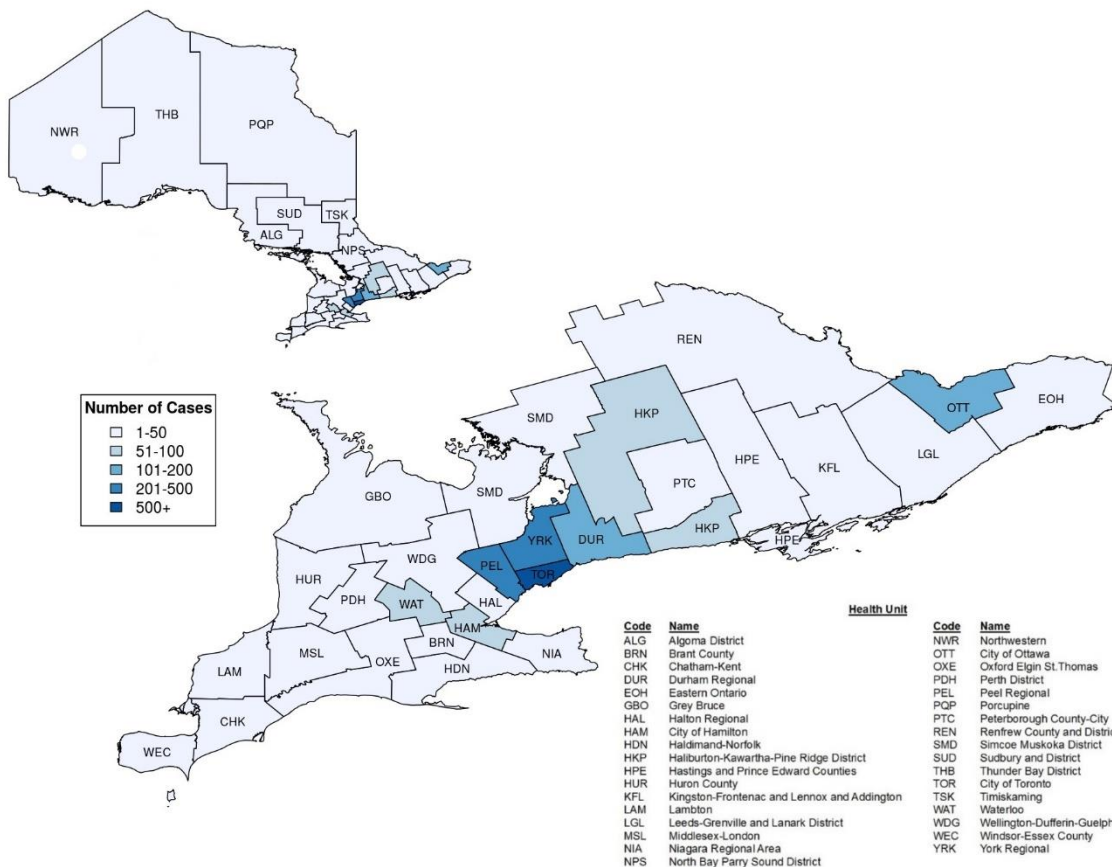

Table 3. Confirmed cases (n=1,966) of COVID-19 by severity: Ontario, January 15, 2020 to March 30, 2020

	Number	Percentage
Cumulative hospitalized	215	10.9
Cumulative intensive care	75	3.8
Cumulative deaths reported (please note there may be a reporting delay for deaths in iPHIS)	27	1.4

Data Source: integrated Public Health Information System (iPHIS) database

Geography

Figure 2. Confirmed cases (n=1,966) of COVID-19 by public health unit: Ontario, January 15, 2020 to March 30, 2020

Data Source: integrated Public Health Information System (iPHIS) database

Technical Notes

Data Sources (Case Data)

- The data for this report were based on information extracted from the Ontario Ministry of Health (MOH) integrated Public Health Information System (iPHIS) database, as of **March 30, 2020 at 4 p.m.**
- iPHIS is a dynamic disease reporting system, which allows ongoing updates to data previously entered. As a result, data extracted from iPHIS represent a snapshot at the time of extraction and may differ from previous or subsequent reports.

iPHIS data caveats:

- The data only represent cases reported to public health and recorded in iPHIS. As a result, all counts will be subject to varying degrees of underreporting due to a variety of factors, such as disease awareness and medical care seeking behaviours, which may depend on severity of illness, clinical practice, changes in laboratory testing, and reporting behaviours.
- Only cases meeting the confirmed case classification as listed in the MOH [COVID-19 case definition](#) are included in the report counts.
- Cases in this dataset are reported based on the Accurate Episode Date (displayed as episode date in graphs). This is a calculated field used when extracting data from iPHIS. The field uses a number of dates entered in iPHIS to provide an approximation of onset date.
- Orientation of case counts by geography is based on the diagnosing health unit (DHU). DHU refers to the case's public health unit of residence at the time of illness onset and not necessarily the location of exposure. Cases for which the DHU was reported as MOH (to signify a case that is not a resident of Ontario) have been excluded from the analyses.
- Exposure type is determined by examining the exposure and risk factor fields from iPHIS to determine whether a case travelled, was a contact of a case or neither. A hierarchy has been applied as follows: Travel-related > Close contact of a confirmed case > Neither > Information pending.
- Cases for which the Disposition Status was reported as ENTERED IN ERROR, DOES NOT MEET DEFINITION, DUPLICATE-DO NOT USE, or any variation on these values have been excluded.

Appendix A

Confirmed cases (n=505) of COVID-19 with travel history* by location: Ontario, January 15, 2020 to March 30, 2020

Location travelled to**	Cases
United States	151
United Kingdom	51
Cruise	40
Germany	22
Spain	19
Austria	17
Iran	17
Philippines	15
Mexico	14
France	13
Egypt	12
India	8
Switzerland	8
Cuba	5
Netherlands	5
Peru	5
Portugal	5
British Columbia	4
China	4

Location travelled to**	Cases
Italy	4
United Arab Emirates	4
Bahamas	3
Colombia	3
Costa Rica	3
Ireland	3
Jordan	3
Morocco	3
Pakistan	3
Singapore	3
Barbados	2
Bolivia	2
Denmark	2
Israel	2
Panama	2
Quebec	2
Turkey	2
Alberta	1
Aruba	1
Brazil	1
Dominican Republic	1
Ecuador	1

Location travelled to**	Cases
Hong Kong	1
Jamaica	1
Japan	1
New Zealand	1
Russian Federation	1
Saskatchewan	1
South Africa	1
South Korea	1
State of Palestine	1
Sweden	1
Tahiti	1
Trinidad And Tobago	1
Viet Nam	1

* Travel within the 14 days prior to symptom onset.

** Cases may report travel exposures for more than one country or may report travel as a risk factor without specifying the location.
