

Epidemiologic Summary

COVID-19 in Ontario: January 15, 2020 to April 20, 2020

This report includes the most current information available from the integrated Public Health Information System (iPHIS) as of **4 p.m. April 20, 2020** and from the Toronto Public Health Coronavirus Rapid Entry System (CORES) as of **2 p.m. April 20, 2020**.

Purpose

- This daily report provides an epidemiologic summary of COVID-19 activity in Ontario to date.

Highlights

- There are 11,735 confirmed cases of COVID-19 in Ontario reported to date in iPHIS. This represents an increase of 551 confirmed cases from the previous report.
 - 42.2% of cases are male, 56.8% are female.
 - 43.8% of cases are 60 years of age and older.
 - Greater Toronto Area public health units account for 58.7% of cases.
 - 11.9% of cases were hospitalized.
- 622 deaths have been reported (please note there may be a reporting delay for deaths in iPHIS). This is an increase of 38 deaths from the previous report.
- 121 outbreaks have been reported in long-term care homes. This is an increase of 7 outbreaks from the previous report.
- 273 deaths have been reported among residents/patients in long-term care homes. This is an increase of 24 deaths from the previous report.

Case Characteristics

Table 1. Summary of cases of COVID-19: Ontario, January 15, 2020 to April 20, 2020

	Number	Percentage
Number of cases*	11,735	N/A
Change from previous report	551	4.9% increase
Gender: Male	4,955	42.2
Gender: Female	6,663	56.8
Ages: 19 and under	260	2.2
Ages: 20-39	2,657	22.6
Ages: 40-59	3,665	31.2
Ages: 60-79	2,687	22.9
Ages: 80 and over	2,457	20.9
Number of cases in health care workers	1,368	11.7

* Cases and rates by public health unit are provided in [Appendix A](#).

Note: 117 cases did not specify male or female. Nine cases had an unknown age.

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

Time

Figure 1. Confirmed cases (n=11,735) of COVID-19 by reported date: Ontario, January 15, 2020 to April 20, 2020*

*Interpret case counts for the most recent days (approximately 3 days) with caution due to reporting lags.

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

Figure 2. Confirmed cases (n=11,735) of COVID-19 by an approximation of symptom onset date*: Ontario, January 15, 2020 to April 20, 2020**

*This date, referred to as episode date, is intended to approximate symptom onset date. It is calculated based on either the date of symptom onset, specimen collection/test date, or the date reported to public health.

**Interpret case counts for the most recent days (approximately 14 days) with caution due to reporting lags.

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

Figure 3. Confirmed deaths (n=617*) among COVID-19 cases by date of death: Ontario, January 15, 2020 to April 20, 2020**

*This count excludes the 5 cases that did not have a date of death reported.

**Interpret case counts for the most recent days with caution due to reporting lags.

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

Exposure

Table 2. Confirmed cases (n=11,735) of COVID-19 by exposure type: Ontario, January 15, 2020 to April 20, 2020

	Number	Percentage
Travel*	1,259	10.7
Close contact of a confirmed case	2,037	17.4
Community transmission	3,575	30.5
Information pending	4,864	41.4

*Travel within the 14 days prior to becoming ill.

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

Severity

Table 3. Confirmed cases (n=11,735) of COVID-19 by severity: Ontario, January 15, 2020 to April 20, 2020

	Number	Percentage
Cumulative deaths reported (please note there may be a reporting delay for deaths in iPHIS)	622	5.3
Change from previous report	38	6.5% increase
Deaths reported in ages: 19 and under	0	0
Deaths reported in ages: 20-39	1	0
Deaths reported in ages: 40-59	32	0.9
Deaths reported in ages: 60-79	172	6.4
Deaths reported in ages: 80 and over	417	17
Cumulative intensive care*	368	3.1
Cumulative hospitalized*	1,394	11.9
Number of resolved** cases	5,806	49.5

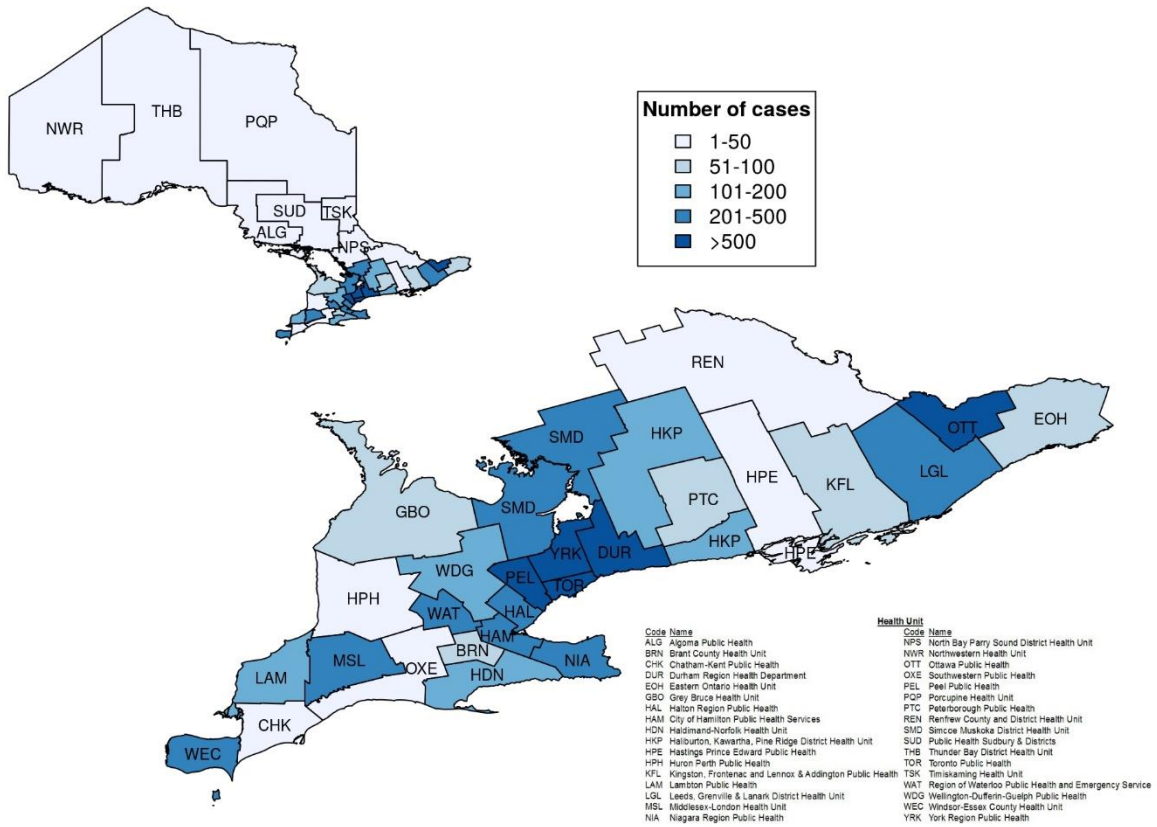

* These refer to all hospitalized or ICU admitted cases, not cases that are currently hospitalized or in ICU.

** Cases that are 14 days past symptom onset (if available) or 14 days past the episode date are classified as resolved for non-fatal cases that are not currently listed as hospitalized. Cases are also classified as resolved if the case is reported as “recovered” in iPHIS.

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

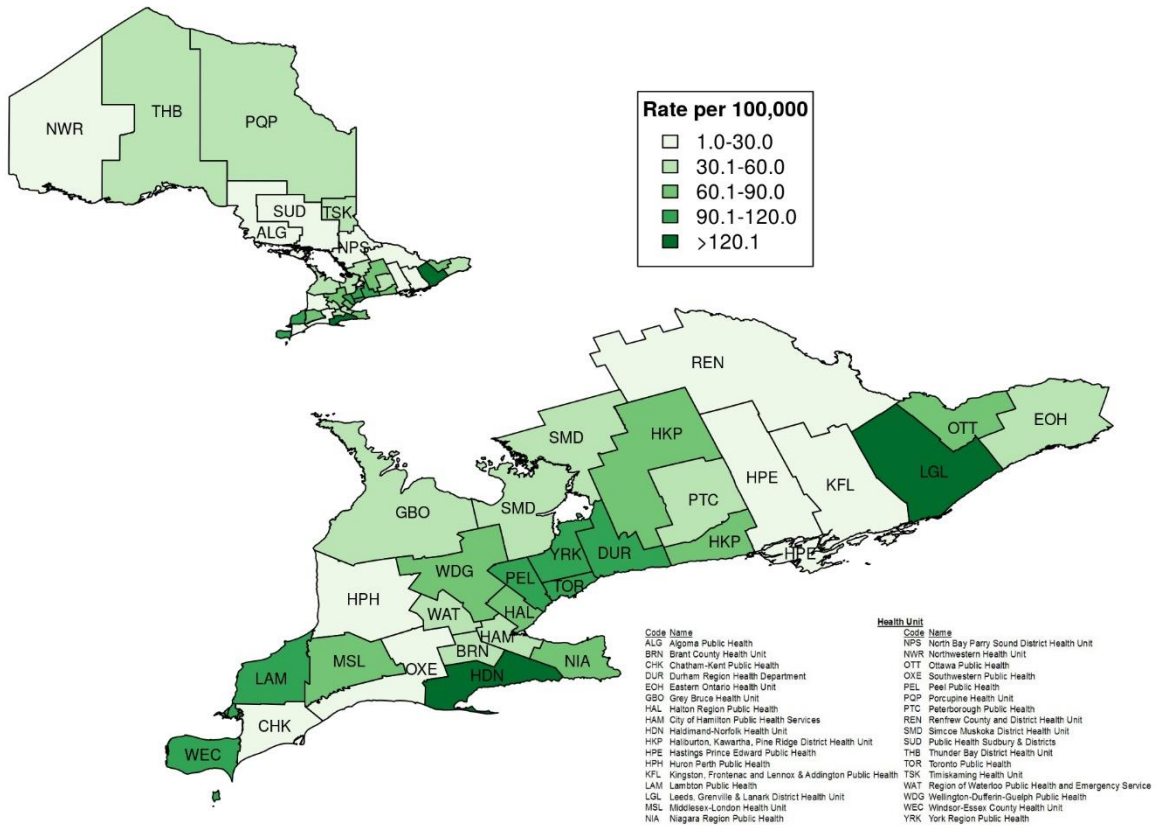

Geography

Figure 4. Confirmed cases (n=11,735) of COVID-19 by public health unit: Ontario, January 15, 2020 to April 20, 2020

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

Figure 5. Rate of confirmed cases of COVID-19 by public health unit: Ontario, January 15, 2020 to April 20, 2020

Data Source: integrated Public Health Information System (iPHIS) database, Coronavirus Rapid Entry System (CORES) database.

Outbreaks in Institutions and Public Hospitals

Table 4. Confirmed COVID-19 outbreaks reported in long-term care homes and hospitals and total number of associated cases: Ontario, January 15, 2020 to April 20, 2020

Indicator	Long-Term Care Homes	Hospitals
Number of confirmed COVID-19 outbreaks	121	34
Total number of cases*, ** reported as part of the confirmed COVID-19 outbreaks	2,069	263
Cases reported among residents/patients	1,394	149
Cases reported among staff	671	112
Total number of deaths*, ** reported as part of the confirmed COVID-19 outbreaks	274	14
Deaths reported among residents/patients	273	14
Deaths reported among staff	1	0

*Includes all outbreak-related cases and deaths reported in aggregate outbreak summary counts, regardless of whether the case was laboratory confirmed (deaths among non-laboratory confirmed cases reported here are not included in Table 3).

**May include cases and deaths other than residents/patients or staff, such as volunteers. As a result, the total number of cases and deaths may be greater than the number of cases and deaths reported in residents or staff.

Data Source: integrated Public Health Information System (iPHIS) database.

Technical Notes

Data Sources (Case Data)

- The data for this report were based on information extracted from the Ontario Ministry of Health (MOH) integrated Public Health Information System (iPHIS) database, as of **April 20, 2020 at 4 p.m.** and data extracted from the Toronto Public Health (Coronavirus Rapid Entry System) CORES, as of **April 20, 2020 at 2 p.m.**
- iPHIS and CORES are dynamic disease reporting systems, which allows ongoing updates to data previously entered. As a result, data extracted from iPHIS and CORES represent a snapshot at the time of extraction and may differ from previous or subsequent reports.
- Ontario population projection data for 2020 were sourced from Ontario Ministry of Health, IntelliHEALTH Ontario. Data were extracted on November 26, 2019.

Data Caveats:

- The data only represent cases reported to public health and recorded in iPHIS and CORES. As a result, all counts will be subject to varying degrees of underreporting due to a variety of factors, such as disease awareness and medical care seeking behaviours, which may depend on severity of illness, clinical practice, changes in laboratory testing, and reporting behaviours.
- Lags in iPHIS and CORES data entry due to reduced holiday and weekend staffing may result in lower case counts than would otherwise be recorded.
- Only cases meeting the confirmed case classification as listed in the MOH [COVID-19 case definition](#) are included in the report counts from iPHIS or CORES.
- Case episode date is based on an estimate of the best date of disease onset. This date is calculated based on either the date of symptom onset, specimen collection/test date, or the date reported to public health.
- Orientation of case counts by geography is based on the diagnosing health unit (DHU). DHU refers to the case's public health unit of residence at the time of illness onset and not necessarily the location of exposure. Cases for which the DHU was reported as MOH (to signify a case that is not a resident of Ontario) have been excluded from the analyses.
 - GTA health units include: Durham Region Health Department, Peel Public Health, Toronto Public Health and York Region Public Health
- Exposure type is determined by examining the exposure and risk factor fields from iPHIS to determine whether a case travelled, was a contact of a case or neither. A hierarchy has been applied as follows: Travel-related > Close contact of a confirmed case > Community transmission > Information pending.
- Exposure type is determined from CORES by examining the risk factor fields from CORES to determine whether a case travelled, was a contact of a case or neither. A hierarchy has been

applied as follows: Travel-related > Close contact of a confirmed case > Community transmission > Information pending

- Deaths are determined by using the outcome field in iPHIS. Any case marked 'Fatal' is included in the deaths data. Deaths are included whether or not COVID-19 was determined to be a contributing or underlying cause of death as indicated in the iPHIS field Type of Death.
 - The date of death is determined using the outcome date field for cases marked as 'Fatal' in the outcome field.
- iPHIS cases for which the Disposition Status was reported as ENTERED IN ERROR, DOES NOT MEET DEFINITION, DUPLICATE-DO NOT USE, or any variation on these values have been excluded.
- To provide a measure of the impact of COVID-19 on long-term care homes and hospitals, the number of outbreaks and the associated cases are reported. To obtain the case and deaths data for these outbreaks, the aggregate counts recorded by public health units in the outbreak's summary counts section of iPHIS is used. This information is presented in table 4.
 - Previously only a select number of persons in institutional outbreaks would be tested for COVID-19, and there could still be circumstances where not all individuals end up being tested (e.g., the person dies before they can be tested).
 - These counts may not be updated as frequently as the information for laboratory-confirmed cases.
 - The information in the aggregate counts can not necessarily be reconciled with the laboratory-confirmed case data.

Appendix A

Table 1. Confirmed cases (n=11,735) of COVID-19 by public health unit: Ontario, January 15, 2020 to April 20, 2020

Public Health Unit Name	Cases	Rate per 100,000 population
Northwestern Health Unit	13	14.8
Thunder Bay District Health Unit	48	32.0
TOTAL NORTH WEST	61	25.7
Algoma Public Health	12	10.5
North Bay Parry Sound District Health Unit	14	10.8
